A NOTE TO USERS

Changes in this issue:

(1) This month's issue presents a new table on price indexes (Table 29) entitled "Industry Selling Price Indexes". They are a selection of 48 of the more important indexes from a total of 97 which are available and published regularly in "Price and Price Indexes" Cat. No. 62–002, D.B.S. A brief description of the above series is outlined in the above publication and is as follows:

> "Industry Selling Price Indexes are published for most of the manufacturing industries and as such are the first Canadian "wholesale" price indexes to be organized according to an industry classification. Because of their common form of organization these indexes may be used in conjunction with a whole array of related statistics such as shipments, employment and inventories, to name a few, which also conform to the Standard Industrial Classification. Thus, Industry Selling Price Indexes have a clearly defined conceptual basis which fits into a common framework of analytical statistics. For this reason and because of their relatively high standard of representativeness they are recommended over their counterpart commodity series of the General Wholesale Index for purposes relating to output of manufacturing industries. However, because Industry Selling Price Indexes are available only since 1956 (in a few cases since 1949) the General Wholesale Index and its components must still be relied upon for earlier periods."

For a more detailed description of these indexes see Reference Paper "Industry Selling Price Indexes" 1956–59, Cat. No. 62–515, Occasional, D.B.S. and also the Technical Note appearing in the February 1961 issue of the Review.

(2) Due to the addition of the new table above, the present Table 29 on wholesale prices has been reduced from 60 to 16 series. It includes now only the 8 principal components and the 7 special groupings of the general wholesale index. The series which were formerly carried in the Review and are now discontinued are still available in "Price and Price Indexes" as above.

(3) Table 30 "Other Wholesale Price Indexes" includes indexes which are not part of the general wholesale price system. The present Table 30 is similar to the previous Table 29 entitled "Selected Price Indexes" but does not have any of the components of the general wholesale price system, all of which are now found in Table 29.

(4) Former Table 30 "Retail Price Indexes" now Table 31 "Consumer Price Indexes" has been expanded by the addition of five supplementary classifications of the total index, namely total commodities, durables, non-durables, non-durables ex. food and services. A further change in this table is the transfer of the total index of commodities and services used by farmers and the index of equipment and materials to Table 70.

(5) All tables following Table 28 have been renumbered.

SAVING AND INVESTMENT IN CANADA SINCE 1950[1]

Introduction

The publication of estimates of Canada's national accounts for the fourth quarter 1960, contained quarterly figures of national savings and investment in the form of a consolidated saving/investment sector table. The data, which were made available both on an unadjusted basis and at annual rates after allowance for normal seasonal variations for the period 1950 to 1960, had previously been published only on an annual basis.

The importance of such data needs little emphasis and is borne out by the major role which savings and investment play in almost all theories of the business cycle, in the determination of the level of employment and production. Their availability over this shorter time period adds significantly to their usefulness for analysing the behaviour of the economy and for making appropriate policy decisions.

The two sides of the account are always theoretically in balance, as total investment by business, which is defined as final output of the economy less the amount of final goods and services which are consumed in the current period, must equal savings, defined as the income generated by this output less the amount spent on consumption of goods and services. In practice and due to inadequacies in the statistics it is necessary to insert a balancing item, the residual error of estimate in order to equate both sides of the account.

The account which is arranged in terms of the disposition and source of national saving, shows business investment in fixed capital, allocated to new non-residential construction, housing and machinery and equipment, (repair and maintenance expenditures are not treated as capital formation in the Canadian national accounts), and in working capital, allocated to non-farm and farm inventories. In order that the total figure should represent the amount of saving by Canadian nationals, the saving of non-residents made available for investment in Canada is deducted from the total of fixed and working capital formation. In periods during which Canadian saving is being made available to non-residents, this amount is added to the investment figures. The source of saving shows the saving of each sector under the headings of personal net saving, business gross savings, government surplus or deficit and the inventory valuation adjustment.

For certain analytical purposes a rearrangement of the data may be desirable, such as the transfer of non-residents' saving to the source of saving side of the account when interest is being focussed on total business gross domestic investment. For studies of resource allocation it is sometimes convenient to add to business investment, that capital formation undertaken by government, which for both conceptual and statistical reasons is not at present included in the national saving account. At present government capital formation is only published annually and appears as a component of total government expenditure on goods and services in the main tables of the national accounts.

The purpose of this article is to put into perspective, changes in the patterns of saving and investment over the past twelve and a half years, to examine the behaviour of certain components during the three business recessions occurring in this period and to note certain relationships between components of the account.

It should be emphasized that the saving and investment account is intended as an integral part of the national accounts framework and that examination of the account in isolation detracts considerably from its value. It is not possible, for instance to tell from the saving account alone, whether an increase in personal net saving is caused by lower consumption expenditures, or increased income, or by a combination of both, nor whether changes in the government surplus or deficit are due to changes in receipts or expenditures. For such material facts it is necessary to look at other accounts in the system.

The equality of both sides of the saving accounts also serves as a useful check on the plausibility of forecasts of national product built up from independently estimated components — where such estimates yield saving and investment estimates which are unequal, the independently estimated components are incompatable and must be revised.

Before examining the data it is necessary to outline some of the limitations of the figures used. For example, the degree of consolidation which occurs in the saving and investment account conceals the channels through which savings of various sectors flow to ultimate investors; such information is extremely important in considering the implications of various fiscal, monetary and credit policies.

The item personal net saving includes the saving of unincorporated business; because of the difficulties of distinguishing between wages and salaries due to working proprietors for their labour, and interest, profits and rents due to them for the supply of capital, their total net income is treated as personal income and the excess of income after deduction of consumption expenditure and direct taxes is treated as personal net saving. This point is particularly important as personal net saving includes the change in the book value of inventories of unincorporated business, of which farm inventories form a large and volatile element capable of causing sharp changes in saving estimates.

---

[1] For complete historical record of saving and investment from 1950 to 1961 see DBS publication, "National Accounts Income and Expenditure, by Quarters, 1947 - 1961", Catalogue No. 13-519.

The estimates, as noted above, omit government capital formation and in addition to this make no allowance for the purchase of durable goods by individuals for personal use, with the exception of residential dwellings.

In spite of these limitations it is hoped that the following description of patterns in saving and investment will promote a better understanding of the saving account within the framework of the national accounts as well as stimulate further investigation in this dynamic area of the economy.

Role of Investment in Gross National Expenditure Estimates

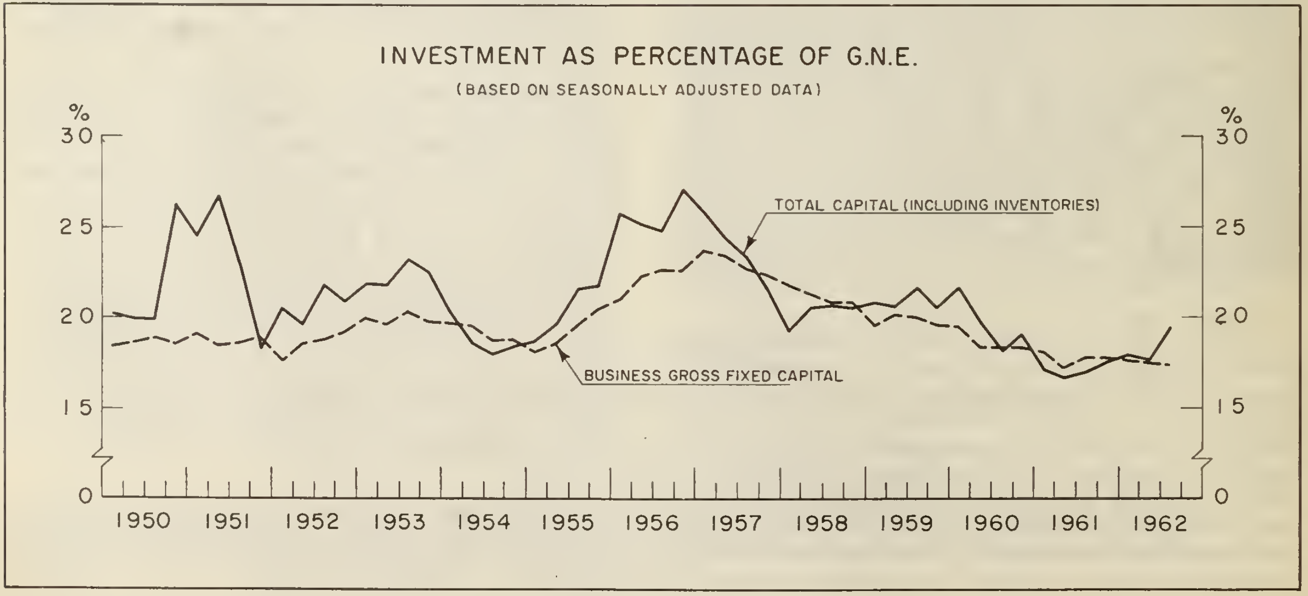
Total investment swung from as high as 27 percent of total GNE in 1951, to as low as 17 per cent in 1961. In the 1950-51 period of economic expansion generated by the outbreak of hostilities in Korea the prospect of shortages and higher prices stimulated both fixed capital formation and inventory accumulation, driving the investment ratio from 20 per cent to a peak of 27 per cent; from mid-1951 the ratio fell sharply and remained between 18 and 22 per cent until 1956-57, when industrial expansion sparked by tremendous additions to productive capacity in the export based resource industries in the face of expanding world demand for Canadian products forced the ratio up to 26 per cent. Since the beginning of 1957 the ratio has declined, until in 1961 it touched 17 per cent, the lowest recorded ratio in the twelve year span. Chart 1 illustrates these movements. It should be noted that the peaks in 1951 and 1956 tend to exaggerate the real increase of capital as during both these periods prices of capital were increasing sharply.

Much of tne pronounced short-term variability in the ratio is a result of changes in inventory investment. In the period 1950-51 the sharp peak in the ratio was due to extensive inventory accumulation taking place as prices rose, output expanded and stock piling took place to avoid bottlenecks and possible shortages, and in the period 1955-56-57, when investment again rose sharply as a percent of GNE, inventory positions were once more being strengthened in line with overall economic expansion.

The ratio of fixed capital displays a much greater degree of stability, and throughout the first half of the fifties remained between 18 and 20 per cent of GNE, rising during the capital boom of 1956-57 to a peak of 23½ per cent early in 1957 and then declining almost uninterruptedly until mid-1961. It has been suggested that as these ratios measure private investment activities only, the decline since 1957 may have been offset by the substitution of government investment type outlays. However, estimates of government capital formation do not bear this out and although government activity in this field was increased sharply since 1957, the increments have not been sufficiently large to offset the decline which has occurred in the private sector. Looking at the historical record, the decline in the ratio in recent years appears to be a return to a more normal level of fixed investment from the exceptionally high levels reached in 1956-57.

The importance of the movements in capital formation can be seen in Chart 2, where both quarterly changes in GNE have been plotted and also changes in total capital formation expressed as a percent of GNE. It can be clearly seen that in general the movements underlying the changes in total GNE are those of capital investment. The slow down in accumulation and the eventual liquidation of inventories in 1951, a similar inventory situation plus the decline in plant and equipment investment in early 1954, and the cyclical declines in 1957-58 and in 1960-61 are reflected quite distinctly in the GNE movements. A more detailed examination of the behaviour of investment components during the business cycles will be examined later.

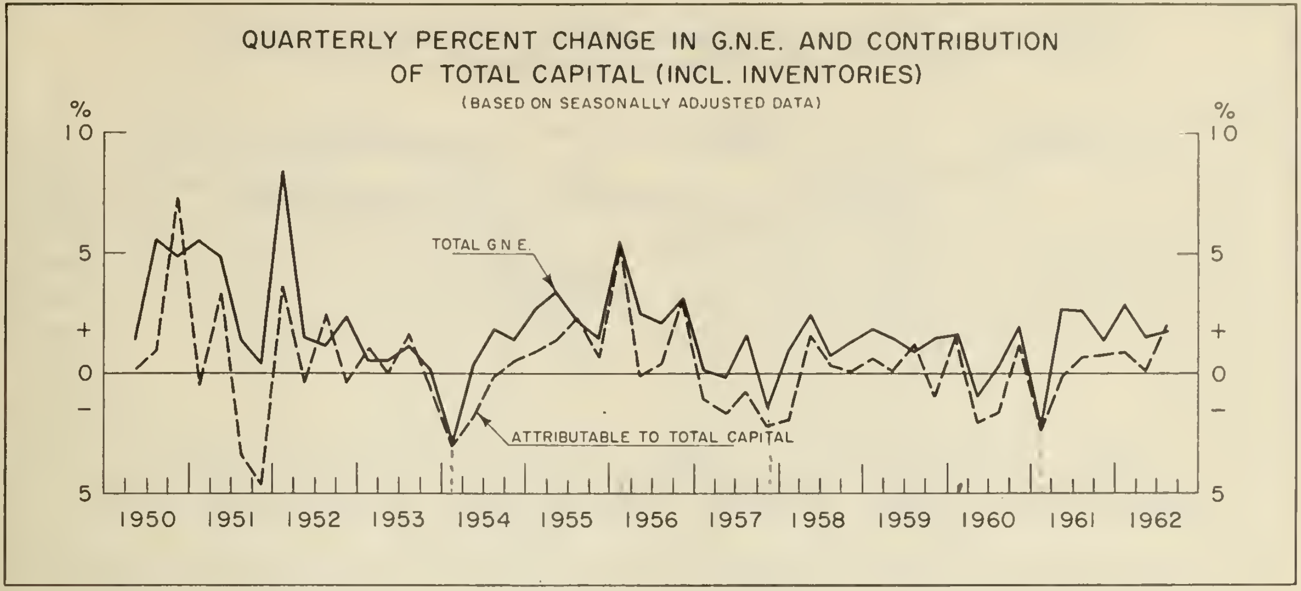
CHART-1



INVESTMENT AS PERCENTAGE OF G.N.E.

(BASED ON SEASONALLY ADJUSTED DATA)

CHART-2



Components of Fixed Capital Investment

Total investment in fixed capital over the whole period 1950 to 1961 amounted to approximately $68 billion of which machinery and equipment were valued at $26.5 billion, non-residential construction at $25.5 billion and housing at almost $16 billion. A greater proportion of current investment is now being channelled into non-residential construction than was the case in the early fifties. This movement in the type of investment has occurred mainly at the expense of machinery and equipment where a decline relative to non-residential construction has been witnessed. A partial explanation for this longer run shift in type of investment would appear to be the relative decline in the importance of the agricultural industry in which investment is preponderantly machinery, and the growing importance of the service and trade industries in which capital formation centres on buildings and structures. Over the twelve year span there seems to be little underlying change in the proportion of investment outlays which are going into housing, although in the shorter run countercyclical movements in housing investment stand out clearly in Chart 3.

CHART-3

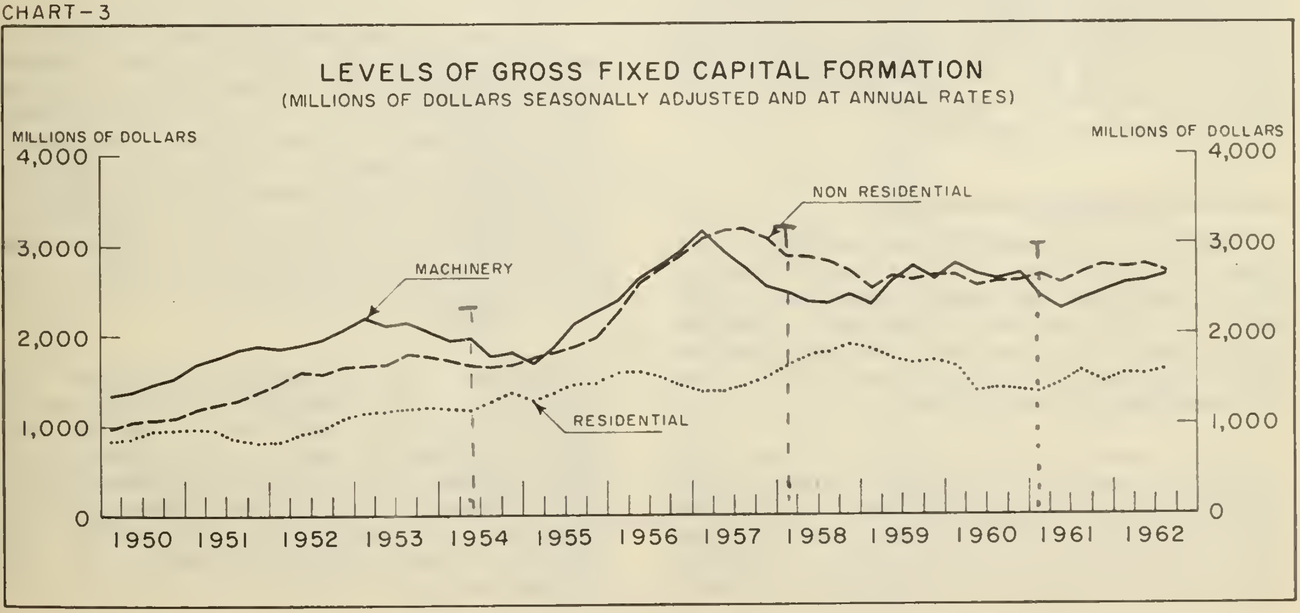


CHART - 4

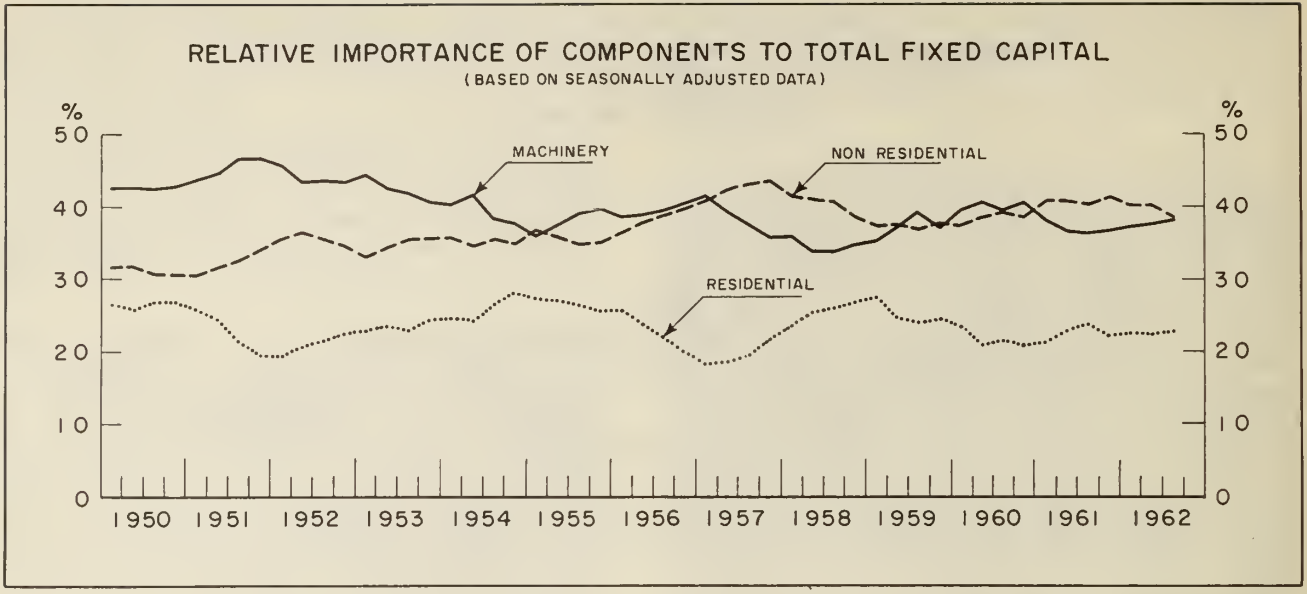


In the period 1950 and 1951 investment in machinery and equipment was absorbing on average about 44 per cent of total fixed capital; at the same time the proportion of resources going into housing declined as plant expansion associated with the Korean War got under way. From 1952 through to 1954 while non-residential construction continued to absorb a stable 35 per cent of fixed investment capital, the proportion going into machinery dropped steadily from 45 per cent to 36 per cent as housing outlays increased sharply. In the capital boom 1955-57 the ratio devoted to housing slipped steadily from 28 to 18 per cent, the lowest level touched in the period covered, while non-residential rose to a peak level of 43 per cent as outlays were particularly heavy in such engineering projects as pipe lines, power developments and waterways. With the 1957-58 recession, housing again began to assume a relatively more important role as plant and machinery investment declined both relatively and absolutely. In the more recent period, changes in the relative importance of the three broad types of fixed capital formation have been less pronounced and since mid-1961 the ratios have been stable.

Industrial Distribution of Investment

Although only annual data are available on the industrial distribution of fixed capital formation these reveal some interesting changes which have taken place in the last twelve years. Both the absolute amount of investment and the proportion that it represents of the total are given for nine main industrial groupings in Chart 5.

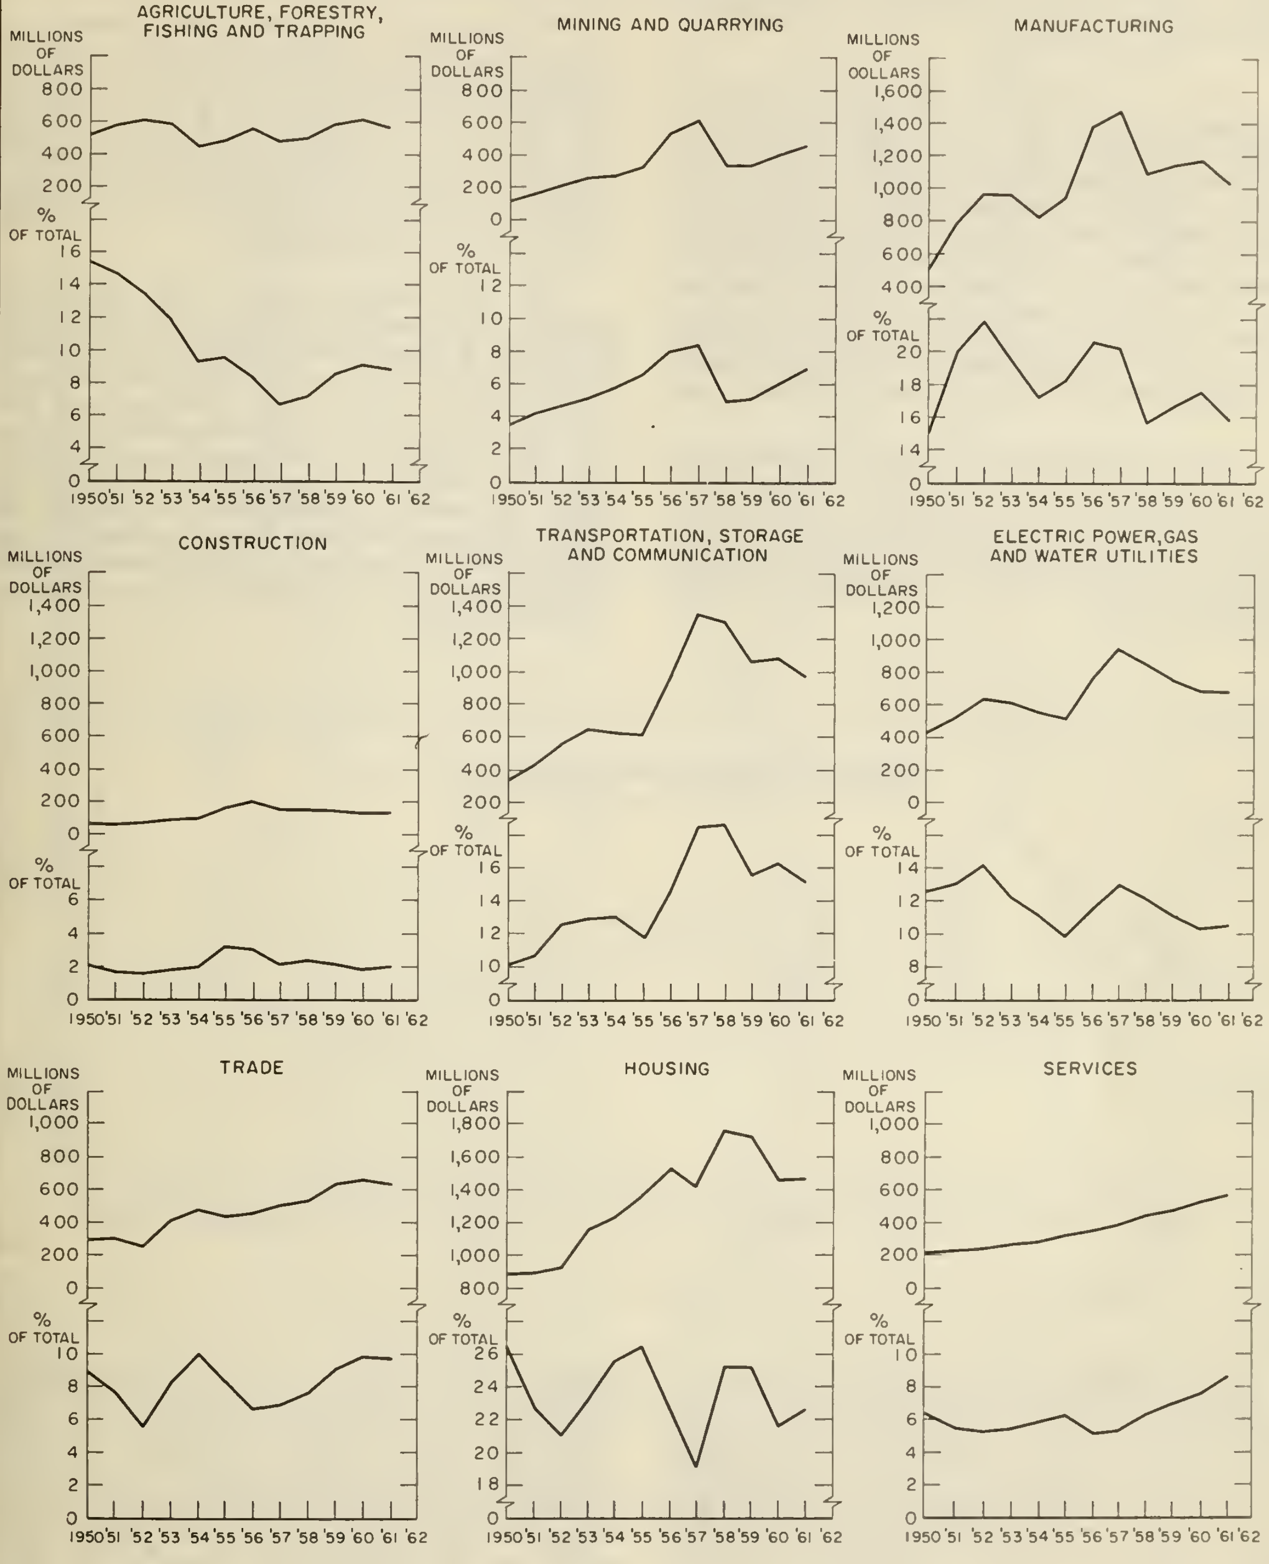
The relative decline in the importance of demand for capital in the combined agriculture, forestry, fishing and trapping industries is particularly noticeable over the period, at the same time demand for capital by the mining industry and the transportation industries, in particular, assumed a much greater relative importance. Strikingly large outlays in the mining industry took place in 1956 and 1957 as a result of the anticipated expansion of demand for copper, lead, zinc, aluminum, nickel, iron ore and petroleum, although an underlying strength is apparent over the entire period. Increased economic activity and strengthening world demand for products of Canadian resource based industries at this time also spurred accelerated construction in activities associated with exports, such transportation facilities as oil and gas pipe lines, the St. Lawrence Seaway and railway rolling stock. Since that time, although the level of demand for capital in these industries has declined both absolutely and relatively the proportion of total capital which they absorbed remained at 22 per cent of the total in 1961 as opposed to 13½ per cent in 1950.

The second most important sector, the manufacturing industry, has not tended to increase its share of total available supply of capital and in 1951 and 1961 absorbed just under 16 per cent of the total, or about the same as the transportation, storage and communication sector in the latter year. However, manufacturer's outlays showed more susceptability to fluctuations in business cycles than other sectors, with upsurges in spending occurring in two waves from 1950-1952 and 1955-1957, which lifted their relative importance noticeable during these periods.

Spending on residential construction rose steadily from 1950 through to 1958 with the exception of 1957, but the levels in 1960 and 1961 have fallen back to that of 1956. However, the relative importance of housing has fluctuated sharply within the twelve years and reflects the diminished importance of housing during the periods when demand for capital resources is heavy in the other business sectors.

CHART-5

NEW FIXED CAPITAL FORMATION BY INDUSTRY



Sources of Saving

Since comments on the cyclical behaviour of savings made by the main sectors will be made in a later section, the following remarks will be limited to the trends of these components by sector, over the longer time period, in relation to both GNP and total saving of all sectors.

Business saving over the entire period has remained notably stable as a proportion of gross national product (Chart 6), averaging approximately 14½ per cent, and with one or two exceptions, deviating around this percentage by only ± 1½ per cent. This stability stems from the importance of capital cost allowances and miscellaneous valuation adjustments which are of overriding importance in business saving and which tend to rise steadily over time, linked in part to the increases in the stock of capital. The proportion of total business saving attributable to undistributed profits has declined over the period.

Changes in personal net saving have been very closely correlated with changes in personal disposable income. This relationship has meant that net personal saving has remained a relatively stable proportion of GNP, fluctuating around an average of 3½ per cent, as personal disposable income has risen in step with GNP.

Because of the equality of saving and investment and because investment as a proportion of GNP has declined in recent years, some offsetting to the stability in business and net personal saving must necessarily have taken place in other sectors.

The offset since 1957 has occurred primarily in government saving, which in the period covering a little more than the last five years has moved from a position of moderate saving to one of net borrowing, with a level of spending which has on average been greater than receipts by just over 2 per cent of GNP. Over the period 1950 to 1961 as a whole, government has been a net borrower, showing a net deficit balance of over $½ billion.

The other notable feature of the sources of saving is the net amount of funds made available for investment in Canada by non-residents. As a proportion of GNP this has fluctuated between 2 per cent in 1952, at which time Canadians were net exporters of capital, to an average inflow of over +3½ per cent since the investment boom of 1956 to date. Over the whole period 1950 to 1961, the net amount of saving by non-residents, as defined for national accounts, totalled $9½ billion dollars, or approximately 14 per cent of total investment in fixed capital, of which nearly $7½ billion has occurred since 1956.

CHART-6

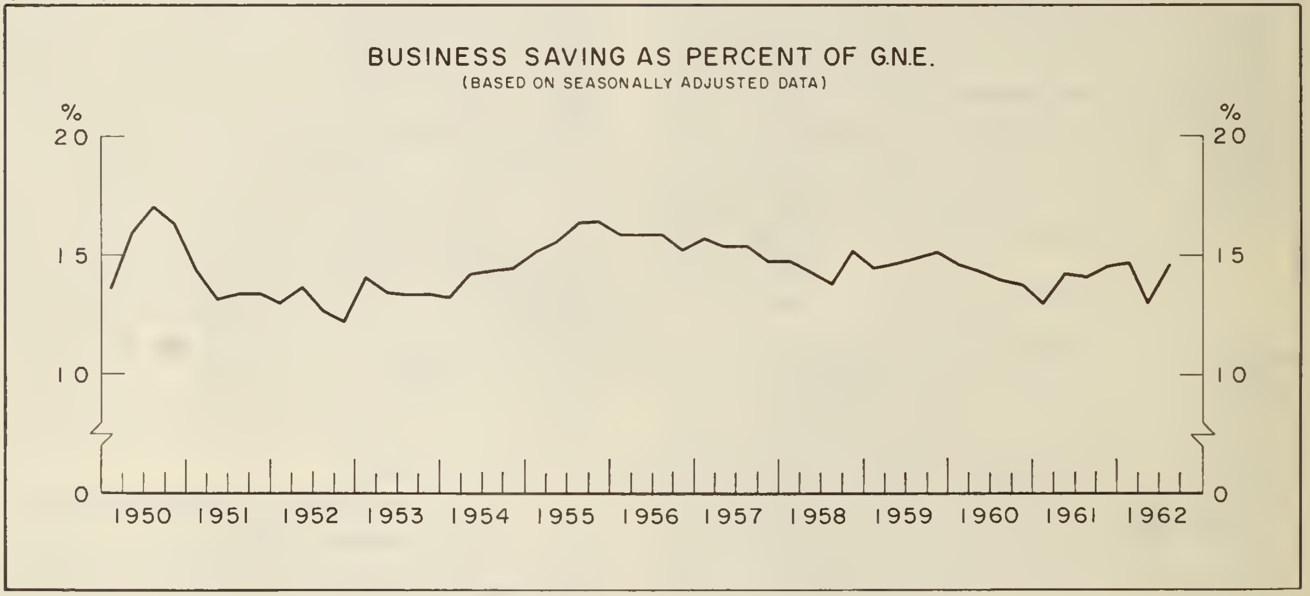


Chart 7 presents the savings of the sectors as a percentage of total saving, (the sum of the components will not add to 100 per cent because neither the inventory valuation adjustment nor the residual error of estimate are shown). The chart shows basically similar movements to those noted above when the sources of saving were discussed in terms of ratios of GNP. In addition, it illustrates the overwhelming importance of business saving in comparison with the other sectors of the economy and the high degree of negative correlation between business saving and the ratio of investment to GNP—as investment increases sharply and relative to other components of gross national expenditure, the relative importance of business saving to total savings declines. In 1951 business saving declined to one half of the total, the lowest proportion for the entire period, as corporation profits began to slip back from the peaks attained in the first quarter 1951. During this time, personal saving and the govern-

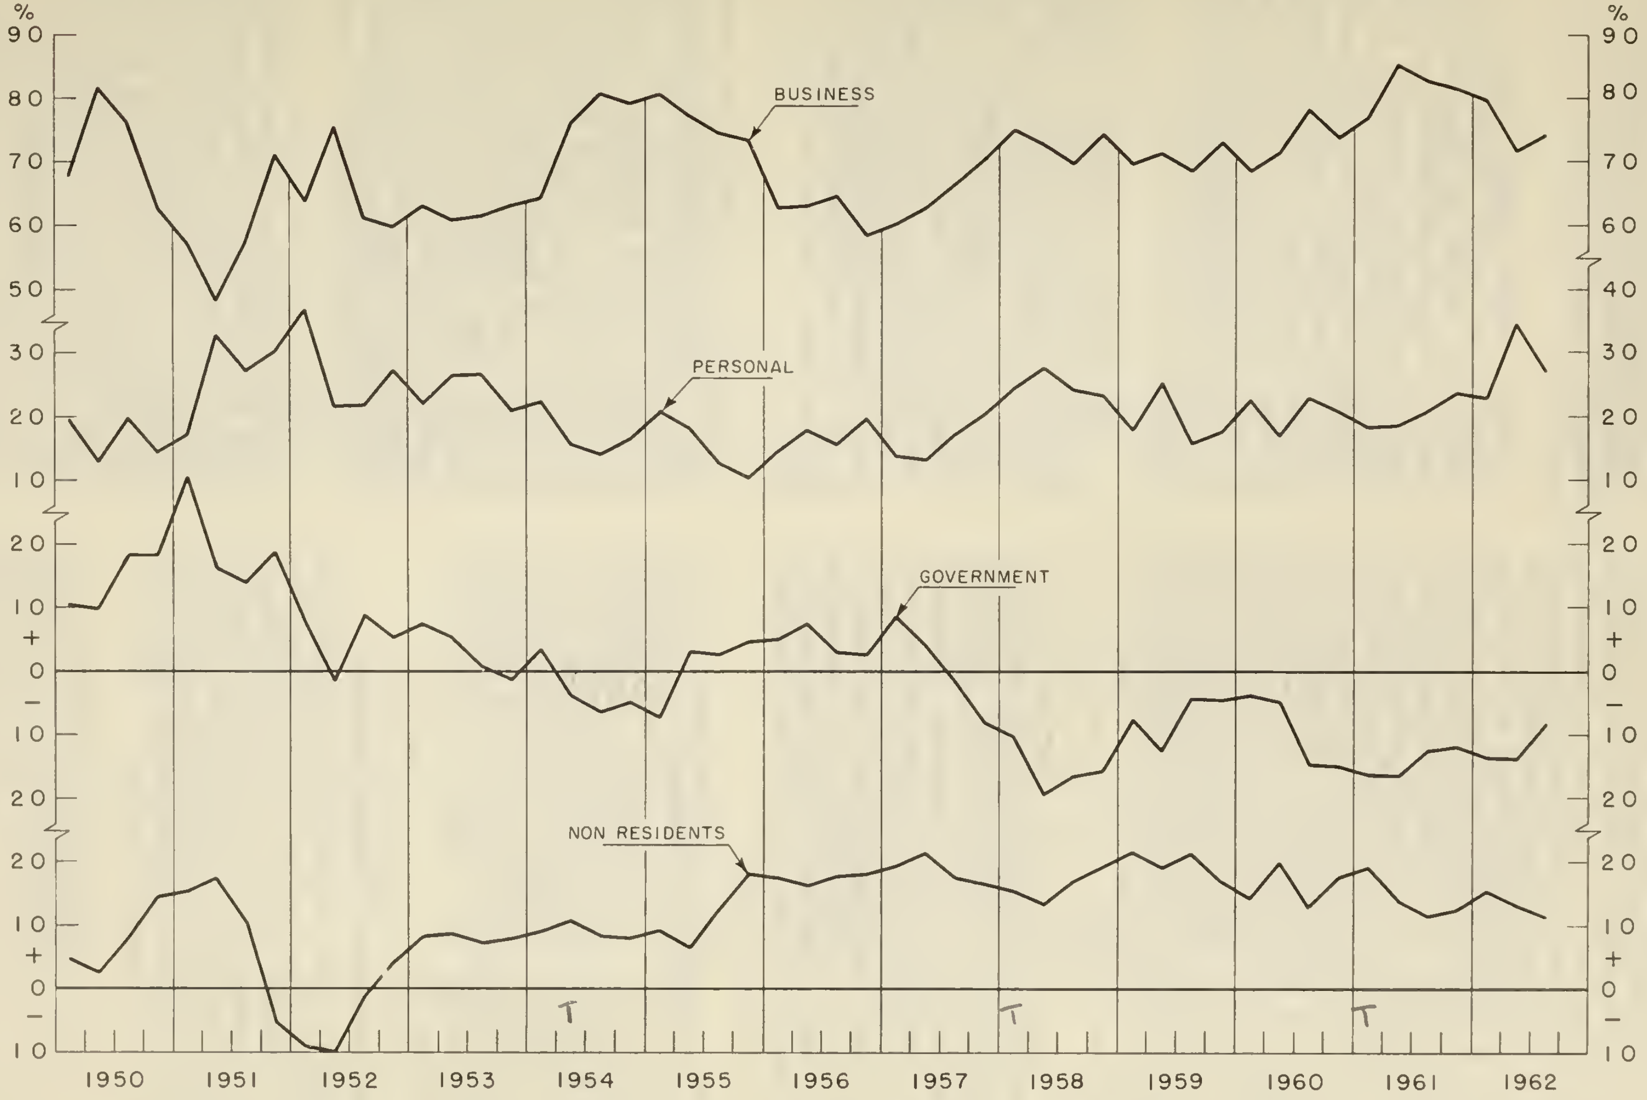
CHART-7

COMPONENTS OF SAVING AS PERCENTAGE OF TOTAL SAVING[1]

(BASED ON SEASONALLY ADJUSTED DATA)



[1] COMPONENTS WILL NOT ADD TO 100 PERCENT BECAUSE INVENTORY VALUATION ADJUSTMENT AND RESIDUAL ERROR ARE NOT CHARTED.

ment surplus, stimulated by some of the sharpest quarter to quarter gains experienced in the entire period in personal income and tax revenue, climbed to unprecedented highs for the post war period. By 1954, business had once more become responsible for over four fifths of total saving, as personal saving declined both absolutely and relatively in the face of increasing unemployment and shrinking personal disposable income, and government during the period ceased to save and had become a net borrower of funds. If, as would probably be correct, a large proportion of the inventory valuation adjustment were to be allocated to business, the movements of business saving would have tended to be enlarged. A sizeable negative adjustment in the latter part of 1950 and through 1951 would have reduced the relative importance of business saving, as it would have done again to a lesser extent in 1955-56. The importance of business saving at such times as mid-1952, 1954 and the beginning of 1961 would be exaggerated by the adjustment for inventory valuation, for during these periods a positive adjustment was recorded.

The important role of the government and the changing pattern of government surpluses and deficits are very distinctly outlined by the chart. It should be remembered that the definitions of government surplus and deficit are those appropriate to national accounts, and also that if government capital formation were included in the saving and investment account this would basically have the effect of raising the government surplus or decreasing the deficit. Other adjustments would be necessary as well, such as allowance for depreciation but these would be of less importance.

The importance of the part played by non-residents is particularly noticeable after mid-1955, and during most of 1956 and 1957 the contribution of non-residents was in fact greater than the net personal saving of Canadians. It should also be remembered, that due to statistical inadequacies a certain amount of saving by non-residents, in the form of retained earnings of non-resident companies, is recorded as business saving and is not allocated to non-residents, this tending to understate their contribution.

Cyclical Behaviour of Saving and Investment

Charts 8 and 9 trace the behaviour of saving and investment over the same phase of the three business cycles occurring within the time span covered. Capital formation is shown separately by type of investment and saving by economic sector. For each cycle the data are charted for four quarters prior to the trough in general business activity and for the six succeeding quarters of recovery.

The cyclical patterns of the investment components reveal a variety of patterns between components, and also between cycles within individual components. However, three general points stand out clearly in the charts, the relatively greater strength of the recovery in the 1953-55 period than in the two more recent cycles, the tendency for spending on machinery and equipment to lag the trough in general business activity and the strength of housing expenditures relative to other investment during the downturns particularly in the 1957-59 period.

House building activity tended to be little affected by the general business declines of both 1953-55 and 1957-59, the sharp rise in the latter period was in part stimulated by large government loans for housing which commenced in the autumn of 1957. In the latest cycle the level of spending on residential construction has been marked both by erratic charges and by a period of unusual stability for those quarters prior to the business trough. The sharpness of the pick-up in housing immediately following the trough can be explained to some extent by changes in the National Housing Act Regulations designed to stimulate housing demand in the earlier part of 1961.

The behaviour of business inventories during the current cycle is in contrast to the very sharp liquidation of inventories and the ensuing build-up which occurred in the 1957-59 cycle. During the current cycle, inventory movements have been of much less significance, on only one occasion were stocks reduced and then only marginally, while the following build-up was noticeably lacking in strength, as stable prices and availability of goods on short demand, coupled with the fact that ratios of stocks to sales remained at a relatively high level throughout the period, removed the necessity for stock piling.

Investment in machinery has behaved in a similar manner through all three cycles, with a decline in spending setting in well in advance of the general business trough and continuing to decline after the trough in business activity has been reached. In both the 1953-55 and 1957-59 periods it was five quarters before investment had even recovered to the level existing at the time of the business trough. A feature of the present period is the early stage at which some upturn in spending occurred. The level of investment in machinery and equipment over the entire period is of considerable influence on the level of merchandise imports with domestic supply satisfying approximately sixty per cent of the demand for this form of investment.

The behaviour of capital spending on non-residential construction has been different in each cycle. In the 1953-55 period investment conformed closely to the general business cycle, turning down three quarters in advance of the business trough, continuing down for one additional quarter and then recovering to climb uninterruptedly for the remaining five quarters charted. Non-residential construction in the 1957-59 cycle commenced to contract two quarters prior to the general business trough but continued to decline for four quarters until it levelled out at about 20 per cent below the peak some six quarters earlier. It is this peak, achieved in the third quarter of 1957, that still remains the highest level

of investment recorded, with the level during the current recovery still some 13 per cent lower. Possibly because of the prevailing low level of spending on non-residential construction in 1959-60 relative to 1957, investment showed little decline in the four quarters prior to the general business trough in the 1960-62 period. The strength exhibited in the period after the 1961 trough, increased the demands on production more sharply than had been experienced for more than two years.

The patterns of saving by sector, as in the case of investment by type, reveal the same diversity of movement. Business saving has shown rather moderate declines in periods prior to troughs in general business activity, with the exception of a rather sharp but short lived drop which occurred coincident with the trough in business activity in 1961. This particular fall was due to unusually small undistributed profits, as dividend payments to non-residents rose to an unprecedently high figure. It has generally been the case that the fairly sharp declines in undistributed profits which have been experienced during the three recessions have been modified by the stability of capital cost allowances and the miscellaneous valuation adjustments. The recovery in business saving was particularly strong in both the 1953-55 and 1960-62 periods, when within four quarters following the trough, saving had increased by more than 20 per cent as business conditions improved and profits moved up.

Net personal saving exhibits some striking fluctuations, with saving cut by a half in the four quarters preceding the trough in the 1953-55 recession, as disposable income fell and expenditure edged up, and by more than 50 per cent in the like period of the 1960-62 cycle as personal expenditure rose faster than personal income over the period. The three quarters following the trough in both these cycles have witnessed sharp recoveries. In the 1957-59 cycle, saving rose through most of the period preceding the trough and did not turn down until the recovery in business activity had been under way for one quarter. This rather unusual strength preceding the trough in business activity is accounted for by the continuing increase in wage and salary payments but more especially by the tremendous growth of government transfer payments to persons. In the period between the first quarter 1957 and the trough in the first quarter 1958, transfer payments to persons increased by over 30 per cent. The recovery was marked by declining personal saving, as direct tax payments increased more sharply than in the recovery periods of the other two cycles and personal spending rose in step with increasing personal income. The one exception to this was in the second quarter 1959 when the rise in personal spending marked time temporarily.

The behaviour of the government net balance has been fairly regular in each of the three cycles. The decline in the surplus, or increase in the deficit has tended to commence four or five quarters in advance of the trough in general business activity and continued in periods 1953-55 and 1957-59 for a further quarter before levelling off or beginning to reverse direction. In the 1960-62 cycle the government ran a deficit through the whole period—it reached its greatest magnitude one quarter preceding the trough, was cut a shade and then remained relatively stable through to the second quarter 1962. The particularily sharp change in the government surplus/deficit position during 1957-58 was partly associated with the rapidly expanding transfer payments noted above but also the fairly sizeable declines in receipts of personal and corporation direct taxes, which together were of greater importance in this cycle than in the earlier and later cycles. Government net borrowing in the 1960-62 period amounted in total to almost $2¼ billion, in contrast to balanced accounts in the same period of the 1953-55 cycle and net borrowing of over $1¼ billion in the 1957-59 cycle.

The resources of non-residents made available for investment in Canada showed little response to fluctuations in the 1953-55 business cycle, remaining stable during the four quarters preceding the trough and for the four succeeding quarters. It was only in the latter half of 1955 that a sharp increase occurred as the initial impact of the capital formation boom began to be felt. The effects of the two later cycles on non-residents savings for investment are more clearly discernible with the low point lagging by one and two quarters the general business low.

Conclusion

The above article has been written with the intention of focussing attention on the available data in this field, of indicating some of their limitations, and of describing some of the more salient changes that have been occurring over a little more than the past decade. A thorough analysis of the data is beyond the scope of this article but it is hoped that it may be partly instrumental in stimulating some further analysis in the field. Many of the minor limitations of this material, published as part of the national accounts framework will only become apparent as the user subjects the data to careful scrutiny and analysis. Nevertheless, in spite of its limitations, the national saving and investment table represents the most comprehensive body of information on the subject that is as yet available on a current basis.

INDUSTRIAL PRODUCTION (More detail in Table 11)

Industrial Production was slightly higher in November with small gains in both durable and non-durable manufacturing, as well as electricity and gas utilities, being mostly offset by a 1.5% decline in mining output.

		total industrial production	manufacturing production			mining production	electricity and gas	total iron and steel
			total	durables	non-durables

EMPLOYMENT, SELECTED INDUSTRIES (More detail in Table 17)

Employment in manufacturing increased fractionally in November reflecting similar movements in its two major components, durables and non-durables. In the individual industries, the major changes were in employment in construction which increased 2% and mining which declined 1%.

RETAIL TRADE, MOTOR VEHICLE SALES (More detail in Tables 48 and 76)

Total retail trade continued to rise in November due to increases in most store types and particularly in fuel and motor vehicle dealers and department and clothing stores. Total sales of new motor vehicles were about unchanged in November. There was a 7% increase in North American passenger cars but it was offset by declines in sales of total commercial and European passenger cars.

						new motor vehicle sales

MANUFACTURING INVENTORIES, SHIPMENTS, ORDERS (More detail in Tables 36 and 37)

Manufacturing shipments and new orders increased in November while inventories remained virtually stable and unfilled orders declined fractionally.

New orders in construction goods and machinery rose substantially while shipments of primary iron and steel were about unchanged.

		all industries							
		owned inventories	shipments	new orders	unfilled orders	new orders machinery	new orders construction goods	shipments primary iron and steel	ratio of inventories to shipments

EXPORTS AND IMPORTS (More detail in Table 84)

Total exports rose in November reflecting sizeable increases to the United Kingdom and to "all other countries" and a decline to the United States.

Total imports decreased as a result of a general fall-off from all countries.

	exports (including re-exports)				imports			
	all countries	United States	United Kingdom	all other countries	all countries	United States	United Kingdom	all other countries

SELECTED MONTHLY SERIES (More detail in Tables 12, 26, 27, 29, 80 and 88)

Average hourly earnings in manufacturing remained unchanged in November. The average hours worked per week returned to its former high levels.

Total and manufacturing labour income rose in November continuing the general upward trend of the year.

[1] Gross National Product at market prices excluding accrued net income of farm operators from farm production.

[2] Before dividends paid to non-residents.

[3] Original data as in column 8, Table 80.

PRICES

The wholesale general index remained virtually unchanged in December.

The index of industrial common stocks rose more than 2% to 124.0 and the index of thirty industrial materials advanced for the second month.

Export prices increased 1% in November from 129.1 to 130.4.

The consumer price index was unchanged in December. For 1962, the index averaged 130.7, 1.2% above the 1961 annual index.

[1] Prior to the census in 1961, population estimates were made quarterly on March 1, June 1, September 1 and December 1, and in addition on July 1 and January 1 of each year. After the 1961 census the quarterly estimates will be made on January 1, April 1, July 1 and October 1, as well as June 1. **Source: Estimated population of Canada by provinces at June 1, 1962 (91-201) D.B.S.**

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stacks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. Source at bottom of Table 10.

Table 7: gross national expenditure in current dollars

[1] The statistics for individual industries exclude strikes involving less than 100 workers. The total for all industries continues to include all strikes. [2] The annual and monthly "all industries" totals for 1960 and 1961 have been revised and are no longer quite comparable with the data for individual industries, apart from the difference described in footnote 1. **Source: Labour Gazette, Department of Labour.**

[1] The data in Tables 17 to 27 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and domestic service. [3] Includes storage and communication. [4] Includes insurance and real estate. [5] Excludes public administration and defence and such community services as health and education. **Source: Employment and Payrolls, (72-002), D.B.S.**

---

[1] See footnote 1, Table 17. [2] See footnote 2, Table 17. [3] Employment indexes in manufacturing and in its durable and non-durable components are given in Table 17. [4] In addition to those listed, tobacco products, leather, printing and publishing and miscellaneous industries are included in non-durable manufacturing.

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Industry values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] End of period. [5] Classified according to the Standard Industrial Classification. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

[1] Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Excluding shipments for re-processing at maker's own plants. [3] Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings. **Source: Primary Iron and Steel (41-001), D.B.S.**

[1] These totals include all generating agencies producing over ten million kilowatt hours per year. [2] These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. [3] Less imports. [4] Total net generation less net exports. [5] Mainly the amount used in electric boilers. **Source: Electric Power Statistics, (57-001), D.B.S.**

[1] Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. [2] The data on building permits are collected for 1,100 municipalities and individual figures are available on request. Some of the annual totals for 1960 and 1961 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. **Source: Building Permits (64-001), D.B.S.**

[1] The coverage was extended to 507 municipalities in 1948, and as of 1961, stands at 1,100, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D.B.S.**

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected.

[2] Planks and boards, flooring and square timber.

[3] Hollow blocks including fireproofing and load-bearing tile.

[4] For building insulation only.

[5] Figures cover the production of firms which normally account for 90 per cent of the total for Canada.

[6] Includes concrete chimney blocks, up to December 1959.

[7] Factory sales of firms which normally account for 96% of total Canadian production.

*See also Tables 29 and 30. [1] Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1961 are final prices. From August 1, 1961 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. [2] Includes subsidy on hogs. [3] Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef. [4] Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. **Source: Coarse Grains Quarterly (22-001), Stocks of Meat and Lard (32-012), Index Numbers of Farm Prices of Agricultural Products (62-004), Livestock and Meat Trade Report, Dept. of Agriculture, D.B.S.**

[1] Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. [2] Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. [3] Annual data are monthly averages of crop year. [4] Includes eggs for hatching.

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.
[2] Includes stocks held by manufacturers, wholesalers and other warehouses. [3] The increase in percentage of capacity from October to November, 1960 reflects the fact that some mills worked more than the 25 days included in this formula as well as a reduction in total daily capacity from 171,000 hundredweight in October to 151,000 hundredweight in November. **Source: Grain Milling Statistics (32-003), Margarine Statistics (32-005), Quarterly Report on Processed Foods (32-007), D.B.S.**

---

[1] Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. [2] Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade. **Source: Retail Trade (63-005), D.B.S.**

[1] Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. [2] Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. [3] Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. [4] Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. Instalment credit includes conditional sales agreements only. [5] Amount owing to oil companies, excluding commercial accounts. [6] Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. [7] Figures for dates other than year ends are estimated on the basis of the loans by twelve companies. **Source: Department of Finance, Department of Agriculture, Bank of Canada.**

[1] As from January 1958 the indexes, the imports total and the "miscellaneous commodities" total exclude various non-commercial and special transactions previously included in our imports totals. For a more detailed explanation see Trade of Canada (Exports) 1960. [2] Includes pigs, ingots, blooms and billets, castings and forgings, ferro-alloys and rolling mill products. **Source: Trade of Canada, Imports (65-007), D.B.S.**

[1] Data in this table refer to railways with annual operating revenues of $500,000 or over. Monthly averages for 1960 and 1961 differ from the sum of the monthly data due to revisions which cannot be allocated by months. [2] Includes January to July interim payments related to recommendations of the Royal Commission on Railway Transportation. **Source: Railway Operating Statistics (52-003) monthly, (52-206) annual, D.B.S.**

[1] Revised series with coverage limited to business failures under the Bankruptcy and Winding Up Acts, excluding individuals not operating businesses as such. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002), D.B.S.**

[1] Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks. [2] Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada. [3] Less total float, i.e. cheques and other items in transit (net). [4] At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about $140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date. **Source: Statistical Summary of Bank of Canada.**

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales. [1]The Canada totals by months for 1960 and 1961 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1960 and 1961 nor the monthly averages for 1961 have been revised to agree with the Canada total. **Source: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.**

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (Excluding government-owned companies and incorporated co-operatives). [1] Includes Tobacco, Leather and Miscellaneous Manufacturing Industries. [2] Includes Electric Power, Gas and Water Utilities. [3] Includes Community, Business and Personal Service Industries. [4] Includes Agriculture, Forestry, Fishing and Construction. **Source: Corporation Profits (61-003), D.B.S.**

A NOTE TO USERS

A New Supplement:

A new Supplement to the Canadian Statistical Review will appear later this year, containing only *annual* data which go back to 1926 for most series. It will continue and bring up-to-date many of the annual figures of the last (1959) Biennial Supplement but will also differ from the latter publication in format and content as the new Supplement will be closely modelled on the current issues of the Canadian Statistical Review.

The new volume will be submitted without charge to all regular subscribers of the Review and to non-subscribers at a nominal price.

Back Records:

The following back records, raw and seasonally adjusted, are available on request from the Current Business Indicators Section, National Accounts and Balance of Payments Division, D.B.S. These are in addition to the back records found in the Annual Supplement.

(1) The series on inventories, shipments and new orders in Tables 34, 35 and 36 from 1952 to date.

(2) The series on inventories held broken down into raw materials, goods in process and finished products as in Table 37 from 1952 to date.

(3) All the series on corporation profits before taxes (Table 99) are available quarterly from 1955 to date.

(4) The series on building permits by types (Table 58), namely industrial, commercial, institutional and government permits are available from 1948 to date.

(5) The series on merchandise exports and imports in Table 84 for the European Common Market, European Free Trade Association and the O.E.C.D. countries from 1946 to date.

(6) Employment indexes from 1949 to date for the following series in Table 17: industrial composite, forestry, public utilities and finance.

(7) Labour income by provinces, as in Table 12, is available from 1947 to date.

(8) All retail trade series from 1947 to 1961 as in Table 76.

Other Material:

There is still available a very limited number of copies of reference paper No. 77 entitled "Seasonally Adjusted Economic Indicators, 1947-1955". It gives a survey of the theory problems and methods in the seasonal adjustment of time series. This paper is available on request while the supply lasts.

Annual Subscription: $5.00 — Single copies: 50c. each

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information Services Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

RECENT DEVELOPMENTS IN THE WORK OF THE DOMINION BUREAU OF STATISTICS[1]

This note is the fourth of a series, whose purpose is to keep readers of the Journal in touch with the evolution of statistical programmes in Canada. The previous notes were published in November, 1959, February, 1961, and February, 1962, and readers are referred to them since a project once initiated is not mentioned again until a significant stage in its development can be marked off.

In education statistics work is being extended in the field of vocational training. In the area of judicial statistics some new developments in connection with the adoption of uniform reporting systems have taken place. Studies based on the Labour Force Survey of the work experience of Canadians in 1961 and of the labour force status of post-war immigrants have been initiated during the year. Some new price series have been released. Improvements are taking place in statistics on Canada's international investment position. The major aggregates of the 1958 survey of farm expenditure and income have been published. Certain other developmental work in the area of agricultural statistics are taking place as well as some major improvements in forestry statistics. New information has become available on consumer finances. Some of the existing gaps in statistics of public finance have been closed with the publication of a report on Federal government enterprises. A new publication on balance sheet data of financial corporations will become available early in 1963. A new report on non-financial aspects of all pension plans was released late in 1962. The so-called real output study is nearing publication. Construction of the 1961 inter-industry flow of goods and services is about to begin. Work on preliminary estimates of the gross and net stock of capital and of capital consumption allowances has been resumed. Revisions to the Standard Classification Manual are being published. The standard list of establishments is now virtually complete. Finally, for users of historical data, the Bureau is preparing to publish about 30 selected series extending back to the inter-war period or longer.

Social Statistics

A manual for secretary-treasurers of school boards is a new development in the field of school finance. This manual is being prepared in cooperation with the provincial departments of education, the Canadian Teachers' Federation, the Canadian Education Association and the Canadian School Trustees Association. Work is being extended in the area of vocational training; private trade schools, including private correspondence schools, are now being covered. The University Student Income and Expenditure Survey, which is undertaken periodically, is being brought out for the year 1961 - 1962.

As for judicial statistics, the new Uniform Crime Reporting system was implemented in January, 1962, and follow-up meetings have been held on a regional basis to deal with its consistent application. Preliminary meetings have been held with the provincial attorneys general leading up to a proposed future conference on adult court statistics. On April 1, 1962, an improved penitentiary statistical form was put into effect in cooperation with federal penitentiary authorities. On January 1, 1963, a new training school schedule is to be put into operation and a Training School Reporting Manual has been prepared. A revised statistical report on police administration is in preparation.

Economic Statistics

The interdepartmental labour force advisory committee has given attention to exploiting more fully available sources on labour statistics. Analytical reports on two such projects in connection with the Labour Force Survey are well advanced. One study has to do with the work experience of Canadians in 1961; it is based on a special enquiry made in January, 1962, in which a quarterly record was obtained of weeks worked, weeks looking for work, and weeks not in the labour force. The other study deals with the labour force characteristics of post-war immigrants; since 1956, post-war immigrants in the Canadian labour force have been identified twice each year in the labour force surveys.

Until 1962, new and renewal claims for unemployment insurance benefit were not recorded separately. It is believed that changes in the industrial distribution of new claimants would be a more sensitive indicator of shifts in the industrial sources of unemployment than total claimants. Accordingly, the new claims series has been added to the range of unemployment insurance statistics.

The monthly survey of employment and payrolls is being revised to agree with the New Standard Industrial Classification and the Standard Establishment List and is to adopt a new 1961 base for the index numbers.

In the past, the monthly estimates of labour income did not provide provincial breakdowns for the Maritime and the Prairie regions. Such breakdowns are being made available, together with historical data.

An occasional paper entitled *Unemployment in Canada* was released in April, 1962.[2] The paper consists of tables and charts.

Work on the development of productivity measures has progressed in two directions. The first approach aims at producing overall national measures which will indicate productivity trends in the private, non-farm economy as a whole and in some of its major sectors; the second to produce, for selected individual manufacturing industries and groups of industries, detailed measures suitable for the analysis of the nature of movements and variations in productivity. Most of the current work consists of pilot studies and tests designed to indicate the most suitable data sources for productivity measures, and to develop the best methods of refining and matching the required input and real output series. This work is important in itself due to its contribution to a closer integration and improvement of various other important statistical series.

[2] Catalogue No. 71-503, Queen's Printer, Ottawa, 75¢.

Following completion of the revision of the national Consumer Price Index in May, 1961, work proceeded throughout the remainder of 1961 and early 1962 on revising the ten regional city consumer price indexes. The items included in these indexes, and their weights, have been brought into line with current family expenditure habits as recorded in surveys covering the year 1957. The indexes previously were based on expenditure patterns in 1947-1948. The revised indexes continue on the time base 1949 = 100. The methods and techniques employed in revising these city indexes are identical to those used in revising the national Consumer Price Index; a comprehensive review of these is available in *The Consumer Price Index for Canada (1949 = 100)—Revision Based on 1957 Expenditures.*[3]

In April, 1962, DBS introduced a special study on average rents in 16 major Canadian cities based on rent data obtained from rented households in the Labour Force Survey. These data are used primarily in measuring rent changes as a component of consumer price indexes in Canada. These statistics on average rents have been developed as a result of a widespread demand for information on rent levels associated with various types and sizes of rental accommodation and the services included in rent payments. Average rents have been cross-classified by these various attributes. It is intended to make current statistics available periodically in *Prices and Price Indexes.*[4] A comprehensive description of the series together with data for sixteen cities is available in *Residential Rents in Major Canadian Cities.*[5]

The programme of continuing family expenditure surveys was resumed in 1962, after a lapse of almost two years instead of the customary one-year interval, occasioned by the fact that 1961, which would normally have been a survey year, was also a census year. The 1962 survey programme was planned with the needs of the Consumer Price Index as a primary consideration. Food expenditure detail for the purpose of studying seasonal expenditure patterns is being collected monthly in seven major cities, and a recall survey of the total budget for the year will be conducted early in 1963.

In the food expenditure survey, monthly samples of about one hundred and fifty families are asked for weekly records of food expenditure for a period of four weeks. As in past surveys, the sample is drawn from lists of families rotated out of the Labour Force sample approximately six months earlier. Eligibility criteria of family composition are the same as those applied in 1957, and earlier surveys, whereas the family income range has been raised at both limits to include families with incomes between $3,000 and $7,500. The collection of four weekly records instead of two was designed to determine whether the shorter period provides adequate estimates of monthly food expenditure. It also affords an experiment in response for a longer record-keeping period than has been attempted hitherto in this country. The scope of the annual recall survey will be similar to that of the food survey, although there may be some adjustments in target-group criteria on the basis of analysis of 1959 survey data. According to present plans the total budget survey will be processed by computer, which, it is hoped, will result in some gain in timeliness of the published data. A preliminary release of 1959 survey results was made in the DBS Daily Bulletin of May 23rd. The reference paper *City Family Expenditure, 1959,* is now in preparation and, it is hoped, will be released before the end of 1962.

A new reference paper released in September, 1962, presents a full description of concepts, definitions, sources of data and methods of calculating *Price Indexes of Highway Construction in Canada.*[6] The report covers previously published base-weighted indexes of prices paid by provincial and federal governments in contracts awarded for highway construction, and introduces recently developed current-weighted indexes. Annual indexes for the four-year period 1956 to 1959 are presented and compared. The time base for the indexes is 1956 and the indexes express prices paid each year as a percentage of prices in 1956. The series will be published on a regular annual basis in *Prices and Price Indexes.*[7] Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work such as, an acre of clearing, a cubic yard of earth excavation, or a ton of hot-mix bituminous paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway departments.

Revised security price indexes on the base 1956 = 100 were introduced in the July issue of *Price Movements*[8] and the June issue of *Prices and Price Indexes.*[9] In addition to a descriptive outline of the revision, both publications included revised indexes by months, from January 1956 for the Investors Index, its major components and the Mining Index. The price reference base for the indexes is the year 1956, which has been adopted as an interim base for recently developed DBS indexes, and the indexes express current prices as a percentage of price in 1956. Security price indexes measure through time the effect of price change on the value of portfolio of stocks bought and held by a hypothetical investor(as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on the Toronto, Montreal and Canadian stock exchanges. In the revised indexes, a major change is the classification of stocks according to the Standard Industrial Classification. The new classification involved extensive re-grouping of stocks within the index and facilitated inclusion of groups not previously covered, e.g., pipeline and investment and loan stocks. As a result, weights representing the relative importance of individual stocks and groups of stocks were appreciably revised, particularly in the Investors Index. A reference paper is planned.

The Wholesale Price Index of Canadian Farm Products at terminal markets, 1935-39=100, is to be replaced by a new series entitled "Index Numbers of Prices Paid for Canadian Primary Farm Products, 1956=100". Complete details of commodity content, weighting, and construction methods will be contained in a reference paper which will also carry indexes monthly and annually from January, 1956. The major change between the existing and the new indexes relates to the marketing level at which the commodities are priced. The existing index measures the movement of producers' prices at terminal markets. The new indexes will measure the movement of prices paid by purchasers at the point of entry of the farm products into exports, domestic processing, and domestic fresh market. This shift in the pricing point was undertaken to permit production of indexes which are immediately comparable with indexes for past years. Under present marketing procedures for Western grains, particularly wheat, final prices to producers are announced many months after the end of the crop year, during which time indexes are subject to frequent and major revision and lack comparability with preceding crop years. Somewhat similar problems exist where Canadian farm products are marketed under deficiency payments programmes. The new indexes will measure price movements for three Canadian primary farm product flows at their point of entry into(1) exports, (2a) domestic processing, and (2b) domestic fresh market. The price reference base for the new index will be 1956 and the indexes will express current prices as a percentage of prices in 1956.

In connection with Canada's international investment position, a new benchmark for estimating Canadian ownership of United States stocks has been established. The benchmark statistics are important in themselves but also as a verification of the adequacy of the system of measuring capital flows and as a basis for future estimates of income receipts from these holdings, capital flows arising from offerings to shareholders, retirements, etc.

The satisfactory response to the same recent survey will make it possible to provide additional detail of Canadian holdings of United States stocks classified by size of total Canadian investment, by industry, and by certain other characteristics such as the existence of interests in Canada. It will also be possible to produce a broad comparison between book values of these holdings as used in statements of Canada's international investment position and market values.

Development work in the field of short-term capital movements, which involves new or improved series of statistics for (i) chartered bank liabilities to and claims on foreigners; (ii) treasury bill transactions; (iii) buy-backs; (iv) commercial paper; (v) finance paper; (vi) inter-company balances; and (vii) finance company borrowing; as well as changes in the use made within the Canadian quarterly data of foreign statistical series, is virtually complete and improvements are being incorporated into the statistics.

The distribution by size and industry of foreign-controlled investments in Canada, a study which is undertaken periodically, is now available for the end of the year 1960 and will be incorporated into the bulletin *The Canadian Balance of International Payments and International Investment Position.*[10] Some of the findings were analysed in a note in the Canadian Statistical Review for August, 1962.

Some of the results of the 1958 Farm Expenditure and Income Survey, which provides data on aggregates of farm expenditure and income, farm indebtedness and farm capital were published late in 1962. The Bureau carried out a critical evaluation of the information available from the above-mentioned survey and from other sources on farm power machinery operating costs with a view to drawing estimates consistent with the farm finance series.

The Bureau undertook a revision of the crop, livestock, poultry and dairy series for the intercensal years to conform with the beginning and ending benchmarks of the 1956 and 1961 censuses of agriculture. This project involved an evaluation of the methods of estimating statistics for the five-year period for the purposes of determining the actual revisions to be made and deciding on the methods to be used for the 1961-1966 period.

At the request of the Department of Agriculture the Bureau made an analysis of its yield data with a view to establishing actuarially sound premium rates for a proposed crop insurance scheme covering potato production in the province of Prince Edward Island.

In an effort to obtain alternative and more reliable sources of farm prices information for beef cattle and calves, the Bureau undertook an experimental survey of producers in Alberta. The results of this survey will be used for the published estimates of farm cash income and the farm price index. If successful in Alberta, this survey will be extended to other provinces.

---

[10] Catalogue No. 67-201, Queen's Printer, Ottawa, $1.00.

The 1961 Federal-Provincial Conference on Agricultural Statistics had recommended that special efforts continue to be made to improve methods of estimating production of potatoes in all provinces. At present estimates are considered to be unsatisfactory in all provinces except the Maritimes. In this connection, the Bureau undertook, in cooperation with the province, a survey of commercial potato producers in Alberta.

Following experimental surveys in the province of Nova Scotia, the Bureau undertook in 1962 an annual survey of fruit tree numbers in the provinces of Ontario, Quebec, and Nova Scotia. Such information would be of considerable use in estimating future trends in the industry.

The provinces collect statistics of primary forestry production from Crown lands but none except Quebec and British Columbia collect data on production from private woodlots, which in at least one province represents almost 95 per cent of all production. In an effort to fill this gap in forestry statistics the Bureau initiated a survey of private woodlots (including farm woodlands) several years ago. At present the survey is province-wide in Prince Edward Island, Nova Scotia and New Brunswick, and covers a large part of Ontario. Arrangements are being made to bring in the other provinces. This survey is carried out in cooperation with the Department of Forestry and the provincial governments. A Federal-provincial conference on forestry statistics is scheduled to take place in March of 1963 and preparations are under way for it.

Some improvements can be reported in the field of transportation statistics. Arrangements have been completed to expand the annual Shipping Report to make available origin and destination data on cargoes loaded and unloaded for both foreign and coastwise shipping at the eight largest Canadian ports. These data are to be produced as Part IV of the annual Shipping Report series and the first issue, covering the year 1961, is expected to be released by the end of 1962. Similar data are being compiled for the seventeen next largest Canadian ports and will be available on request. Plans are well under way to produce Part V of the Shipping Report series which will contain traffic flow data for eight selected commodities.

To improve timeliness the annual Motor Carrier Report is to be broken down and published in two separate reports effective 1962. Part I will contain data pertaining to Class 1 and 2 carriers; Part II will contain data for Class 3 and 4 carriers. These classes are based on the total gross annual operating revenues. The development of a quarterly Motor Carrier Report is now well under way with a pilot study being carried out in the Province of Ontario. If successful the pilot study will be expanded into a national survey.

As of January, 1960 the commodity data produced in the Shipping, Canals, and Motor Transport Traffic Series, have been converted to the revised DBS Standard Commodity Classification. The commodities carried by rail are coded according to the classification adopted by the Association of American Railroads and a reconciliation with the Bureau's Standard Commodity Classification is in progress of development. It is expected to be effective for approximately 85 to 90 per cent of the total tonnage of goods carried.

Turning to consumer finances, the results of the income survey taken in the spring of 1960 were released in the first half of 1962 in the publication *Distribution of Non-Farm Incomes in Canada, by Size, 1959.*[11] The publication is similar to those released previously for the years 1951, 1954 and 1957 although some new data are available. This is the first survey to analyse income by level of educational attainment. In addition, a section is included on the characteristics of automobile owners by income and other family characteristics as well as data on the characteristics of automobiles owned by families.

Another survey was conducted in the spring of 1962 in respect to incomes received in 1961. A new feature of this survey was the inclusion of expanded questions on work experience during 1961. It is expected that the results of the survey will be released in the middle of 1963.

The processing of the income data from the twenty per cent sample of non-farm households interviewed as part of the 1961 Census of Canada is now in progress. The release of data from this sample was originally scheduled for 1963. However, the processing will take longer than originally anticipated and publication will not start until at least early 1964. The main income statistics from the sample will be released in Volume IV of the Census reports.

A major gap in published statistics on government finance was closed in the fall of 1962 with the publication of an annual series entitled *Financial Statistics of Federal Government Enterprises.*[12] This report provides tabulations on assets, liabilities, and net worth, and on current revenue and expenditure and net surplus account transactions for the years 1958, 1959 and 1960, grouped according to the Standard Industrial Classification. The report also contains material on concepts and definitions as well as some analysis of the data.

Information on assets and liabilities of provincial government liquor commissions was published for the first time in the last annual report *Control and Sale of Alcoholic Beverages in Canada.*[13]

Additional tables were introduced in the latest edition of *Financial Statistics of Municipal Governments — Actual*[14] showing a breakdown, by province, of net general revenue and expenditure and of total direct and indirect debt less sinking funds. These data appeared formerly only at the national level in the report *A Consolidation of Public Finance Statistics.*[15]

A new quarterly publication covering balance sheet data of trust companies, mortgage loan companies, and instalment finance and other loan companies, will be initiated early in 1963. This work forms part of a larger quarterly survey of corporation balance sheets but it will be at least another year before results are available for non-financial corporations.

As part of the seasonal adjustment programme, the publication of seasonally adjusted series for manufacturing orders, inventories and shipments by economic use classification was begun in April, 1962. In May of that year the Bureau published the annual Supplement to the Canadian Statistical Review, thereby providing the complete back record for the more important seasonally adjusted series.

The growth in the importance of pension plans as a medium of personal saving has prompted the Bureau to undertake new work in this area. A survey that has been in progress for some time reached publication late in 1962 when *Pension Plans* — Non-*Financial Statistics 1960*[16] was released. This new survey covers all pension plans and provides information on the general structure of the plan, employment coverage and eligibility, retirement, etc.

The work of estimating in base year dollars gross domestic product by industry of origin, the so-called real output study, has advanced to the point where the reference paper is completed and circulated for comment at the time of writing; it is hoped that the paper will be published early in 1963. The statistical tables will provide annual data from 1935 on and seasonally adjusted and unadjusted quarterly data from 1946 on.

It is expected that construction of the 1961 table on the inter-industry flow of goods and services will commence early in 1963 when final data from the 1961 Census of Manufactures begin to emerge. Preliminary plans call for roughly forty industry groups in manufacturing; the number of groupings in other industrial divisions will depend on an assessment of the data and the resources available.

Work on the preparation of estimates of the gross and net stock of capital and of capital consumption allowances by industry, interrupted during the past fiscal year, has been resumed. Preliminary estimates for nost industries have been completed and are now being examined for their conceptual significance and statistical limitations. Following such examination, a decision as to publication of the estimates will be made.

Turning to classification systems, a French edition of the Standard Industrial Classification manual was published late in 1962. Volume I of the Standard Commodity Classification Manual is being revised (1) to take account of changes arising out of the work done in adapting it to exports and imports; (2) to take account of new developments in certain commodity fields. Amended pages will be made available. Volume II — the Classified Index — will be completely revised incorporating the changes made in Volume I and adding new commodity terms. Volume III of the Manual — the alphabetical index — is being published for the first time.

The Standard List of Establishments is now virtually complete and is in use in all survey areas of the Bureau except Health and Welfare and Education. It includes approximately 120,000 establishments.

To an increasing extent economists analysing current affairs, as well as those in government and business, are appreciating the need for historical perspective, and could make use of historical data in readily available form. Accordingly, the Bureau is preparing to publish about 30 selected series extending into the inter-war period or longer, with and without corrections for seasonality, and with a description of the nature of the series and their discontinuities.

RETAIL TRADE, MOTOR VEHICLE SALES (More detail in Tables 48 and 76)

Total retail trade rose in December continuing the upward trend of the last few months. On a quarterly basis, retail trade has been rising gradually in the last year. Sales of American types of passenger cars have been increasing since September while in the same period European passenger cars have declined.

						new motor vehicle sales

[1] Gross National Product at market prices excluding accrued net income of farm operators from farm production.

[2] Before dividends paid to non-residents.

[3] Original data as in column 8, Table 80.

[4] Data for total housing starts and completions are not affected by the area changes mentioned in footnote 1, page S-5.

PRICES (More detail in Tables 29, 30, 31, 82, 83 and 100)

The indexes of industrial common stocks and thirty industrial materials increased noticeably in January.

The consumer price index edged upwards in January with increases in food, housing, recreation and reading outweighing decreases in clothing and transportation.

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. Source at bottom of Table 10.

[1] The data in Tables 17 to 27 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and domestic service. [3] Includes storage and communication. [4] Includes insurance and real estate. [5] Excludes public administration and defence and such community services as health and education. **Source: Employment and Payrolls, (72-002), D.B.S.**

[1] This index is composed of shelter and household operation. [2] This index is available for January, April and August only. [3] Total of commodities and services does not add up to 100 per cent; portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. **Sources: Prices and Price Indexes, (62-002); Price Index Numbers of Commodities and Services Used by Farmers, (62-004), D.B.S.**

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Industry values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] End of period. [5] Classified according to the Standard Industria Classification. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

[1] Releases of domestically manufactured tobacco for consumption in Canada. [2] End of period. [3] The production of beer is shown in thousand barrels of 25 gallons each. [4] Includes bottling of imported liquors. **Sources: Quarterly Stocks and Consumption of Unmanufactured Tobacco, (32-014), D.B.S., Department of National Revenue.**

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [2] Rough cords of 128 cu. ft. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D.B.S. Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

[1] Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Excluding shipments for re-processing at maker's own plants. [3] Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings. **Source: Primary Iron and Steel (41-001), D.B.S.**

[1] These totals include all generating agencies producing over ten million kilowatt hours per year. [2] These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. [3] Less imports. [4] Total net generation less net exports. [5] Mainly the amount used in electric boilers. **Source: Electric Power Statistics, (57-001), D.B.S.**

[1] Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. [2] The data on building permits are collected for 1,100 municipalities and individual figures are available on request. Some of the annual totals for 1960 and 1961 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. **Source: Building Permits (64-001), D.B.S.**

[1] The coverage was extended to 507 municipalities in 1948, and as of 1961, stands at 1,100, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D.B.S.**

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are ollected. [2] Planks and boards, flooring and square timber. [3] Hollow blocks including fireproofing and load-bearing tile. [4] For building insulation nly. [5] Figures cover the production of firms which normally account for 90 per cent of the total for Canada. [6] Includes concrete chimney blocks, up to ecember 1959. [7] Factory sales of firms which normally account for 96% of total Canadian production. **Source: Concrete Products (44-002), Products ode from Canadian clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board (36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire nd Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Sales of Paints, Varnishes and Lacquers (46-001) and Trade of Canada, ports (65-007), Exports (65-004), D.B.S.**

*See also Tables 29 and 30. [1] Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1961 are final prices. From August 1, 1961 to July 31, 1962, the western grain prices used in the index are final prices for oats and barley and initial prices for wheat. [2] Includes subsidy on hogs. [3] Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef. [4] Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. **Source: Coarse Grains Quarterly (22-001), Stocks of Meat and Lard (32-012), Index Numbers of Farm Prices of Agricultural Products (62-004), Livestock and Meat Trade Report, Dept. of Agriculture, D.B.S.**

[1] Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded.
[2] Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted.
[3] Annual data are monthly averages of crop year.
[4] Includes eggs for hatching.

[1] As at end of period. Last month is preliminary.
[2] Milk equivalents of cottage cheese and factory cheese other than cheddar, though not included in the monthly figures, are included in the monthly averages.
[3] Includes butter and cheese imported and "In Transit".

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted. [2] Includes stocks held by manufacturers, wholesalers and other warehouses. [3] The increase in percentage of capacity from October to November, 1960 reflects the fact that some mills worked more than the 25 days included in this formula as well as a reduction in total daily capacity from 171,000 hundredweight in October to 151,000 hundredweight in November. **Source: Grain Milling Statistics (32-003), Margarine Statistics (32-005), Quarterly Report on Processed Foods (32-007), D.B.S.**

[1] Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. [2] Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade. **Source: Retail Trade (63-005), D.B.S.**

[1] Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. [2] Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. [3] Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. [4] Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. Instalment credit includes conditional sales agreements only. [5] Amount owing to oil companies, excluding commercial accounts. [6] Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. [7] Figures for dates other than year ends are estimated on the basis of the loans by twelve companies. **Source: Department of Finance, Department of Agriculture, Bank of Canada.**

[1] As from January 1958 the indexes, the imports total and the "miscellaneous commodities" total exclude various non-commercial and special transactions previously included in our imports totals. For a more detailed explanation see Trade of Canada (Exports) 1960. [2] Includes pigs, ingots, blooms and billets, castings and forgings, ferro-alloys and rolling mill products. **Source: Trade of Canada, Imports (65-007), D.B.S.**

[1] Data in this table refer to railways with annual operating revenues of $500,000 or over. Monthly averages for 1960 and 1961 differ from the sum of the monthly data due to revisions which cannot be allocated by months. [2] Includes January to July interim payments related to recommendations of the Royal Commission on Railway Transportation. **Source: Railway Operating Statistics (52-003) monthly, (52-206) annual, D.B.S.**

[1] Revised series with coverage limited to business failures under the Bankruptcy and Winding Up Acts, excluding individuals not operating businesses as such. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002), D.B.S.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and undivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [6] Excluding Canadian day to day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of Canada Savings bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. [10] Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

[1] Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks. [2] Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada. [3] Less total float, i.e. cheques and other items in transit (net). [4] At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about $140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date. **Source: Statistical Summary of Bank of Canada.**

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales. [1]The Canada totals by months for 1960 and 1961 do not correspond to the sum of the provincial totals as revisions applied to the notional total are not yet available for the provinces. Neither the monthly figures for 1960 and 1961 nor the monthly averages for 1961 have been revised to agree with the Canada total. **Source: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.**

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (Excluding government-owned companies and incorporated co-operatives).

[1] Includes Tobacco, Leather and Miscellaneous Manufacturing Industries.

[2] Includes Electric Power, Gas and Water Utilities.

[3] Includes Community, Business and Personal Service Industries.

[4] Includes Agriculture, Forestry, Fishing and Construction.

A NOTE TO USERS

Changes in this issue:

(1) The original and seasonally adjusted data for the labour income series on page S–8 and in Tables 12 and 13 have been revised starting with January 1959.

(2) The seasonally adjusted series on average hourly earnings, average hours worked per week, consumer credit outstanding and tons of revenue freight loaded on page S–8 have been revised from January 1958 onward.

(3) Data for seasonally adjusted values of building permits on page S–5 and Table 58 have been revised back to January 1958.

(4) Data on housing starts and completions have been revised in 1962 on the basis of information from the 1961 census. In the recent census, more centers of 5,000 and over are enumerated and the boundaries of metropolitan areas have been changed. This data is therefore not entirely comparable with the earlier years which are based on the 1956 census.

(5) The seasonally adjusted housing starts and completions on page S–5 have been revised back to January 1961. Part of the revision in 1962 is due to the reasons mentioned in (4) above. The 1962 and 1963 figures are therefore not entirely comparable with the figures for earlier years.

Back Records:

The back records for the revised series mentioned in (1), (2), (3), (4) and (5) above are available on request from the Current Business Indicators Section, National Accounts and Balance of Payments Division. Those occurring in the S pages will also be appearing in Volume II of the Annual Supplement.

Interruption of Data:

Data on manufacturing inventories, shipments, new orders and unfilled orders as on page S–6 and Tables 32, 33, 34, 35, 36 and 37 are being revised according to the new Standard Industrial Classification. There will, however, be a delay of a few months before data for January 1963 onward, on the new basis, become available. In the meantime data to the end of 1962, on the old basis will remain in the above tables and continue to be carried.

Annual Subscription: $5.00 — Single copies: 50c. each

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information Services Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

ROGER DUHAMEL, F.R.S.C., Queen's Printer and Controller of Stationery, Ottawa, 1963

During the whole of the 20th century, in Canada as in many other countries, the population has been shifting from farms and rural non-farm communities into urban centres. The rate of industrial development has largely determined the extent of this shift. An increasing concentration of population in the largest centres has accompanied urbanization; improved methods of transportation have been an important factor in this development.

The Rural Urban Distribution of Population in 1961

On the date of the 1961 Census about 70 per cent of the Canadian population of 18,238,247 persons were residing in urban areas. The concentration of population in the largest cities is evidenced by the fact that close to two-thirds of the urban population was resident in urban centres of 100,000 and over. The rural population has steadily declined. In 1961, just over three-fifths of the rural population lived in towns, villages and settlements with less than 1,000 population and a little less than two-fifths on farms. The farm population amounted to just over one-tenth of the total population of Canada.

The rural urban distribution of population varied considerably as between provinces: Ontario, Quebec and British Columbia were the most urbanized provinces, the proportion of the population in urban areas being about 77 per cent, 74 per cent, and 73 per cent respectively. Of these three provinces, British Columbia had the smallest proportion – 5 per cent – residing on farms; about half the total population of this province lived in the metropolitan area of Vancouver. Prince Edward Island, with only about one-third of its population in urban areas, was the least urbanized of all the provinces; one-third of the population lived on farms. Among the remaining Atlantic provinces, about half of Newfoundland's population, somewhat more than half of Nova Scotia's population, and somewhat less than half of New Brunswick's population lived in urban areas. Despite the predominance of agriculture in the Prairie economy, close to two-thirds of the population of Alberta and Manitoba and over 40 per cent of the population of Saskatchewan lived in urban areas. Over half the total population of Manitoba lived in the metropolitan area of Winnipeg. With one-third of its population on the farm, Saskatchewan was in that respect in the same situation as Prince Edward Island. (See Table I).

Technical Note

One of the difficulties encountered in attempting to measure population shifts from rural to urban areas over the century is the lack of a uniform definition of "rural" versus "urban" over the whole period. Up until the 1951 Census the urban population was defined as the population residing in incorporated cities, towns and villages, while the remainder was treated as rural. In the 1951 Census the definition of urban was extended to include (1) the whole metropolitan area of cities having urbanized or built-up areas surrounding the city proper, (2) communities of 1,000 persons or more, whether incorporated or not; places of less than 1,000 population were excluded, whether incorporated or not. In the 1956 Census, the definition of urban was further extended to include (1) the suburban areas of additional "major" urban centres, other than census metropolitan areas, (2) municipalities predominantly urban in character on the boundaries of certain metropolitan areas. In the 1961 Census, it was decided to include as urban the built-up residential areas surrounding all cities and towns with a population of 10,000 or more in the whole agglomeration. At the same time, a population density ratio was used to determine urbanized areas, with the result that some of the fringe part of certain metropolitan areas was defined as rural.

Beginning with the 1931 Census, the rural farm segment of the rural population was compiled separately from the total rural population. The "farm" population refers to the population living on farms in localities classed as rural. The definition of "farm" and "rural" also raises difficulties. In the 1951 and 1956 Censuses, a farm was defined as a holding on which agricultural operations were carried out, and which was (a) 3 acres or more in size, or (b) 1 to 3 acres in size with agricultural production during the previous year valued at $250 or more. In the 1961 census a farm was defined as a holding of 1 acre or more with sales of agricultural products valued at $50 or more.

In order to achieve comparability over time, census figures have to be adjusted to a common definition.

TABLE I. Number and Per Cent of the Population Rural and Urban, for Canada and the Provinces, 1961

Province	Total population	Rural						Urban	
		Total		Farm[1]		Non-farm			
		No.	%	No.	%	No.	%	No.	%

[1] Exclusive of 55,615 persons living on farms in localities classed as "Urban".

Rural Urban Population Trends

The urban population has been an increasing proportion of the total at every Census date since 1891. Urbanization has proceeded unevenly over time; the shift was taking place most rapidly in the first decade of this century when the urban population increased by over 60 per cent, compared with an approximate 35 per cent increase for the population as a whole. By 1951, over 57 per cent of the population resided in urban areas compared with only 32 per cent in 1891 and about 50 per cent in 1921. (These figures are based on the definition of urban used up to the 1951 Census, whereby any incorporated city, town or village was classed as urban. See Table II).

TABLE II. Numerical and Percentage Distribution of the Population by Rural and Urban,[1] for Canada, 1891-51

[1] Based on population living in incorporated areas.
[2] Not including Newfoundland.

As for the farm population, (information is not available before 1931) it declined sharply between 1931 and 1951, with much the greater part of the decline taking place between 1941 and 1951, when war and post-war employment opportunities in the cities attracted population from the farms. In fact, in the depressed conditions of the thirties, there was some tendency for population to flow back to the farms; some provinces, namely Quebec and Alberta, experienced an increase in the farm population in the decade 1931-41. In the period 1941-51, the exodus from the farms was greatest in Saskatchewan (23 per cent), closely followed by Nova Scotia (20 per cent). The decline in the farm population of Ontario in the period 1941-51 was only 2 per cent, much lower than in any other province, but in the preceding decade it was several times larger than the national average. (See Table III).

TABLE III. Farm Population and Percentage Decline, for Canada and the Provinces, 1931-51

	Farm population			Decrease			
				1931-41		1941-51	
	1931	1941	1951	No.	%	No.	%

British Columbia	99,333	98,177	109,983	1,156	1.2	+11,806	+12.0

[1] Not including Newfoundland, Yukon and Northwest Territories.

The exodus from the farms continued in the decade 1951-61, with the major part of the decline taking place in the second half of the period, when the farm population fell by 15 per cent, compared with 5 per cent between 1951 and 1956. The greatest decline between 1951 and 1961 was in the Atlantic Provinces of Prince Edward Island, Nova Scotia and New Brunswick, particularly the latter, and in Ontario, Manitoba and Saskatchewan. It is related to the rapid progress of mechanization as well as to the generally high level of employment opportunities in urban areas. Quebec, Alberta and British Columbia were below the national average. (See Table IV).

TABLE IV. Farm Population and Percentage Decline, for Canada and the Provinces, 1951-61

	Farm population			Decrease

[1] Based on the 1956 definition of farm.
[2] Not including Yukon and Northwest Territories.

Between 1951 and 1961 the urban population of Canada increased 47 per cent and by the end of the period over 70 per cent of the population was living in urban areas, compared with 63 per cent in 1951 and 67 per cent in 1956. Much the most rapid rate of urbanization took place in the province of Alberta where the urban population increased nearly 90 per cent in the decade. This spectacular rate of growth reflects the increase of population in metropolitan Calgary and Edmonton, following the discovery of new resources of fuel and power beginning in 1947. The progress of urbanization also exceeded the national average in Saskatchewan, British Columbia and Newfoundland. Ontario and Quebec fell a little below the national average of 47 per cent. The lowest rate of increase in urban population in this period was the 17 per cent increase in the province of Nova Scotia. (These comparisons are derived from a classification of the rural urban population over the 1951-61 period according to the definition used in the 1956 Census. See Table V).

[1] Areas as defined for 1956 Census.
[2] Includes Yukon and Northwest Territories.

Since the beginning of the century, the shift from rural to urban living has been accompanied by increasing relative importance of the larger cities as centres of population. In 1961 there were 922 incorporated cities, towns and villages of 1,000 and over (including Newfoundland), compared with 325 in 1901. The population in the incorporated centres accounted for 35 per cent of the total population in 1901 and 58 per cent in 1961. Of the urban population, 26 per cent resided in cities of 100,000 and over in 1901 compared with nearly 40 per cent in 1961. The proportion in the size group 10,000 to 29,999 also increased relatively rapidly,—from about 12 per cent in 1901 to roughly 18 per cent in 1961; the proportion in the size group 30,000 to 99,999 rose slightly—from 18 per cent to 21 per cent. On the other hand, the smallest centres dwindled in importance; the proportion in the size groups 5,000 to 9,999 and 1,000 to 4,999 fell from 15 per cent to 9 per cent in the one case and from 29 per cent to 13 per cent in the other. (See Table VI).

The development of metropolitan areas is an important feature of urban growth in Canada. In 1941, 12 Census metropolitan areas were defined, in 1951, 15, and in 1961, 17. The growth of metropolitan areas is associated with industrialization and improved means of transport.

In the decade 1941 to 1951 the rate of growth of population in metropolitan areas (about 27 per cent) was substantially lower than in the following decade. Between 1951 and 1961 the population in the 17 metropolitan areas defined for the 1961 Census increased 45 per cent, compared with an increase of 47 per cent for the urban population as a whole. The rate of increase in the first and second halves of the decade was about the same. Much the most rapid rates of increase in the decade took place in Calgary (96 per cent) and Edmonton (91 per cent). Toronto and Sudbury, with rates of growth of about 50 per cent, rank next. (See Table VII).

TABLE VII. Total Population and Percentage Increase for Census Metropolitan Areas, 1951-61, 1951-56, and 1956-61

Metropolitan area[1]	Population			Percentage increase		
	1951	1956	1961	1951-1961	1956-1961	1951-1956
All metropolitan areas	**5,637,075**	**6,805,881**	**8,163,986**	**44.8**	**20.0**	**20.7**
Calgary	142,315	201,022	279,062	96.1	38.8	41.3
Edmonton	176,782	254,800	337,568	91.0	32.5	44.1
Halifax	133,931	164,200	183,946	37.3	12.0	22.6
Hamilton	280,293	338,294	395,189	41.0	16.8	20.7
Kitchener	107,474	128,722	154,864	44.1	20.3	19.8
London	128,977	154,453	181,283	40.6	17.4	19.8
Montreal	1,471,851	1,745,001	2,109,509	43.3	20.9	18.6
Ottawa	292,476	345,460	429,750	46.9	24.4	18.1
Quebec	276,242	311,604	357,568	29.4	14.8	12.8
Saint John	78,337	86,015	95,563	22.0	11.1	9.8
St. John's	68,620	79,153	90,838	32.4	14.8	15.3
Sudbury	73,826	97,945	110,694	49.9	13.0	32.7
Toronto	1,210,353	1,502,253	1,824,481	50.7	21.4	24.1
Vancouver	561,960	665,017	790,165	40.6	18.8	18.3
Victoria	113,207	133,829	154,152	36.2	15.2	18.2
Windsor	163,618	185,865	193,365	18.2	4.0	13.6
Winnipeg	356,813	412,248	475,989	33.4	15.5	15.5

[1] Based on areas as defined for the 1961 Census. Where these differ from earlier years, the 1956 and 1951 counts have been adjusted to the 1961 areas.

Much of the growth of population in metropolitan centres has taken place in the suburban areas surrounding the city proper. In 1961, about 55 per cent of the population in the metropolitan areas resided in the city proper or central city and 45 per cent in the suburban fringe. On the basis of the 15 metropolitan areas, in 1951 a little less than one-third, and in 1941 one-quarter of the metropolitan area population resided in the suburbs.

The rates of growth for the city proper and the suburban fringe vary widely as between individual metropolitan areas. This disparity is accounted for by differences in municipal organization and administration, the rate of annexation and other factors. In many of the older cities, where there was little undeveloped land, growth has necessarily taken place outside the city limits. Among the large cities only Calgary and Edmonton has city boundaries extending well beyond the downtown areas and it is only in these metropolitan centres that any substantial part of the population growth between 1951 and 1961 took place within the city proper.

For the metropolitan centres as a group, the rate of population growth in the cities proper between 1951 and 1961 was 16 per cent while the rate of growth for the suburban areas was 97 per cent. The high rates of growth in the city proper in Calgary and Edmonton have already been referred to. In the Calgary metropolitan area, 63 per cent of the total growth took place in the city proper and the corresponding figure for metropolitan Edmonton is 72 per cent. By contrast, in the largest metropolitan areas, Montreal, Toronto, Vancouver and Winnipeg, around two-thirds (in the case of Montreal) or more of its population growth took place in the suburbs — in the case of metropolitan Toronto all of its growth occurred in the suburbs. Apart from Calgary and Edmonton, the cities in which there was a rate of increase of population in the city centre well in excess of the national average are Ottawa and St. John's. The extension of the city boundaries of Ottawa shortly before the 1951 Census is perhaps the principal reason why the growth in the city centre was almost as important as the growth in the suburban fringe. (These figures are based on metropolitan areas as defined for the 1956 Census. See Table VIII).

TABLE VIII. Rates and Distribution of Population Increase in Census Metropolitan Areas Between Cities Proper and Suburban Parts, 1951-61

Metropolitan area	Population[1]			Per cent increase 1951-61		
	1951	1956	1961	Met. area	City proper	Suburban part

---

[1] Areas of 1956 Census.

Components of Population Growth in Metropolitan Areas, 1951-61

Natural increase and net migration made about the same contribution to population growth in metropolitan centres in the decade 1951 to 1961. Each contributed an increase of about 21 per cent, or one million persons to the metropolitan area population.

The two factors were of widely different importance in the individual metropolitan centres. The spectacular growth of Calgary and Edmonton during the period are attributable to exceptionally high rates of net migration combined with rates of natural increase well above the average for all metropolitan centres. Heavy in-migration itself will bring about a rise in the rate of natural increase since many in-migrants will be couples at the younger ages. In Toronto, Vancouver, and Victoria metropolitan areas, the major contribution to population growth came from net migration. By contrast, in the metropolitan areas in the Atlantic region and in the province of Quebec, natural increase was the more important factor. Since there was some loss of population from net migration in Windsor, natural increase accounts for all the population growth in that area.

INDUSTRIAL PRODUCTION (More detail in Table 11)

The index of industrial production was unchanged in January. With both mining and manufacturing lower, the index was held up by a large gain in electric power and gas utilities.

	total industrial production	manufacturing production			mining production	electricity and gas	total iron and steel
		total	durables	non-durables			
				1949 = 100

RETAIL TRADE, MOTOR VEHICLE SALES (More detail in Tables 48 and 76)

Retail trade fell by about one per cent in January but was still at a high level. The decline was primarily due to the decrease in sales of motor vehicle dealers.

All sales of new motor vehicles, except European passenger cars, decreased in January.

		retail trade total	retail trade (ex. motor vehicle dealers)	motor vehicle dealers	department stores	new motor vehicle sales: total	new motor vehicle sales: American type passenger	new motor vehicle sales: European type passenger	new motor vehicle sales: total commercial

---

[1] Starting in January 1962, the data are not entirely comparable with earlier years because more centers are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

MANUFACTURING INVENTORIES, SHIPMENTS, ORDERS (More detail in Tables 36 and 37)[1]

Manufacturing shipments and new orders rose again in December while inventories and unfilled orders remained virtually unchanged. New orders in machinery and construction goods were up while shipments of primary iron and steel fell irregularly.

		all industries				new orders mochinery	new orders construction goods	shipments primory iron ond steel	ratio of inventories to shipments
		owned inventories	shipments	new orders	unfilled orders

	4						2,421	126r	132r	797

[1] Gross National Product at market prices excluding accrued net income of farm operators from farm production.

[2] Before dividends paid to non-residents.

[3] Original data as in column 8, Table 80.

[4] Data for total housing starts and completions are not affected by the area changes mentioned in footnote 1, page S-5.

PRICES (More detail in Tables 29, 30, 31, 82, 83 and 100)

The index of industrial common stocks decreased in February.

Between January and February the consumer price index edged up from 132.0 to 132.1. Increases in the food, clothing, health and personal care and tobacco and alcohol indexes offset a decline in the transportation index.

		wholesale general index	thirty industrial materials	export prices	import prices	industrial common stocks	consumer price index (1949=100)

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stacks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the seires. [2] Includes residual error of estimate. Source at bottom of Table 10.

[1] The data in Tables 17 to 27 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and domestic service. [3] Includes storage and communication. [4] Includes insurance and real estate. [5] Excludes public administration and defence and such community services as health and education. **Source: Employment and Payrolls, (72-002), D.B.S.**

[1] See footnote 1, Table 17.

[2] See footnote 2, Table 17.

[3] Employment indexes in manufacturing and in its durable and non-durable components are given in Table 17.

[4] In addition to those listed, tobacco products, leather, printing and publishing and miscellaneous industries are included in non-durable manufacturing.

[1] Monthly shipments represent an estimated projection of the latest available Census of Industry values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted.

[2] Total manufacturing inventory owned by manufacturers including warehouse stocks.

[3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month.

[4] End of period.

[5] Classified according to the Standard Industrial Classification.

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [2] Rough cords of 128 cu. ft. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D.B.S. Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

[1] Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Excluding shipments for re-processing at maker's own plants. [3] Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings. **Source: Primary Iron and Steel (41-001), D.B.S.**

---

[1] Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. [2] The data on building permits are collected for 1,100 municipalities and individual figures are available on request. Some of the annual totals for 1960 and 1961 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. **Source: Building Permits (64-001), D.B.S.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1961, stands at 1,100, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D.B.S.**

[1] Footnote and Source are at Bottom of Table 63. [2] Starting in January 1962, the data are not entirely comparable with earlier years because more centres are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected.

[2] Planks and boards, flooring and square timber.

[3] Hollow blocks including fireproofing and load-bearing tile.

[4] For building insulation only

[5] Figures cover the production of firms which normally account for 90 per cent of the total for Canada.

[6] Includes concrete chimney blocks, up to December 1959.

[7] Factory sales of firms which normally account for 96% of total Canadian production.

Source: Concrete Products (44-002), Products made from Canadian clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board (36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Sales of Paints, Varnishes and Lacquers (46-001) and Trade of Canada, Imports (65-007), Exports (65-004), D.B.S.

*See also Tables 30 and 31. [1]Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1961 are final prices. From August 1, 1961 to July 31, 1962, the western grain prices used in the index are final prices for oats and barley and initial prices for wheat. [2]Includes subsidy on hogs. [3]Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef. [4]Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. **Source: Coarse Grains Quarterly (22-001), Stocks of Meat and Lard (32-012), Index Numbers of Farm Prices of Agricultural Products (62-004), Livestock and Meat Trade Report, Dept. of Agriculture, D.B.S.**

[1] Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. [2] Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. [3] Annual data are monthly averages of crop year. [4] Includes eggs for hatching.

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted. [2] Includes stocks held by manufacturers, wholesalers and other warehouses. [3] The increase in percentage of capacity from October to November, 1960 reflects the fact that some mills worked more than the 25 days included in this formula as well as a reduction in total daily capacity from 171,000 hundredweight in October to 151,000 hundredweight in November. **Source: Grain Milling Statistics (32-003), Margarine Statistics (32-005), Quarterly Report on Processed Foods (32-007), D.B.S.**

[1] Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. [2] Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade. **Source: Retail Trade (63-005), D.B.S.**

[1] Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. [2] Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. [3] Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. [4] Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. Instalment credit includes conditional sales agreements only. [5] Amount owing to oil companies, excluding commercial accounts. [6] Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. [7] Figures for dates other than year ends are estimated on the basis of the loans by twelve companies. **Source: Department of Finance, Department of Agriculture, Bank of Canada, Credit Statistics (61-004), D.B.S.**

[1] As from January 1958 the indexes, the imports total and the "miscellaneous commodities" total exclude various non-commercial and special transactions previously included in our imports totals. For a more detailed explanation see Trade of Canada (Exports) 1960. [2] Includes pigs, ingots, blooms and billets, castings and forgings, ferro-alloys and rolling mill products. **Source: Trade of Canada, Imports (65-007), D.B.S.**

[1] Data in this table refer to railways with annual operating revenues of $500,000 or over. Monthly averages for 1960 and 1961 differ from the sum of the monthly data due to revisions which cannot be allocated by months. [2] Includes January to July interim payments related to recommendations of the Royal Commission on Railway Transportation. **Source: Railway Operating Statistics (52-003) monthly, (52-206) annual, D.B.S.**

[1] Revised series with coverage limited to business failures under the Bankruptcy and Winding Up Acts, excluding individuals not operating businesses as such. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002), D.B.S.**

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and undivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [6] Excluding Canadian day to day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of Canada Savings bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. [10] Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

[1] Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks. [2] Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada. [3] Less total float, i.e. cheques and other items in transit (net). [4] At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about $140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date. **Source: Statistical Summary of Bank of Canada.**

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales. [1]The Canada totals by months for 1960 and 1961 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1960 and 1961 nor the monthly averages for 1961 have been revised to agree with the Canada total. **Source: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.**

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (Excluding government-owned companies and incorporated co-operatives).

[1] Includes Tobacco, Leather and Miscellaneous Manufacturing Industries.
[2] Includes Electric Power, Gas and Water Utilities.
[3] Includes Community, Business and Personal Service Industries.
[4] Includes Agriculture, Forestry, Fishing and Construction.

SHOULD HAVE READ

Catalogue *No. 62-520*, Queen's Printer, Ottawa, 50c.

Changes in this issue:

(1) The unadjusted and seasonally adjusted data on Gross National Product and Expenditure on page S-9 and Tables 6, 7, 8, 9, 10 have been revised from the first quarter 1959 onward.

(2) Data on Rubber (Table 39) formerly expressed in thousand long tons have been reconverted and are now shown in million pounds.

(3) Data on Building Permits (see Tables 59 and 60) formerly expressed in thousand dollars will now be shown in million dollars.

Interruption of Data:

Data on manufacturing inventories, shipments, new orders and unfilled orders as on page S-6 and Tables 32, 33, 34, 35, 36 and 37 are being revised according to the new Standard Industrial Classification. There will, however, be a delay of a few months before data for January 1963 onward, on the new basis, become available. In the meantime, data to the end of 1962, on the old basis will remain in the above tables and continue to be carried.

Annual Supplement:

The second volume of the Annual Supplement will appear shortly and will supersede Volume I distributed last year. It will contain the historical record and the latest revised figures adjusted and not adjusted for seasonality of all the series appearing in the "S" section of the Review.

As formerly, it can be kept up-dated by referring to the current issues of the Review. The foreword in the Supplement will describe in more detail how it is to be used and its relationships to previous Supplements to the Review.

Annual Subscription: $5.00 — Single copies: 50c. each

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information Services Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

NATIONAL ACCOUNTS – INCOME AND EXPENDITURE
FOURTH QUARTER AND PRELIMINARY ANNUAL
1962

Introductory Review

Gross National Product rose to $40,401 million in 1962, an 8 per cent advance over the previous year. This expansion represented the largest year-to-year gain since 1956 when the economy was stimulated by an exceptionally high level of capital expenditure. Price increases were moderate in 1962, accounting for less than 2 per cent of the increase in Gross National Product, leaving a gain in volume of a little more than 6 per cent.

All the main components of Gross National Expenditure contributed to the increase in the aggregate. Consumer spending, which rose more than 5 per cent, was a major expansionary influence. The strength in the consumer sector was particularly evident in the first and last quarters of the year; purchases of durables, notably passenger cars, were especially heavy in the fourth quarter. The increase in consumer spending was accompanied by a large rise in personal income and personal saving. Investment in fixed capital resumed its upward course, the bulk of the increased outlays being for machinery and equipment. Except in the third quarter, the accumulation of business inventories made only a modest contribution to the expansion of economic activity. With a near record crop in 1962, in contrast to a poor crop in 1961, there was a considerable accumulation of farm inventories in place of the liquidation of a year earlier. Largely in response to a higher level of demand in the United States, exports of goods and services were up nearly 8 per cent while imports also rose but not to the same extent; these increases reflect, in part, the lower exchange value of the Canadian dollar. Government expenditure was up substantially, mainly reflecting larger outlays at the provincial-municipal level.

The salient developments on the income side were a 7 per cent rise in labour income, an 11 per cent increase in corporate profits, and a sharp expansion in accrued farm income, largely a reflection of a near record crop. Personal income rose at about the same rate as national income.

A brief review of the developments, in current dollars, over the entire period since the trough in economic activity in the first quarter of 1961, cast in terms of major demand components of Gross National Expenditure and compared with the recoveries of 1954-56 and 1958-59, reveals some interesting changes in patterns.

Changes in Components of Gross National Expenditure and Other Data

INDEX OF G.N.P. (EX. FARM) OVER 8 QUARTERS OF POST-WAR EXPANSIONS

BASED ON SEASONALLY ADJUSTED DATA

The relative overall strength of the present recovery rests mid-way between the exceptionally sharp rise in production in the 1954-56 period and the moderately paced increase in 1958-59. The underlying strength of the 1954-56 expansion in domestic demand was not fully reflected in Canadian production because of the high proportion which was met by imports of goods and services. In that respect, the present recovery differs from both the two previous expansions.

[2] Columns will not add to 100.0 exactly as residual error of estimate is omitted.

Exports of Canadian goods and services have been strong in 1961-62, and the rise of 16 per cent has out-paced that of the 1958-59 period. However, probably one of the most important developments in the expansion has been the apparent emergence of a slow-down in the rate of increase of imports. This has occurred over a period of considerable price rises reflecting exchange depreciation and in the latter half of 1962, temporary import surcharges. A larger proportion of demand is currently being met from Canadian production; the rise in imports was 6 per cent compared with 13 per cent in 1958-59 and 33 per cent in 1954-56.

Capital spending on housing and business plant and equipment has shown considerably more strength than in 1958-59, particularly non-residential construction. However, the demand for fixed capital is not exerting the same degree of expansionary pressure as in 1954-56. Demands on production for purposes of inventory accumulation were small in the current period compared with the two earlier periods, partly because of ample supplies, relative price stability and the fact that no major reduction in stocks took place during the prior business slow-down.

Over the seven quarters since the beginning of 1961 to the end of 1962 consumer and government spending on goods and services both moved ahead by about 10 per cent, although increased spending by consumers accounts for a much lower proportion of the increase in Gross National Expenditure in the current period than in the 1958-59 expansion.

Production and Employment

Real output for 1962 was higher by just over 6 per cent than the corresponding figure for 1961. If agriculture is excluded this increase amounted to about 5 per cent. The 8 per cent gain in the goods-producing industries is reduced to 7 per cent in the same manner.

Manufacturing, with an 8 per cent gain was the largest single contributor to the expansion during 1962, accounting for approximately one-third of the total increase. The considerable advance (11 per cent) in the cyclically volatile durables component formed the basis for this growth, with particular strength occurring in the transportation equipment and the electrical apparatus and supplies groups. Iron and steel and non-metallic mineral products increased by 9 per cent each. Non-durable manufacturing during 1962 continued to expand, showing a 5 per cent increase over 1961, with the largest gain of any major industry group in textile products (8 per cent), and the smallest (2 per cent) in the leather and clothing product groups.

Considerable gains were also made in mining and forestry, which increased by about 7 per cent each, while construction expanded by 2 per cent.

The service-producing industries showed a 4 per cent gain, about two-fifths of which was accounted for by a considerable increase in wholesale trade (8 per cent), and retail trade (4 per cent), which paralleled the rapid expansion in manufacturing output. The most significant development within retail trade was an 11 per cent increase in the motor vehicle dealer component. Oil and gas pipeline transport accounted for about half of the 4 per cent increase in transportation, as the growth in output of this industry was well above average. The only major decline (12 per cent) occurred in storage, largely as a result of declines in the volume of receipts and shipments at grain elevators during the first part of the year. Public administration and defence showed a smaller than average gain (2 per cent), while electric power and gas utilities increased by 6 per cent. The remaining service-producing industries continued their steady advance, increasing by approximately 4 per cent.

Employment by Industry[1]

(Estimates in thousands)

	Average year 1961	Average year 1962	Per cent change men	Per cent change women	Per cent change total
Agriculture	674	653	- 4.1	8.8	- 3.1
Other primary industries	183	177	- 2.8	[2]	- 3.3

Total employed ex. agriculture	**5,375**	**5,564**	**3.6**	**3.5**	**3.5**

[1] Includes self-employed persons and unpaid family workers.

[2] Total number of women employed in other primary industries is less than 10,000.

The market for labour improved in 1962. The total number of employed persons increased by nearly 3 per cent, and the non-agricultural component of this number increased by 3½ per cent. In contrast to the previous year, when the rate of rise in the employment of women substantially exceeded that of men, both men and women shared equally in the increase in 1962. Gains in employment occurred in all industries except agriculture and other primary industries, the largest increase being in construction and non-government service (community, business, personal, and recreational service). The average rate of unemployment in 1962 was 5.9 per cent of the labour force, compared to the rate of 7.2 per cent in 1961.

The changes in male, female and total employment by broad industry groups are shown in the accompanying table.

Value, Volume and Price

Prices rose appreciably more in 1962 than in the previous year. All the major components of demand showed price increases, ranging from 1.5 per cent in consumer expenditure to 3.7 per cent in government expenditure. Prices of imports rose 4.4 per cent, largely as a result of the depreciation of the Canadian dollar. This increase is not reflected in the overall implicit price index of Gross National Expenditure since imports are excluded by definition from Canada's Gross National Product.

In volume terms, all components with the exception of non-residential construction advanced from 1961 to 1962. Year-to-year changes in value, volume, and price are given in the accompanying table.

Per cent Changes — Value, Volume, and Price

	1960 1959			1961 1960			1962 1961		
	Value	Volume	Price[1]	Value	Volume	Price[1]	Value	Volume	Price[1]

Imports of goods and services	0.5	- 0.5	1.0	4.5	1.1	3.3	5.7	1.3	4.4
Gross National Expenditure	3.8	2.2	1.6	3.2	2.6	0.6	8.0	6.2	1.7

[1] Implicit price indexes.

In contrast to the year-to-year change, the following table shows that the value increase of 5.7 per cent from the fourth quarter 1960 to the fourth quarter 1961 was almost as large as the 6.9 per cent which occurred during the same time span ending in 1962. However, a major part of the price increase from the end of 1960 to the present occurred within 1962 and consequently, the volume of production showed a smaller gain during 1962 than 1961.

Per cent Changes — Value, Volume, and Price

	4Q 1961 4Q 1960			4Q 1962 4Q 1961		
	Value	Volume	Price[1]	Value	Volume	Price[1]
Personal expenditure	4.1	3.5	0.6	5.0	3.1	1.9

Gross National Expenditure	5.7	5.4	0.3	6.9	4.2	2.6

[1] Implicit price indexes.

In the current period, prices increased by about one-half per cent from the third to the fourth quarter, about the same magnitude as the increase in the previous quarter.

Personal Expenditure

A strong upward movement from the fourth quarter of 1961 in a number of income components raised the level of personal disposable income 6½ per cent by the final quarter of 1962. This increase allowed a strong expansion in consumer spending and also a higher level of personal net saving.

The expansion of 5 per cent in personal expenditure, which took place mainly in the first and final quarters of the year, was the strongest since the expansion in 1959 and was largely attributable to a particularly sharp increase in net purchases of new and used automobiles—motor vehicle dealers' sales rose by 11 per cent. Purchasing of durable goods in total was higher by 8 per cent in 1962 in contrast to the lack of any strong movement in either of the years 1960 and 1961; prices were unchanged, indicating an equivalent rise in volume. Consumer spending on non-durable goods also rose but more in line with the annual increases which have been experienced in recent years. An increase of 5 per cent from 1961 to 1962 compares with 4 per cent in the two previous years. A part of this slightly larger increase reflects the first full-year's impact of the Ontario Sales Tax which was introduced in September 1961. Spending on food, tobacco and alcohol all contributed to the overall picture of strength as their rate of increase was significantly higher than between 1960 and 1961. Price increases of about 1 per cent associated with consumer goods in total were mainly a reflection of non-durable good price increases.

Personal Expenditure — Per cent Change

	Year 1960 to Year 1961	Year 1961 to Year 1962
Total non-durables	4.0	5.1
Food	1.7	3.3
Clothing	1.6	3.7
Other	8.2	7.8
Total durables	1.1	8.0
New and used automobiles	0.5	14.0
Other	1.6	2.8
Total goods	3.5	5.6
Total services	5.2	4.5
Total personal expenditure	4.1	5.2

There was a continuation of the slackening rate of increase in personal expenditure on services which has been apparent in recent years—expenditures rose by 4½ per cent. In part, this reflected significant movements in personal spending of non-residents in Canada and of Canadians travelling abroad. Abstracting this influence, outlays for services increased by 6 per cent. The increases were general, although a diminished rate of growth in spending on shelter was noticeable as increases in rental rates became less pronounced, a tendency which has become apparent since 1960.

Business Gross Fixed Capital Formation

Capital expenditure in 1962 amounted to $7.0 billion, nearly 5 per cent higher than in the previous year. Roughly similar rates of increase, over 8 per cent, occurred in outlays for housing and for machinery and equipment; expenditure on non-residential construction showed little change. Total capital outlays anticipated by business for the year 1963, as published in "Private and Public Investment in Canada-Outlook, 1963" are 4½ per cent higher than those realized in 1962. However, the strength this year is expected in outlays for non-residential construction and to a lesser extent in outlays for machinery and equipment; expenditure for housing is expected to be somewhat lower than in 1962.

The rise in fixed capital formation in 1962, mainly a result of the strength in demand for producers' durable equipment, occurred in the first three quarters of the year. This strength was centred in the primary metal manufacturing industries, mining and agricultural sectors of the economy, the latter probably reflecting to some extent spending from the higher farm incomes received during the year. Although there was little change from 1961 to 1962 in the value of construction of non-residential buildings and works, there were offsetting movements within the year. Expansion took place in spending for plant and equipment by manufacturers; the utilities spending programme appeared on balance slightly lower, with increased spending by electric power and telephone utilities more than offset by completion of a large-scale pipeline construction programme. Offsets also occurred between higher outlays by the agricultural and fishing industries and lower mining construction spending.

The rise in housing expenditure in 1962 reflects the increase not only of a higher number of housing starts, but a larger carry-over of houses under construction at the beginning of 1962 than in the previous year. Starts rose from 125,577 in 1961 to 130,095 in 1962, approximately 4 per cent, while completions were higher by 9½ per cent, increasing from 115,608 in 1961 to 126,682 in 1962. The increase in starts of rental dwellings more than offset a decline in starts of dwellings for home-ownership, and partly associated with this trend was an increase in conventional mortgage lending and a shift away from financing under the National Housing Act.

Although expenditure on housing of $1,577 million in 1962 showed a sharp increase of more than 8 per cent above 1961 and starts were relatively stable during the year, there was some evidence of weakening in the final quarter of the year; however, dwelling starts in centres of population of 5,000 or more were stronger again in the opening months of 1963.

Investment in Non-farm Business Inventories

Investment in business inventories played only a small part in the expansion of Gross National Product in 1962. For the year as a whole the addition to stocks amounted to $375 million, although in the third quarter of the year stock-building at an annual rate of $800 million was very important.

The largest build-up of stocks occurred in manufacturing industries, with widespread accumulation in both durable and non-durable lines. The ratio of stocks to shipments throughout the year remained below the average of the previous year.

Non-farm Business Inventories

Industry	1958	1959	1960	1961	Quarters 1962 (Seasonally adjusted at annual rates)				1962
					(1)	(2)	(3)	(4)	
	millions of dollars								
Manufacturing	- 149	151	104	81	128	- 12	396	156	167
Wholesale	- 44	123	18	87	- 48	- 96	72	132	15
Retail	10	123	192	111	- 40	232	388	- 16	141
Other	- 14	24	- 39	- 3	160	204	- 56	- 100	52
Totals	**- 197**	**421**	**275**	**276**	**200**	**328**	**800**	**172**	**375**

The accumulation of stocks in wholesale trade was virtually negligible, the liquidation in the first half of the year being largely offset by accumulation in the second.

There was a considerable accumulation of stocks in the hands of retail dealers. Most of this accumulation was in the hands of automotive dealers, where sales were sharply higher and stocks had been drawn down slightly in the previous year.

Exports and Imports of Goods and Services

Some of the most notable developments of the year occurred in the field of foreign trade where both exports and imports of goods and services rose to record levels. Exports amounted to $8.2 billion, close to 8 per cent higher than in 1961, the rate of increase for goods being somewhat higher than for services. At the same time, imports of goods and services reached a value of $9.0 billion, nearly 6 per cent above the level of 1961, all the increase was in the merchandise part of the account. The result was that the deficit on international current account fell from about $0.9 billion to about $0.8 billion; all of the improvement occurring in the non-merchandise items.

The pattern of trade in 1962 was affected, among other things, by the stabilization of the Canadian dollar in May at 92½ cents in terms of United States currency. Furthermore, the foreign exchange crisis in June 1962 culminated in government action to relieve pressure on the Canadian dollar, to bring about a greater stabilization in Canada's international transactions, and to strengthen the exchange reserves. The net effect of these factors in terms of Canadian production was to contribute to an increase in exports of Canadian goods and services and to lower the portion of domestic demand being met from foreign sources. The deficit with non-residents on current account, on a year-to-year basis, showed a fairly small change but within the year it declined progressively from just over $1.0 billion in the first quarter to less than half that in the final quarter, although some of this improvement may have been due to a decline in imports from an irregularly high third quarter level.

The rise in exports of goods occurred mainly in the second quarter of the year, but the high level was sustained throughout the remainder of the year. It is attributable in part to the economic expansion in the United States (the increase in exports to the United States on a year-to-year basis was greater than the total increase in exports), in part to the effect of changes in the exchange rate, and in part to aggressive export sales promotion by both business and government. Although newsprint and wheat remained the two principal commodity exports, the level of exports for both of these was lower than in 1961. The major gains were in sales abroad of iron ore, crude petroleum and natural gas. Of less importance in dollar terms, but items in which very substantial advances were recorded, were non-farm machinery, aircraft and parts, aluminum and lumber and products. Almost three-quarters of the increase in exports was attributable to the commodity groups noted above.

Exports and Imports of Merchandise and Services

Totals	**8,542**	**8,972**	**9,176**	**9,144**	**8,840**	**9,033**	**-3.3**	**5.7**

Receipts for services also rose sharply between the first and second quarter and then remained at the new high level. This increase was primarily due to the increased travel expenditures of foreigners, encouraged in part by the more favourable rate of exchange, and to an increase in receipts of interest, and freight and shipping services resulting from the increased volume of merchandise exports, such as iron ore, petroleum and natural gas.

Imports of goods rose through the first three quarters of the year, in spite of an unfavourable exchange rate, which raised the price of imports to Canadians, and in spite of the imposition of an import surcharge on certain classes of goods at mid-year, which had the same effect. However, in the final quarter of the year imports fell off sharply, reflecting in part the earlier changes, including the unusually high level of the previous quarter. Even with this decline at the year-end, imports of goods for the year were the highest on record, although some of the increase was, as in exports, due to the change in the exchange rate. Although details of imports for the full year are not as yet available, the figures for the first three quarters of the year indicate a particularly sharp pick-up in non-farm machinery, electrical apparatus, automobiles and parts, all of which are consistent with the strong demand, noted earlier, for producers' durables and automobiles. However, increases in the level of imports seem general and occur in almost all classes of goods on a year-to-year basis. About 80 per cent of the annual increase in merchandise imports arose from increased purchases from the United States.

Payments for services rose to a peak in the second quarter of 1962, reflecting accelerated transfer of interest and dividends on non-resident investment, larger payments for business services and the continued high level of Canadians' travel expenditures abroad; they fell back in the third quarter and remained stable in the latter part of the year. The reductions were largely a result of lower travel expenditures, a reduced rate of payments of dividends, and a decline in miscellaneous expenditures.

The Government Sector

Expenditure on goods and services of all levels of government combined rose by 7 per cent from 1961 to 1962, with divergent movements concealed in the total figures. Purchases by provincial and municipal governments rose by over 11 per cent reflecting the increased building of vocational schools under the federal-provincial cost-sharing plan; this is in contrast to the 1 per cent increase at the federal level, where the 4 per cent expansion of defence outlays was almost offset by the fall in non-defence expenditures. Within 1962, total government purchases rose sharply from the first to the second quarter but declined gradually thereafter, reflecting the contraction in the spending by the federal government.

Total expenditures of federal, provincial, and municipal governments combined, excluding intergovernmental transfers, advanced by over 7 per cent from 1961 to 1962 with all major components of expenditure contributing to the increase.

Transfer payments to persons from all governments advanced by more than 7 per cent. At the federal level, primarily because of the rate increase in monthly payments from $55 to $65 in February 1962, the outpayments from the Old Age Security Fund rose by nearly 20 per cent; this was largely offset by a decline of more than 17 per cent in unemployment insurance benefits paid, reflecting the improved employment situation. Provincial transfers to hospitals under the Hospital Insurance and Diagnostic Services Act were higher by almost 10 per cent.

Subsidies paid by the federal government showed an increase of nearly 18 per cent, principally because of the loss incurred by the Agricultural Commodities Stabilization Board.

At the combined level, all revenue components showed increases in 1962 over the previous year, but there were offsetting changes in personal direct taxes at the federal and provincial levels of government because of the introduction of the new federal-provincial tax arrangements. All provinces levied a personal income tax in 1962; formerly the federal government had made payments to most provinces under the federal-provincial tax agreements and these payments were included in federal transfers to provincial governments. Nevertheless, federal transfer payments to provincial-municipal governments rose slightly between the two years, mainly because of considerably higher contributions to provinces under the Hospital Insurance and Diagnostic Services Act, and on behalf of vocational training. The federal transfer payments to the provinces under the former federal-provincial taxation agreements did not lapse until the second quarter of 1962 while the new direct provincial tax began in the first quarter of 1962, resulting in an overlap in the first quarter. As a consequence, federal expenditure and provincial-municipal governments' revenue were irregularly high in that quarter, thus affecting the 1962 annual totals.

Federal indirect tax revenue was up close to 10 per cent, reflecting in part the imposition of the temporary surcharges announced in June, 1962, and the rise in the value of imports between the two years. There was an increase in revenue from indirect taxes of more than 13 per cent at the provincial-municipal level, including increases in receipts from provincial sales tax of over 60 per cent (mainly because of the introduction of a sales tax in Ontario in September, 1961), from provincial gasoline taxes of over 7 per cent, and from municipal real property taxes of about 8 per cent.

Although there was a considerable rise in total expenditures of all governments combined, the increase in revenues was even larger with the consequent effect that the deficit on a national accounts basis declined significantly from $905 million in 1961 to $770 million in 1962. There was a substantial drop of more than one-third in the deficit at the provincial-municipal level but an increase of almost 5 per cent in the federal deficit. These changes, however, reflect to some extent the effects of the transition from the previous tax-sharing arrangements to the new procedure for apportioning taxes between the federal and provincial governments.

Income Flows

Labour Income

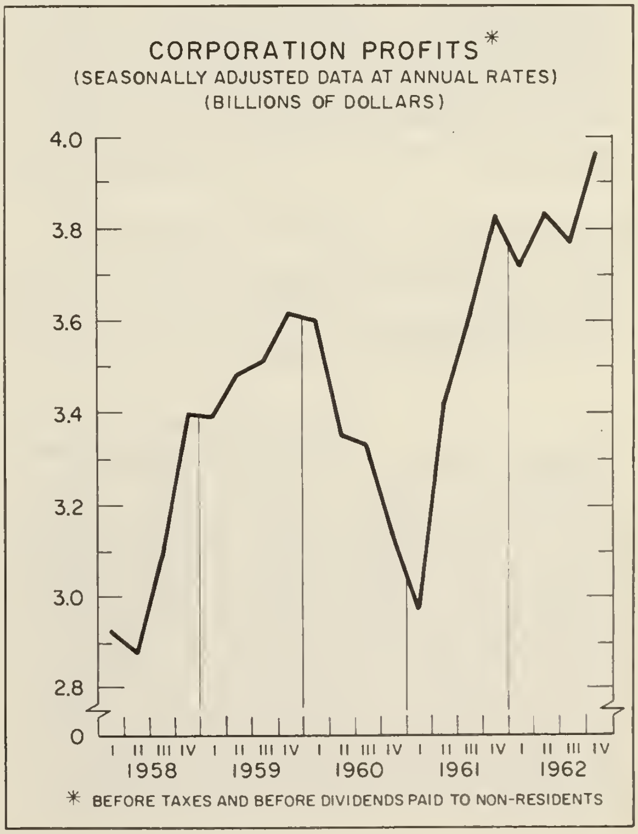
In 1962 labour income reached an estimated total of $20.4 billion, nearly 7 per cent higher than in the previous year. An increase in labour inputs as well as in labour prices contributed to the rise. Labour income rose most rapidly in the early part of the year.

As in the recent past, the largest gains in labour income among the major industries occurred in the non-government service group (close to 11 per cent). The next highest rate of change was in construction (more than 8 per cent).

In 1962 more than 42 per cent of wages and salaries originated in goods-producing industries and the remainder in service-producing industries in comparison with the beginning of the post-war period when the contribution of the two segments to the total was about equal. This changed relationship reflects the tendency in the post-war period for wages and salaries to rise more rapidly in the service-producing than in the goods-producing industries.

Investment Income

Corporation profits (before taxes and before dividends paid to non-residents) continued to remain at record levels in 1962. During the first three quarters of the year, profits tended to level off at the peak attained in 1961. but showed a gain in the



fourth quarter. This pattern of quarter-to-quarter movement differed considerably from that of 1961 when a steady rise from the trough of the first quarter took place. For the year as a whole, however, they increased by 10½ per cent to $3.8 billion. All industries showed strength except wholesale trade, and finance, insurance, and real estate. Manufacturing, particularly metal industries (including transportation equipment), mines, quarries and oil wells, and retail trade showed notable gains.

Rent, interest, and miscellaneous investment income rose by about 5 per cent in 1962. All components showed gains except net residential nonfarm rents (paid and imputed), which were estimated to have fallen as the rate of increase in gross rents slowed down while operating expenses indicated no such change. The trading profits of government business enterprises showed a substantial increase of about 9 per cent in the year.

Interest, dividends, and net rental income of persons was up about 7 per cent, mainly as a result of a rise in bond interest and in dividends received.

Accrued Net Income of Farm Operators From Farm Production

Accrued net income of farm operators reached a level of $1.4 billion in 1962, over 40 per cent higher than the estimate for 1961, and the highest level attained since the mid-fifties. Although cash receipts from the sale of farm products were at an all-time high, the largest part of the increase in accrued net income can be attributed to the greatly increased production of grains in Western Canada, resulting in a build-up of inventories on farms. The 1962 estimate of the value of crop production is $1.2 billion, about $550 million higher than the 1961 estimate.

Farm cash receipts, the largest component of farm net income, increased over 4 per cent in 1962. Major items contributing to the increase were larger participation payments by the Canadian Wheat Board and higher returns from the sale of wheat, oats, cattle and calves, poultry, and dairy products.

Farm operating expenses showed a further increase in 1962, slightly dampening the increase in gross income. Contributing to the increase were substantially higher outlays for farm rents, livestock feeds, and the operation of farm machinery, including repairs.

Accrued net income of farm operators	975	1,391	416	42.7

[1] This adjustment takes account of the undistributed profits of the Canadian Wheat Board.

Net Income of Unincorporated Business Non-Farm

In a comparison with the year 1961, net income of non-farm unincorporated business increased 4 per cent in 1962 to a level of $2.4 billion. Net income in most industry groups showed some increase with the greatest increase occurring in the retail trade, construction, community service and fishing industries. Slight declines were registered in the transportation and finance industries.

THE FOURTH QUARTER

The expansion in economic activity, which began early in 1961, continued in the fourth quarter of 1962, when Gross National Product reached a seasonally adjusted annual rate of $41,252 million, a little more than 1 per cent higher than in the previous quarter. About half of the rise in Gross National Product reflects higher prices and the remainder an advance in the volume of production. The increase in real Gross National Product was the smallest recorded since the first quarter of 1961.

An important contribution to the rise in economic activity came from the near 2 per cent increase in consumer purchases, with the emphasis falling heavily on durable goods and on motor cars in particular. International transactions had a favourable effect on domestic production and on the deficit on international current account; receipts rose significantly from an already high level and payments were appreciably lower, with virtually all the improvement in the merchandise account.

Business outlays for capital purposes were somewhat higher than in the third quarter and above the rate for the year as a whole. There was a small decline in government expenditure for goods and services, reflecting a drop at the federal level, partially offset by higher expenditures at other levels of government; the flows of income to the governments from the private sector increased moderately and the expenditures rose also but less sharply and thus combined to bring about an appreciable drop in the deficit. However, the building up of stocks, which had added a fairly important increment to the demands on current production in the third quarter, fell sharply in the fourth quarter. Thus the stimulus to higher production came largely from final demand.

The important developments on the income side of the accounts in the fourth quarter of the year were the diminishing rate of increase in labour income and a further increase in corporate profits, which were about 33 per cent higher than in their cyclical trough in the first quarter of 1961.

Production and Employment

Seasonally adjusted, real output for the fourth quarter of 1962 showed a small increase over the previous quarter. With the exception of the fourth quarter of 1961, the increase was the smallest gain since production began to expand following the 1960-61 downturn. The average increase for the first four quarters of the expansion was 2 per cent, while that for the subsequent three quarters amounted to slightly less than 1 per cent. Thus the pattern of comparatively small increases, first evident during the second quarter, persisted to the end of the year. Real output less agriculture was up slightly more than the total, with the goods-producing industries contributing just over one-half of this increase.

Within the goods-producing industries, manufacturing, with an increase of 1 per cent, constituted the major single expansionary force, accounting for almost all the increase in total goods production. The durable industry component of manufacturing, reflecting substantial increases in the output of transportation equipment and electrical apparatus and supplies, contributed most of this advance. In addition, there were marginal advances in mining and construction and a 2 per cent increase in forestry.

Among the service-producing industries, the largest gain (2 per cent) occurred in retail trade, which accounted for almost one-half of the total increase in service output. Wholesale trade showed only a fractional decline. The transportation, communication and storage group showed a 1 per cent increase in output in the fourth quarter in spite of a small decline in the transportation industries. Finance, insurance and real estate and the group of industries consisting of community, recreation, business and personal service continued to advance, showing gains of 1 per cent each, while public administration and defence declined by 2 per cent, and electric power and gas utilities by about 1 per cent.

The fractional gain in production between the third and fourth quarters of the year was accompanied by a virtually unchanged level of employment in total. However, non-farm employment was up nearly 1 per cent. At 6.0 per cent of the labour force, the seasonally adjusted rate of unemployment was fractionally lower than in the preceding quarter.

COMPONENTS OF EXPENDITURE

Personal expenditure increased nearly 2 per cent in the fourth quarter, in contrast to the stability evident in the two previous quarters.

The principal source of strength was the 9½ per cent increase in durable goods. Net purchases of new and used cars, recovering from the dip registered in the previous quarter, rose 16½ per cent. Expenditures on appliances and radios also increased sharply, by 9 per cent, while outlays for other durables showed lesser increases. Expenditures for both non-durable goods and services rose by 1 per cent.

There was little change in the rate at which outlays on fixed capital formation were being made in the final quarter of 1962. An increase of one-half of 1 per cent from the third quarter raised the annual rate to $7.1 billion, after adjustment for seasonal influences. This figure was just over 1 per cent higher than the expenditure for the year as a whole, and about 3 per cent below the anticipated expenditure for the year 1963.

Stability in the fourth quarter reflected a levelling off in purchases of machinery and equipment, which had risen sharply in the earlier part of the year, and an increase in non-residential construction partially offset by a lower level of spending on housing.

Outlays on new residential construction declined by 1½ per cent in the fourth quarter, to a seasonally adjusted annual rate of $1,592 million. The annual rate at which new dwelling units were being started fell by over 3 per cent to 126,100 units, while the rate of completions rose by 4½ per cent to 132,000 units.

Non-residential construction rose by 2½ per cent in the fourth quarter to an annual rate of $2.7 billion, mainly as a result of increased outlays on buildings and structures, a rate which was below the level for the year as a whole.

Outlays on new machinery and equipment, after substantial increases in the first three quarters of the year, levelled off at a seasonally adjusted annual rate of $2.8 billion. This stability is consistent with the overall figures of imports of goods which recorded a decline in the final quarter of the year. Estimates of imports of machinery are tentative for the fourth quarter since no commodity detail was available at the time the estimates were prepared.

The changes taking place in both imports and exports during the quarter had a favourable effect on Canadian production. The annual rate of exports of merchandise and services combined increased by over 2 per cent, after allowances for seasonal variation, to reach a total of $8.4 billion, while imports fell by over 3 per cent, to $8.8 billion. The net effect of these changes was to reduce the deficit on current international account to just over $400 million, the smallest deficit since 1955, when seasonal factors are taken into account.

This reduction in the deficit reflected an improvement in the balance on merchandise trade. With a slackening in merchandise imports and a resumption in the rise in exports, the surplus on merchandise account rose to an annual rate of $404 million, after allowances for seasonal factors.

Merchandise exports rose by just over 2 per cent to an annual rate of $6.5 billion. This gain was attributable largely to increased sales abroad of Canadian agricultural and animal production. Increases in the quarter were general, with the exception of a sharp decline in exports of non-ferrous minerals; aluminum, nickel, and copper all appeared to experience some decline in the fourth quarter. The contribution by individual commodities to the 5 per cent decline in merchandise imports, to an annual rate of $6.1 billion cannot be assessed due to the lack of detailed information. It is not possible to assess the impact of this decline on individual commodities as this information is not yet available.

The deficit balance on non-merchandise transactions showed little change, declining to $808 million, seasonally adjusted at annual rates, from $848 million in the third quarter. This, however, represents a sizeable reduction from the deficit in the first half of the year. The improvement resulted from the fact that payments for services remained unchanged, at an annual rate of $2,720 million, after seasonal adjustment, while receipts rose 2 per cent to $1,912 million.

The stability in payments concealed a fairly sharp reduction in Canadian travel expenditures abroad which was offset by an increase in the outflow of interest and dividend payments. The increases in receipts were not large for any particular service but were fairly widespread.

Seasonally adjusted at annual rates, there was a decline of about 6 per cent in the deficit for all levels of government between the third and fourth quarters of 1962. This drop reflected a reduction of about 5 per cent at the federal level and a somewhat larger reduction at the provincial-municipal level. Federal revenues advanced by 3½ per cent while expenditures increased at a slightly lower rate. Likewise, at the provincial-municipal level, revenue rose somewhat more than expenditure.

Little change occurred in the components of revenue and expenditure between the third and the fourth quarters. Although federal revenue from indirect taxes was unchanged, there was a decline of more than 11 per cent in receipts from customs import duties which was offset by increases in other sources of indirect taxes. A decrease of 3 per cent in federal expenditure on goods and services more than offset a small increase at the provincial-municipal level. There was a small advance in transfer payments to persons; a small increase in federal outlays reflected a substantial rise in unemployment insurance benefits, while at the provincial-municipal level there were larger transfers to hospitals and greater relief payments.

The increase of more than 75 per cent in subsidies between the third and fourth quarters of 1962 took place at the federal level, reflecting mainly substantial interim payments to railway companies.

Income Flows

Labour income in the fourth quarter of 1962 was at a seasonally adjusted annual rate of $20.7 billion, slightly more than 1 per cent higher than in the preceding quarter. The rate of increase in labour income tended to decline during the course of the year. Most of the third to fourth quarter movement is probably attributable to higher labour prices. As in the past quarter, the rate of increase in labour income was higher in the service-producing industries than in the goods-producing industries.

Corporation profits in the fourth quarter of 1962 rose by about 5 per cent to a seasonally adjusted annual rate of $4.0 billion or about 33 per cent over the cyclical trough in the first quarter of 1961. Manufacturing, mines, quarries and oil wells, wholesale and retail trade largely contributed to the increase in the fourth quarter. Within manufacturing, however, there were some offsetting movements; higher profits were realized in metal industries (including transportation equipment), electrical products, non-metallic mineral products, petroleum and coal products, and lower profits in wood and paper industries.

In the fourth quarter, rent, interest and miscellaneous investment income increased by close to 8 per cent to an annual rate of $2.9 billion on a seasonally adjusted basis. This increase was largely attributable to a rise in the trading profits of government business enterprises, a major part of which was accounted for by an interim subsidy paid to the Canadian National Railway.

INDUSTRIAL PRODUCTION (More detail in Table 11)

The index of industrial production was higher by 0.7% in February. With little change in either manufacturing or electric power and gas utilities, the gain was largely due to a more than 3% gain in mining output.

	total industrial production	manufacturing production			mining production	electricity and gas	total iron and steel

EMPLOYMENT, SELECTED INDUSTRIES (More detail in Table 17)

Employment in manufacturing remained about unchanged in February with fractional offsetting movements recorded in its two major components, durables and non-durables. Construction, mining and transport recorded decreases.

		manufacturing							
		total	non-durable	durable	trade	service	transport	construction	mining
					1949 = 100

RETAIL TRADE, MOTOR VEHICLE SALES (More detail in Tables 48 and 76)

Retail trade dropped further in February due primarily to declines in women's clothing stores, shoe stores and furniture and radio stores partly offset by rises in fuel dealers, drugs and variety stores.

Total sales of new motor vehicles, except the American passenger type, decreased in the same month.

		retail trade total	retail trade (ex. motor vehicle dealers)	motor vehicle dealers	department stores	new motor vehicle sales total	American type passenger	European type passenger	total commercial

---

[1] Starting in January 1962, the data are not entirely comparable with earlier years because more centers are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

MANUFACTURING INVENTORIES, SHIPMENTS, ORDERS (More detail in Tables 36 and 37)[1]

Manufacturing shipments and new orders rose again in December while inventories and unfilled orders remained virtually unchanged. New orders in machinery and construction goods were up while shipments of primary iron and steel fell irregularly.

		all industries				new orders construction goods	shipments primary iron and steel	ratio of inventories to shipments
		owned inventories	shipments	new orders	unfilled orders	new orders machinery

[1] Gross National Product at market prices excluding accrued net income of farm operators from farm production. [2] Before dividends paid to non-residents.
[3] Original data as in column 8, Table 80. [4] Data for total housing starts and completions are not affected by the area changes mentioned in footnote 1, page S-5.

PRICES (More detail in Tables 29, 30, 31, 82, 83 and 100)

The general wholesale index declined a little in March but rose from last year's March index.

The consumer price index remained unchanged between February and March with declines in the food index offsetting increases in the housing and clothing indexes.

The index of thirty industrial materials edged upwards in March.

		wholesale general index	thirty industrial materials	export prices	import prices	industrial common stocks	consumer price index (1949=100)

[1] Prior to the census in 1961, population estimates were made quarterly on March 1, June 1, September 1 and December 1, and in addition on July 1 and January 1 of each year. After the 1961 census the quarterly estimates will be made on January 1, April 1, July 1 and October 1, as well as June 1. **Source: Estimated population of Canada by provinces at June 1, 1962 (91-201) D.B.S.**

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the seires. [2] Includes residual error of estimate. Source at bottom of Table 10.

Table 7: gross national expenditure in current dollars

years and quarters	personal expenditure on consumer goods and services	government expenditure on goods and services	business gross fixed capital formation			value of physical change in inventories	exports of goods and services	deduct: imports of goods and services	residual error of estimate	gross national expenditure at market prices
			new construction		new machinery and equipment

[1] The data in Tables 17 to 27 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and domestic service. [3] Includes storage and communication. [4] Includes insurance and real estate. [5] Excludes public administration and defence and such community services as health and education. **Source: Employment and Payrolls, (72-002), D.B.S.**

[1] See footnote 1, Table 17. [2] See footnote 2, Table 17. [3] Employment indexes in manufacturing and in its durable and non-durable components are given in Table 17. [4] In addition to those listed, tobacco products, leather, printing and publishing and miscellaneous industries are included in non-durable manufacturing.

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Industry values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] End of period. [5] Classified according to the Standard Industrial Classification. **Source: Inventories, Shipments and Orders In Manufacturing Industries (31-001), D.B.S.**

[1] Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Excluding shipments for re-processing at maker's own plants. [3] Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings. **Source: Primary Iron and Steel (41-001), D.B.S.**

[1] These totals include all generating agencies producing over ten million kilowatt hours per year. [2] These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. [3] Less imports. [4] Total net generation less net exports. [5] Mainly the amount used in electric boilers. **Source: Electric Power Statistics, (57-001), D.B.S.**

[1] Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. [2] The data on building permits are collected for 1, 100 municipalities and individual figures are available on request. Some of the annual totals for 1960 and 1961 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. **Source: Building Permits (64-001), D.B.S.**

[1] The coverage was extended to 507 municipalities in 1948, and as of 1961, stands at 1,100, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D.B.S.**

[1] Footnote and Source are at Bottom of Table 63. [2] Starting in January 1962, the data are not entirely comparable with earlier years because more centres are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

Table 66: building materials

monthly averages or months		asphalt products						iron and steel products			clay products	
	rigid insulating board	shingles	smooth-surfaced rolls	mineral-surfaced rolls	felts and sheathings	sawn lumber		cast iron soil pipe and fittings	steel pipes, tubes, fittings	wire nails	building brick	structural tile[3]

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. [2] Planks and boards, flooring and square timber. [3] Hollow blocks including fireproofing and load-bearing tile. [4] For building insulation only [5] Figures cover the production of firms which normally account for 90 per cent of the total for Canada. [6] Includes concrete chimney blocks, up to December 1959. [7] Factory sales of firms which normally account for 96% of total Canadian production. **Source: Concrete Products (44-002), Products made from Canadian clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board (36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Sales of Paints, Varnishes and Lacquers (46-001) and Trade of Canada, Imports (65-007), Exports (65-004), D.B.S.**

*See also Tables 30 and 31. [1] Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1961 are final prices. From August 1, 1961 to July 31, 1962, the western grain prices used in the index are final prices for oats and barley and initial prices for wheat. [2] Includes subsidy on hogs. [3] Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef. [4] Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. **Source: Coarse Grains Quarterly (22-001), Stocks of Meat and Lard (32-012), Index Numbers of Farm Prices of Agricultural Products (62-004), Livestock and Meat Trade Report, Dept. of Agriculture, D.B.S.**

[1] Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. [2] Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. [3] Annual data are monthly averages of crop year. [4] Includes eggs for hatching.

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted. [2] Includes stocks held by manufacturers, wholesalers and other warehouses. [3] The increase in percentage of capacity from October to November, 1960 reflects the fact that some mills worked more than the 25 days included in this formula as well as a reduction in total daily capacity from 171,000 hundredweight in October to 151,000 hundredweight in November. **Source: Grain Milling Statistics (32-003), Margarine Statistics (32-005), Quarterly Report on Processed Foods (32-007), D.B.S.**

---

[1] Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. [2] Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade. **Source: Retail Trade (63-005), D.B.S.**

[1] Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial institutions for which comparable data are not available. [2] Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. [3] Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. [4] Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. Instalment credit includes conditional sales agreements only. [5] Amount owing to oil companies, excluding commercial accounts. [6] Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. [7] Figures for dates other than year ends are estimated on the basis of the loans by twelve companies. **Source: Department of Finance, Department of Agriculture, Bank of Canada, Credit Statistics (61-004), D.B.S.**

[1] Data in this table refer to railways with annual operating revenues of $500,000 or over. Monthly averages for 1960 and 1961 differ from the sum of the monthly data due to revisions which cannot be allocated by months. [2] Includes January to July interim payments related to recommendations of the Royal Commission on Railway Transportation. **Source: Railway Operating Statistics (52-003) monthly, (52-206) annual, D.B.S.**

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and undivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [6] Excluding Canadian day to day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of Canada Savings bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. [10] Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

[1] Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks. [2] Subsidiary coin issued by the Mint less cain held by Bank of Canada and chartered banks in Canada. [3] Less total float, i.e. cheques and other items in transit (net). [4] At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about $140 million, were reclassified from "personal savings deposits" to "other natice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date. **Source: Statistical Summary of Bank of Canada.**

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales. [1]The Canada totals by months for 1960 and 1961 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1960 and 1961 nor the monthly averages for 1961 have been revised to agree with the Canada total. **Source: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.**

Note.—The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (Excluding government-owned companies and incorporated co-operatives). [1] Includes Tobacco, Leather and Miscellaneous Manufacturing Industries. [2] Includes Electric Power, Gas and Water Utilities. [3] Includes Community, Business and Personal Service Industries. [4] Includes Agriculture, Forestry, Fishing and Construction. **Source: Corporation Profits (61-003), D.B.S.**

A NOTE TO USERS

Changes in this issue:

(1) The unadjusted data on Industrial Production in Table 11 and the seasonally adjusted data in the same table and on page S-1 have been revised from January 1962 onwards.

(2) The seasonally adjusted data on Labour Force appearing on page S-2 have been revised back to January 1960.

(3) The unadjusted data on Retail Trade in Table 76 are revised starting January 1961 with the seasonally adjusted figures in the same table and on page S-4 revised back to January 1959.

(4) The unadjusted data on Exports and Imports appearing in Table 84 have been revised for 1961 and 1962 respectively. The seasonally adjusted figures for Exports and Imports in Table 84 and page S-7 have been revised back to January 1959. The revision to export series incorporates also a wheat adjustment which will be more timely than previously.

(5) The series "Farm Cash Income" unadjusted for seasonality in Table 67 and seasonally adjusted on page S-9 have been effected by revisions from the first quarter 1960 onwards.

(6) The series on "Calf and Kip Skins Wettings" have been dropped from Table 41 and will no longer be carried.

Annual Supplement:

The second volume of the Annual Supplement will appear shortly and will supersede Volume I distributed last year. It will contain the historical record and the latest revised figures adjusted and not adjusted for seasonality of all the series appearing in the "S" section of the monthly Review.

As formerly, it can be kept up-dated by referring to the current issues of the Review. The foreword in the Supplement will describe in more detail how it is to be used and its relationships to previous Supplements to the Review.

Annual Subscription: $5.00 — Single copies: 50c. each

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information Services Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

AN ANALYSIS OF INDUSTRY REAL OUTPUT TRENDS AND CYCLICAL BEHAVIOUR

PART I

Introduction

The current interest in economic growth and its causes focuses attention on the relative scarcity of comprehensive and integrated statistics relating to the Canadian economy which could serve as the raw materials for detailed growth studies. Many writers recognize that it is not sufficient to measure changes in aggregate production alone in order to evaluate economic progress. They stress the necessity of exposing the underlying forces, the inter-action of which results in the basic strength of the economic system at any one time. Thus it is essential, among other things, to determine which industries of the economy tend to contribute most to its growth and which are likely to exert a restraining influence; those industries which are cyclically sensitive and those that expand steadily in response to population growth and so forth.

In a reference paper entitled *Indexes of Real Domestic Product by Industry of Origin, 1935-61*[1], the Dominion Bureau of Statistics is, for the first time, making available historical volume of production data for individual goods and service-producing industries outside of the industry areas traditionally covered by the Index of Industrial Production.[2] Thus industry production index coverage has been extended from mining, manufacturing and electric power and gas utilities, for which volume indexes have been published since the 1920's, to encompass all other major industrial divisions, i.e., agriculture, forestry, fishing and trapping, construction, transportation, storage and communication, retail and wholesale trade, finance, insurance and real estate, public administration and defence, and community, recreation, business and personal service. In addition, considerable component industry detail is published. The indexes provide annual data from 1935 to date as well as quarterly data commencing with 1946. The report therefore provides historical background for studies of industrial growth and development in Canada for the past 27 years as well as cyclical background for more current analyses.

Part II of the reference paper contains an analysis of real Domestic Product consisting of two sections. The first section, which follows below, deals with long-term trends and industry growth rates as reflected in the annual indexes from 1935-1961. The second section, which will appear in the next issue of this publication, deals with short-term changes during the period following World War II, as indicated by the quarterly data available from 1946. The analysis is intended merely as a broad illustration of two of the uses to which the industry real output data can be put. Although not necessarily the most important, growth and cycle analyses are perhaps among the uses which are of widest interest.

Before proceeding with the analysis, however, it might be useful to examine briefly the concept which was employed in constructing the industry real output indexes. The conceptual framework and the methods used are discussed in detail in the reference paper, the main body of which is devoted to elucidating the system and pointing out the problems and pitfalls involved. The technical appendices describe and set forth the actual methods used, as well as the techniques and problems of reconciling the real output data with the constant dollar expenditure on national product (deflated Gross National Expenditure) data. The reader is therefore referred to the report itself for a detailed discussion of concepts, methods, problems and other relevant matters.

Briefly, Gross Domestic Product (G.D.P.) at factor cost by industry of origin, which is the concept that the real output indexes attempt to measure, represents the unduplicated output, expressed in quantity terms, of individual industries located in Canada. Industry output indexes are aggregated by using as weights their base year contributions to Gross Domestic Product at factor cost, i.e., the sum of wages, salaries and supplementary labour income, corporation profits, net income of unincorporated business, other investment income and capital consumption allowances. As previously mentioned, the real output industry indexes can be regarded as representing an extension of the Index of Industrial Production to encompass the remainder of the economy. However, they can also be regarded as an extension of the national accounting framework, i.e., as an elaboration of the supply side of the National Accounts. The real output study presents an industrial distribution of G.D.P. in quantity or base year dollar terms. The data are expressed in index number form (1949 = 100) for greater ease in manipulation and making comparisons. Thus the real output indexes combine to constitute a most suitable vehicle for making comparisons of changes in the growth of industries. They represent a valuation of quantities produced in a given period with the prices of a base year and thus they eliminate the distortions found in current value data due to price change. The output indexes therefore measure "real" changes over time. They provide a general framework and a yardstick against which the performance of individual industries can be measured.

[2] *Revised Index of Industrial Production, 1935-1957*, Catalogue No. 61-502, Queen's Printer, Ottawa, $1.50. For current monthly information see *Index of Industrial Production*, Catalogue No. 61-005, Queen's Printer, Ottawa, $2.00.

In a changing world economy and at a time when structural changes appear to be occurring within the domestic economy itself, such as the shifts in the labour force away from agriculture and into the service industries, measures of industry real output would seem to be particularly useful. Their usefulness, however, is greatly enhanced when they are used in conjunction with carefully selected and related data.

Long Term Trends and Industry Growth Rates

Over the course of the past three decades the world has undergone profound economic changes. One need only recall some of the most dramatic and far-reaching of these: the depression of the thirties and the subsequent slow recovery; the unprecedented upheaval of the Second World War; the emergence of new national and international spheres of influence in the post-war era — both on the political and economic fronts; the ever-present social flux with its attendant changes in the mode of living; and the striking advances in the fields of science and technology — two forces which are themselves among the greatest contributors to change.

Canada has not escaped these influences. Insofar as it has an open economy, sensitive to changes in world economic climate and affected in many ways by the powerful and technologically advanced economy of the United States, Canada may be said to be particularly susceptible to them. It is against this background that Canadian economic development during the twenty-seven year period from 1935-61 should be viewed.

During this period real domestic product more than tripled, growing at an average annual compound rate of 4.5 per cent. This growth in production was the result of the combined pressures brought to bear upon the various goods-and service-producing industries within the economy by the interrelated changes in demand (both domestic and foreign), technology, capital formation, marketing techniques and the labour force.

The domestic market had expanded considerably during this period, especially in the fifties when immigration and net family formation reached a postwar peak. The population of Canada increased from 10,845,000 in 1935, through 13,712,000 in 1950, to 18,238,000 in 1961, at an average annual rate of 2.1 per cent.

CHART-1

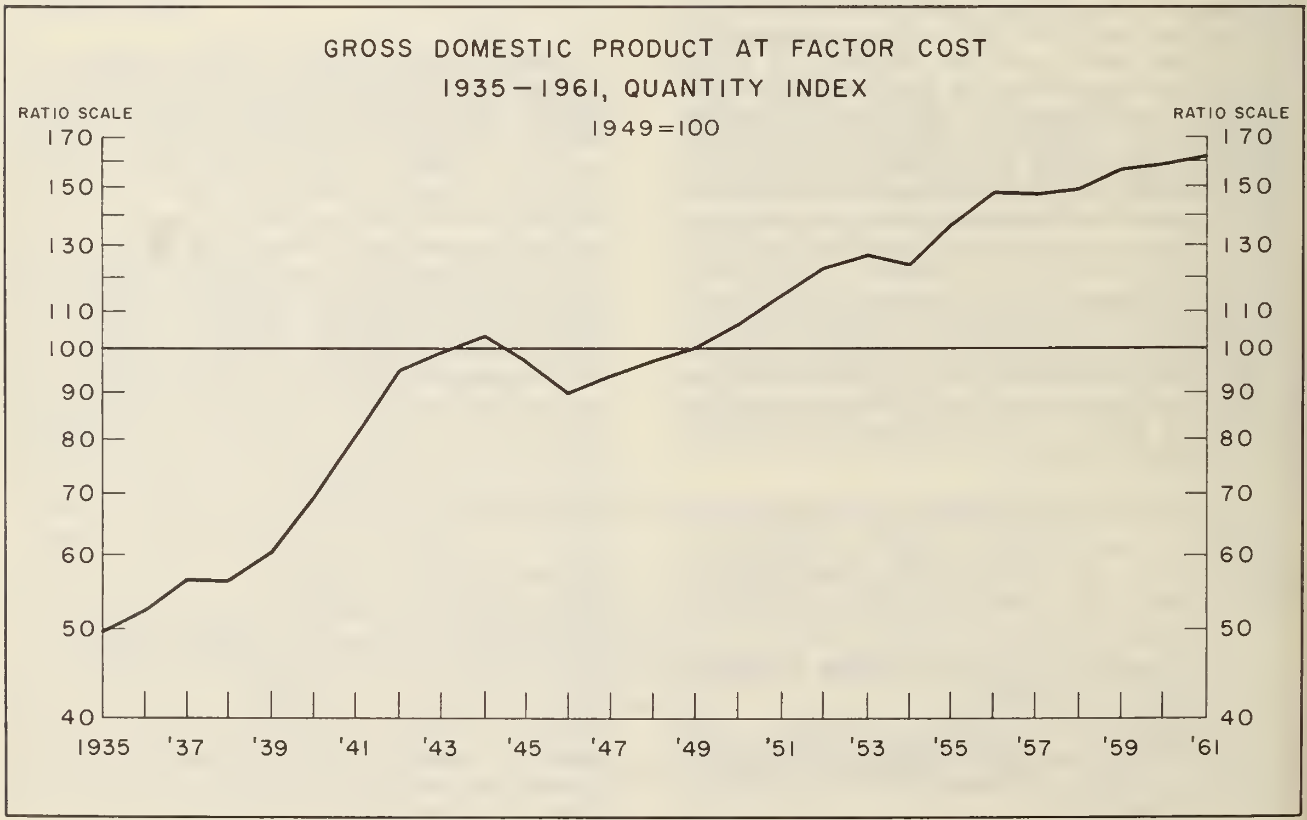

CHART-2

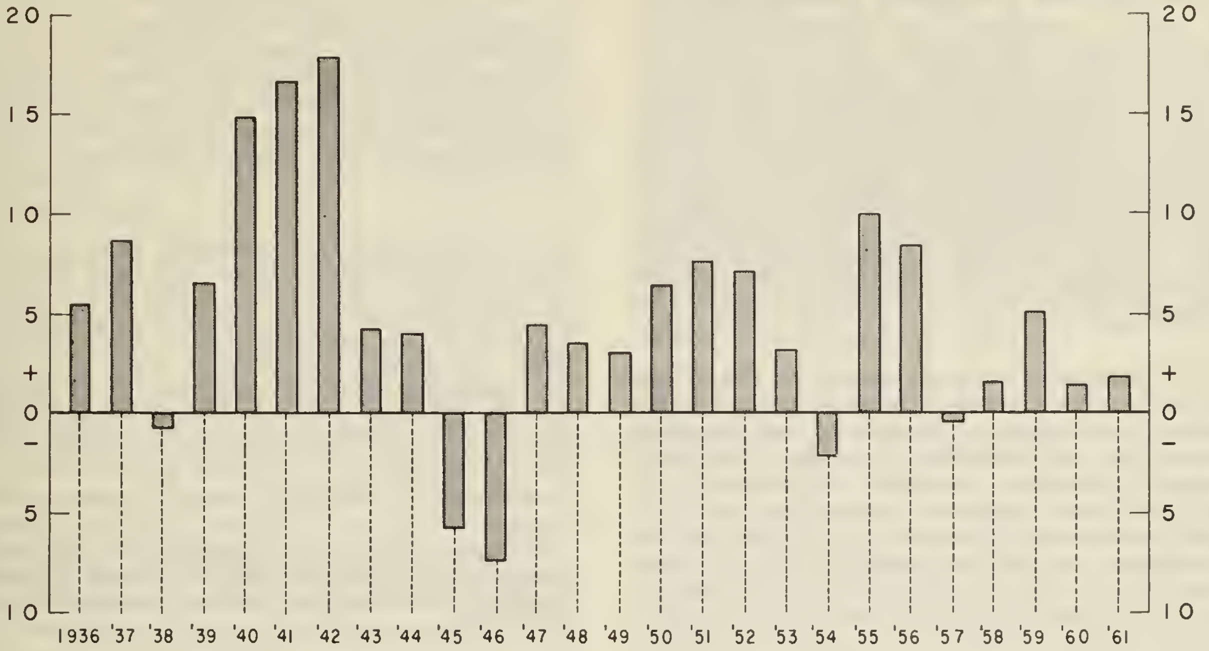
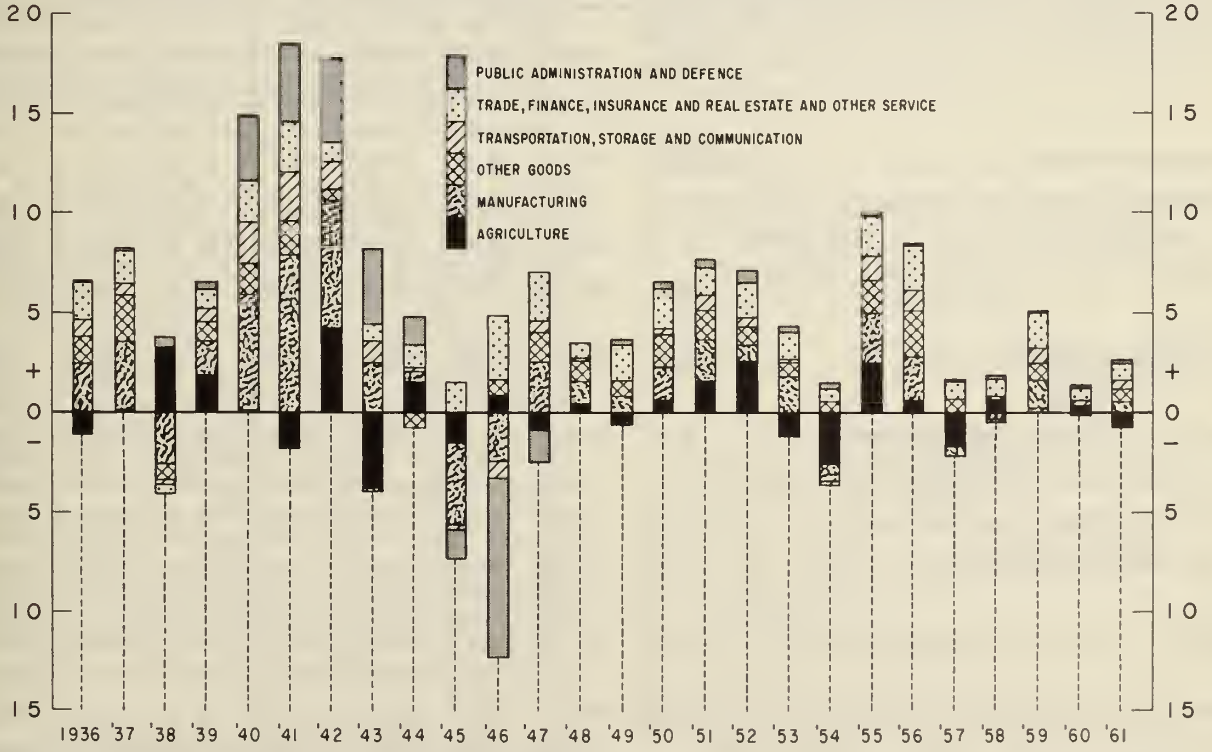
PERCENTAGE CHANGE (YEAR-OVER-YEAR) IN REAL GROSS DOMESTIC PRODUCT AT FACTOR COST, 1936-1961



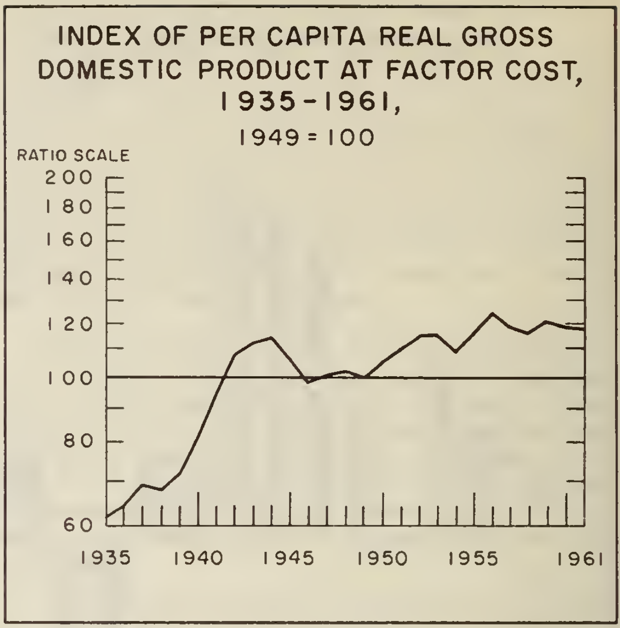
CONTRIBUTIONS TO THE PERCENTAGE CHANGE, BY SIX MAJOR INDUSTRY GROUPS, 1936-1961



The tremendous expansion in productive activity following the outbreak of World War II, when output almost doubled within a period of five years, was facilitated by the existence of a large unused labour pool at the outset of hostilities. During the war years a large proportion of resources was diverted to the war effort, resulting in the expansion of many defence-oriented industries. At the same time shortages of consumer and investment goods were created in other areas while income and savings were rising. During the immediate post-war period a certain amount of industrial dislocation occurred as a result of re-tooling and a large-scale changeover to peacetime production, coupled with major labour unrest in some industries. This phase of readjustment, however, did not generally extend beyond 1946, following which production resumed its upward trend.

The post-war period was marked by three major expansions. The first was based on satisfying the backlog of war-deferred investment and consumer demand and on supplying the needs of the war-devastated countries, especially for various materials. The second was based on the requirements of defence-supporting industries following the outbreak of the Korean war, and on stock-piling requirements at home and abroad. The third was the investment boom of the mid-fifties during which output reached

CHART-3



INDEX OF PER CAPITA REAL GROSS DOMESTIC PRODUCT AT FACTOR COST, 1935-1961, 1949 = 100

Note: The average annual rate of growth of per capita output, computed using the least squares of logarithms method, was 2.3 per cent for the period 1935-61.

[1] Analytical tables, *National Accounts, Income and Expenditure, 1926-1956 and 1961*. (As of 1955 the electricity and gas components of personal expenditure have been reclassified from services to non-durable goods).

a new high level. These strong demand influences combined to make most of the period one of fairly rapid and sustained growth. Production data reveal, however, a diminishing rate of increase during the late fifties, as external sources of supply for many commodities multiplied and as the competition encountered by Canadian producers intensified. At the same time there was an absence of strong stimulants to domestic demand such as the deferred demand and population growth of the preceding periods. During the latter part of 1961, however, there were indications of re-emerging strength both in production and in demand.

Along with the increases in total final demand there were also shifts in the composition of demand which, as noted in the following paragraphs, affected the output of the various industries. Imports retained roughly the same relative share of G.N.P. while exports, as a percentage of total expenditure on Gross National Product, declined from 26.4 per cent in 1935 to 20.6 per cent in 1961.[3] This would appear to be an indication of the growing importance of the domestic market as an outlet for the products of Canadian industry. During this period government expenditure and business gross fixed capital formation made considerable relative gains. At the same time, personal expenditure on goods and services, as a percentage of total expenditure, declined from 77.4 per cent in 1935 to 65.8 per cent in 1961.

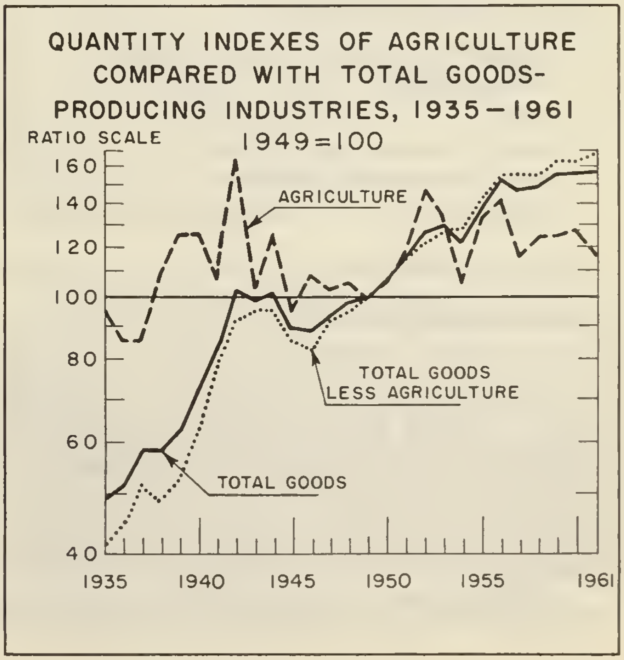
As can be seen from the preceding table, personal expenditure on durable goods increased relatively while that on non-durable goods declined. This is understandable in view of the fact that in 1935 the Canadian economy had not as yet recovered from the depression, while the 1956-61 period was one of high-level production. In periods of severe contraction, expenditures on the necessities of life seem to take priority over postponable expenditures.

An examination, at a detailed level, of the trends in demand-supply relationships would be of interest, but it is difficult to establish a causal relationship between the output of an industry and the expenditure on its products. However, it might be possible to arrive at a rough estimation of the effects on production trends of broad changes in demand. Thus, the relative gains in expenditure on new construction, as shown in the preceding table, indicate increased construction activity, while the growing share of expenditure on new machinery and equipment and consumer durables suggests expansion in some areas of manufacturing and the extractive industries. For example, an increased demand for automobiles, in addition to expanding the production of the motor vehicle industry, would indirectly create new demand for the raw materials used in their production. This in turn would stimulate production in the extractive industries if imports of these materials did not increase to the same extent. This appears to have been the experience of Canadian extractive industries during the post-war period. Further knowledge concerning these conclusions can be obtained by tracing the development of the various industries during the period under consideration.

An inspection of the rates of growth of the industries and industry groups reveals that the highest rates occurred in the electric power and gas utilities, the mining, the construction and the manufacturing industries, with trade and transportation, storage and communication expanding at about the same rate as total manufacturing. No industry group showed an actual decline over the period as a whole. Agriculture had the lowest rate of growth — less than 1 per cent. However, it is essential to examine the pattern of development in more detail.

Most notable was the absence of strong expansionary forces in agricultural production. As in most other industries, output in agriculture expanded during the early war years and again during the period from 1949 to 1952. In neither case, however, did the upward trends continue. Grain surpluses existed during most of the post-war period. At the same time, the substantial movement of labour away from agriculture continued. Chart 4, a comparison of agriculture and total goods-producing industries, shows how the former, especially during the 1950's, exercised a dampening influence on the aggregate index. This relative stability appears to be more pronounced in the output of vegetable products than in the output of animal products. The latter showed smaller year-to-year fluctuations over the entire period, and a more rapid growth during the fifties than the former, with the average annual rate of growth for the 1935-61 period as a whole very nearly

CHART – 4



QUANTITY INDEXES OF AGRICULTURE COMPARED WITH TOTAL GOODS-PRODUCING INDUSTRIES, 1935 – 1961

1949 = 100

---

[3] As indicated in *National Accounts, Income and Expenditure, 1926-1956 and 1961,* the ratio has been declining consistently since 1926 (except for the World War II period).

the same for both components (approximately 1.8 per cent).[4]

Forestry,[5] like agriculture, showed wide year-to-year fluctuations. Production in this industry however, was to a far greater extent geared to demand and price changes. The effects of these factors on forestry output can be traced on Chart 6. Production increased following the outbreak of World War II as a result of an increased demand for the materials provided by this industry, levelled off during 1941, but began to expand once more in 1943, more slowly at first, but from 1946 to 1948 at a more rapid rate. Production declined during 1948-49, but rose again during 1950 and 1951 to a post-war peak of 141.5 which was not surpassed until 1956 when an all-time high was reached. The high levels of output, especially of pulpwood, resulted in general over-production and inventory accumulation. These factors, followed by a drop in domestic and foreign prices during 1957, resulted in a significant decline in output, which lasted until 1959. Produc-

---

[4] It should be borne in mind that although the gross output of agriculture shows a growth rate of 1.8% per annum the industry indexes are prepared by subtracting intermediate material and service inputs wherever possible. This input deduction results in a net output rate of growth of 1 per cent. This was due to a three-fold increase in material inputs caused, for the most part, by increased farm mechanization but also by the more intensive use of fertilizers, special feeds and similar materials.

[5] See *Indexes of Real Domestic Product by Industry of Origin, 1935-61*, Appendix B, for a description of industry content.

TABLE 2. Average Growth Rates[1] in Selected Industry Divisions and Groups

(Per cent increase per year)

Commercial industries[2]	4.7	4.2
Non-commercial industries[2]	3.0	4.6

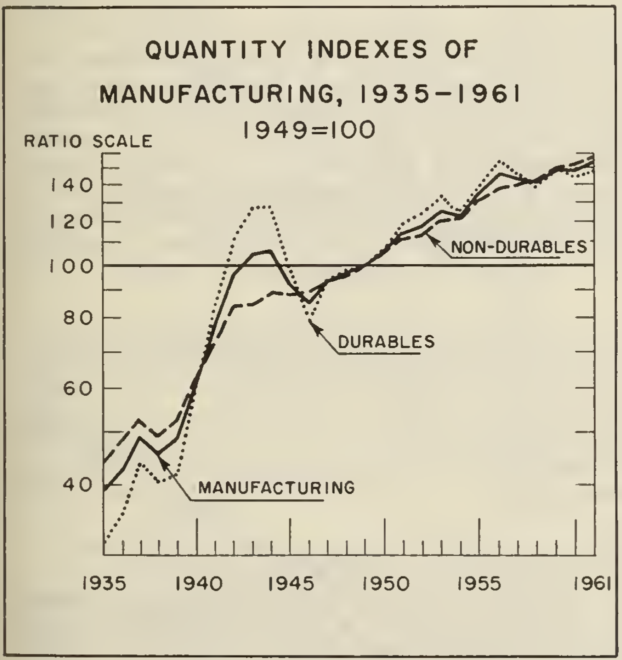
[1] The calculations were based on the least squares of logarithms method. This method takes into account movements within the period, thus yielding more meaningful measures of average growth than would result from the use of terminal years only. The growth rates were computed both for the entire 1935-61 period and for the 1946-61 period. For mining and manufacturing the computation was extended back to 1926 (using published monthly data), yielding growth rates of 5.3 and 5.1 respectively for the period from 1926-61. During the same period, G.N.E. in constant dollars grew at a rate of 4.2 per cent per annum. The growth rates referred to in the text pertain to the 1935-61 period. All other computations were made for purposes of comparison only, in order to provide a background for evaluating the trends for the 1935-61 period, which were in some cases significantly affected by wartime developments and the depression of the 1930's. The post-war period, although less affected by such irregular factors, may be too short for the establishment of representative growth rates.

[2] The non-commercial group of industries includes public administration and defence; hospitals, education and other community service, n.e.c.; and domestic service. The commercial industry group includes all other industries.

tion increased subsequently; nevertheless there cannot be said to have been an expansion in forestry output during the 1951 to 1961 period.

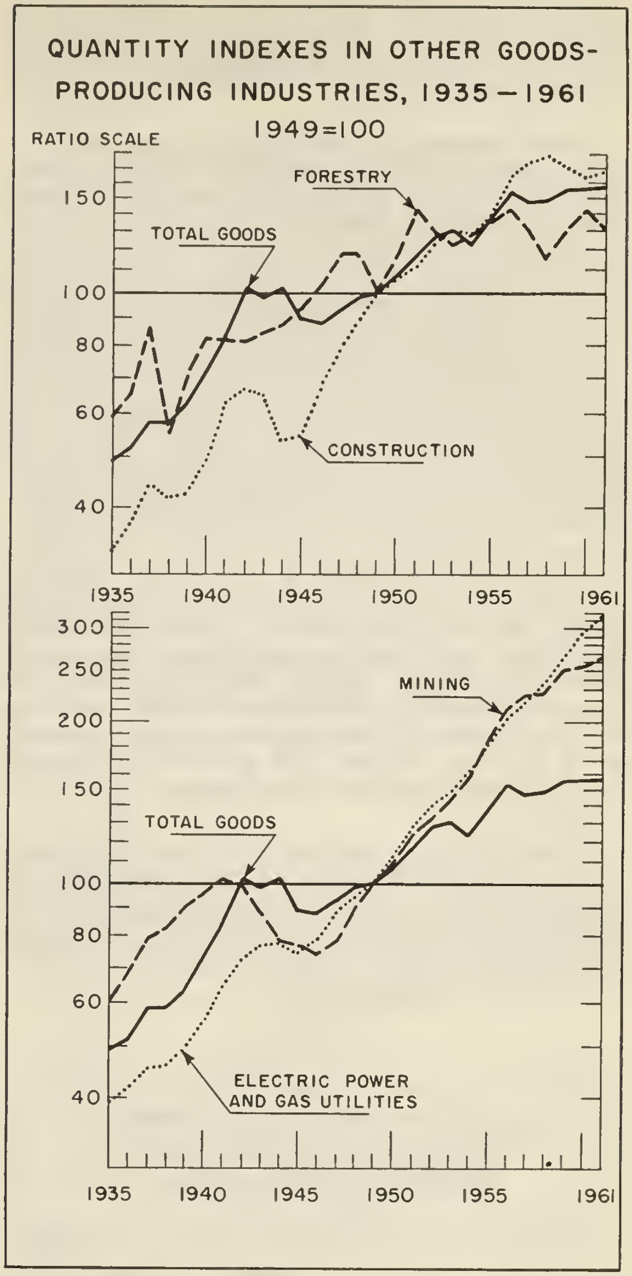
Construction follows a clear-cut pattern of growth. During the early war years there was a sharp expansion in construction activity as a result of defence requirements. Following the 1943-45 decline there was another period of rapid expansion when volume almost doubled in the course of four years in response to deferred demand. After the initial shortages had been met, construction continued to expand more slowly until defence expenditures associated with the Korean war and some of the resource developments of the early 1950's, along with residential building activity, provided additional stimuli. The investment boom of the mid-fifties, which centred mostly around the resource industries, raised construction volume to a high level. Following 1958, the levels of output in construction were lower, although expansion was resumed during 1961.

CHART-5



The electric power and gas utilities industry showed a steady increase since 1949. As noted before, the industry was remarkable for its high growth rate. This rapid expansion was the result of extensive hydro-electric projects. The construction of the natural gas pipelines during the fifties was followed by a sharp increase in the output of gas utilities.

CHART-6



Mining,[6] which reached a peak early in the war, declined subsequently until about 1946, largely as a result of reduced production of gold and other metals. In 1947 mining resumed its upward trend—from 1954 to 1956 at an accelerated rate. Substantial increases in the production of iron ore, uranium, petroleum and natural gas were, for the most part, responsible for the rapid expansion. Other minerals also showed sustained growth, with the exception of coal, the production of which declined steadily. Since 1956 mining growth has been less rapid. The

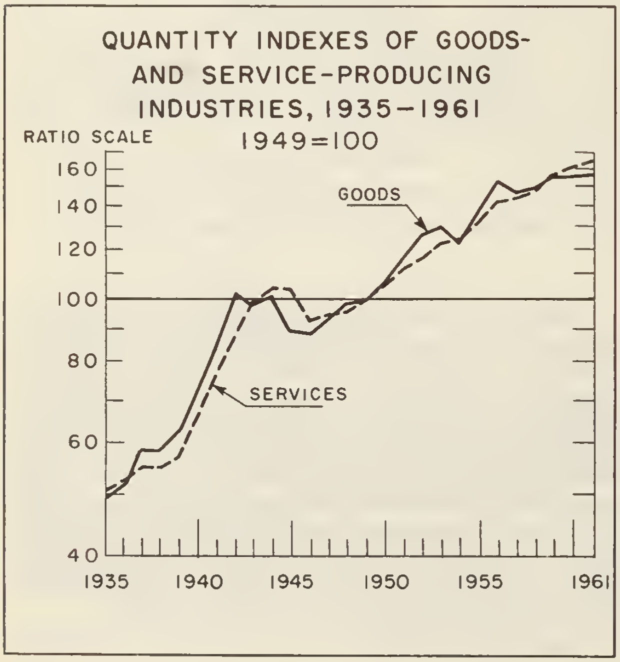
---

See footnote page 8.

growth in the output of the mining industry during most of the post-war period was at the centre of the investment developments of the 1950's, and provided some of the impetus for the expansionary forces in the rest of the economy.

Manufacturing[6] showed the highest rates of growth during the early war years, when, as indicated in Chart 5, production more than doubled between 1939 and 1943. This very high rate of growth reflected sharply expanded output of war-required products and was particularly apparent in the area of durable goods manufacturing. The wartime peak in aggregate manufacturing output, which was reached in 1944, was not surpassed until 1950, four years after manufacturing began to recover from the dislocations associated with the changeover to peacetime production. This growth occurred in response to pent-up demand both for consumer goods and for capital goods. The Korean war gave the production of durable goods a renewed stimulus. Following the armistice in 1953, defence expenditure and foreign demand began to decline and the 1954 recession saw a drop of 3 per cent in manufacturing output. At this point stimuli usually associated with longer term demand influences, such as resource investment, housing requirements and an expanding population became more evident, resulting in a rapid recovery: manufacturing output expanded by 18 per cent between 1954 and 1956. Following 1956, the growth has been more moderate.

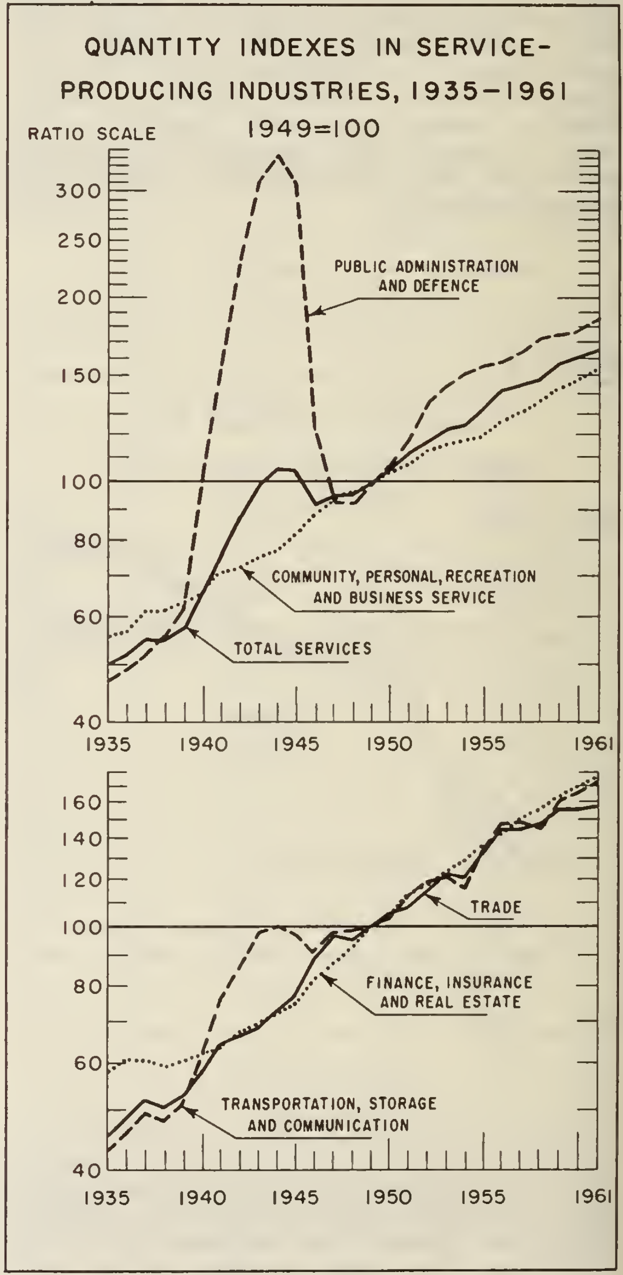
CHART-7



QUANTITY INDEXES OF GOODS- AND SERVICE-PRODUCING INDUSTRIES, 1935-1961

The difference between the two major components of manufacturing, non-durables and durables, is immediately apparent from Chart 5. Non-durables expanded more or less steadily throughout the entire period with chemicals, petroleum products and the foods and beverages component contributing much to this growth. Durable goods manufacturing, on the other hand, was sensitive to changes in investment activity and defence expenditures. In addition, consumer demand for durable goods such as motor vehicles exhibited considerable cyclical sensitivity.

CHART-8



QUANTITY INDEXES IN SERVICE-PRODUCING INDUSTRIES, 1935-1961

The demand by both government and business for the output of some of the service industries (such as financial and business) appears to have been increasing over the period. Personal expenditure on services also increased but grew less rapidly. The output of the service-producing industries kept pace with the increases in total Gross Domestic Product.[7]

---

[6] For a more detailed analysis of mining and manufacturing production during the war years, see pp. 39-54 of *Revised Index of Industrial Production, 1935-1951*, DBS Reference Paper 34. For an analysis relating to the post-war period see Part II of *Revised Index of Industrial Production, 1935-1957*, DBS Catalogue No. 61-502, Queen's Printer, Ottawa, $1.50.

The smooth trend of the service industries was interrupted during the 1940-46 period as a result of the sharp upsurge in the output of the public administration and defence component. This development was also reflected, although to a considerably lesser degree, in the transportation, storage and communication group. In 1949 public administration and defence entered another phase of growth. This was accelerated during the Korean war period. In contrast to the above, output of wholesale and retail trade grew less rapidly during the later war years with major expansionary periods confined to the early war years and the immediate post-war period when the lifting of wartime controls released pent-up demand. From about 1956 there appears to have been a decline in the rate of growth in the volume of trade, similar to that in the goods-producing industries. Unlike that of many other industries, the rate of growth of the community, personal, recreation and business service industry group has been sustained during the late fifties. This expansion is largely the result of relatively strong gains in the hospital, education and business service components.

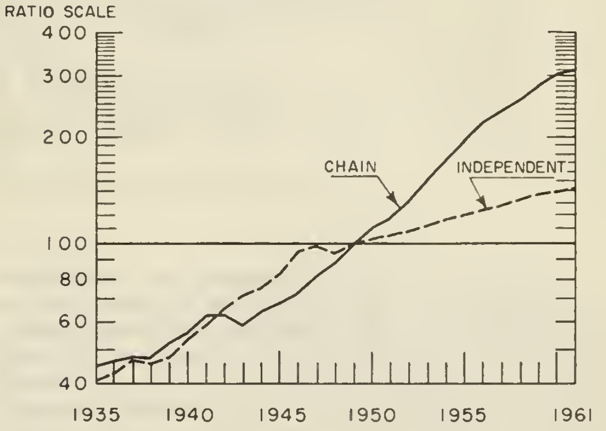
The rate of growth of the finance, insurance and real estate industries was 4.9 per cent per annum. Even after abstracting from the effects of the rent component, which expanded more rapidly during the post-war period, this group was among the faster growing industries in the economy.[8] Business services expanded at an average annual rate of about 6 per cent during the 1935-61 period. This industry includes, among others, advertising agencies, law firms, accountants, and stenographic agencies.

One of the most striking examples of the growing demand for different types of service has been the adoption and acceptance of advertising on an increasing scale. Advertising revenues provided the main revenue sources for a substantial segment of the communication media, such as the printing and publishing and the radio and television broadcasting industries. The growth of advertising may have been a reflection of increasing competition among producers who used it as a means of product differentiation and as a stimulus to demand. In any case, it affords one illustration of a shift in marketing techniques.

As industrial capacity increased, the attention of the business community turned toward the problem of distribution. The emphasis on the satisfaction of consumer demand resulted, however, in certain changes in the distributive process. The following chart serves to illustrate such a change in the field of food distribution, which has been subject to steady growth without major cyclical disruptions. As can be seen, there was a marked shift after the war from the small retail outlet to chain stores. These chain stores could command the capital to build large, attractive outlets in the growing suburban areas, and provide a greater variety of well displayed food and non-food items to the consumer.

CHART-9

GROCERY AND COMBINATION RETAIL STORES, 1935-1961, QUANTITY INDEXES, 1949=100



Even more remarkable than the demand-induced changes that were touched upon above are the striking changes brought about by the technological discoveries and innovations that have transformed whole production processes and opened up hitherto unknown areas in the fields of manufacturing, transportation and communications. As a result of these transformations, newer industries, such as air transport, have assumed major importance in a comparatively short time; entirely new industries, such as the gas pipelines, have appeared; and others have created a profusion of new products, such as the petro-chemicals of the chemicals industry and the television and other electronics products of the telecommunication equipment industry.

---

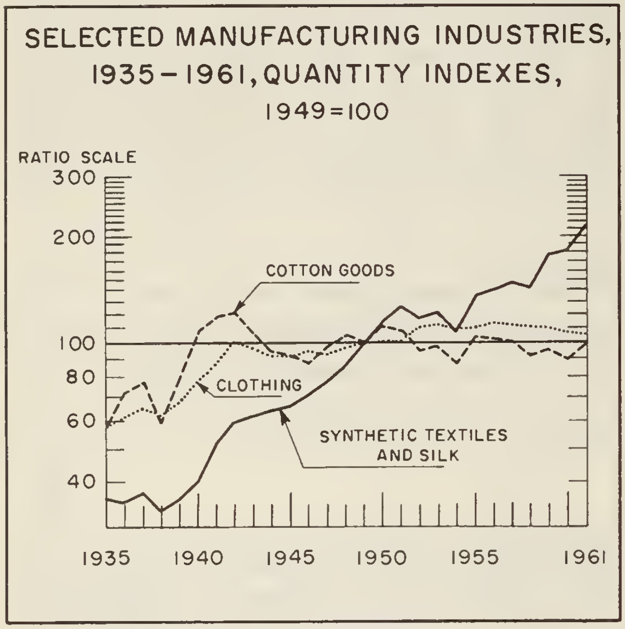
[7] In comparisons of service industry output with the G.N.E. data for services, however, caution should be exercised. In Table 1, only personal expenditure on services is shown explicitly. This aggregate does not include government expenditure on services, exported services or business expenditure on services. Any services, such as trade and transportation, which are absorbed in final goods and services are excluded. Thus, differences are to be expected between personal expenditure on services and total output of the service industries.

It should also be noted that, because of data deficiencies, service inputs are not deducted from the net output measure of the goods-producing industries. Insofar as intermediate business services rose more than net output including such services, the industry measures would have an upward bias.

[8] Since the output of these industries is generally assumed to move with the volume of labour input for purposes of this study and since they were undoubtedly affected by capital investment these rates of growth may be understated.

As was to be expected, those industries, which were in a position to benefit from the above innovations, were among the most rapidly expanding in the economy, although the impact of the expansion spread through the entire economic system, creating new demand, both for the new products and the materials used, and expanding employment opportunities. Thus technological change has acted as a major stimulant to growth. The following charts illustrate this point in the field of manufacturing.

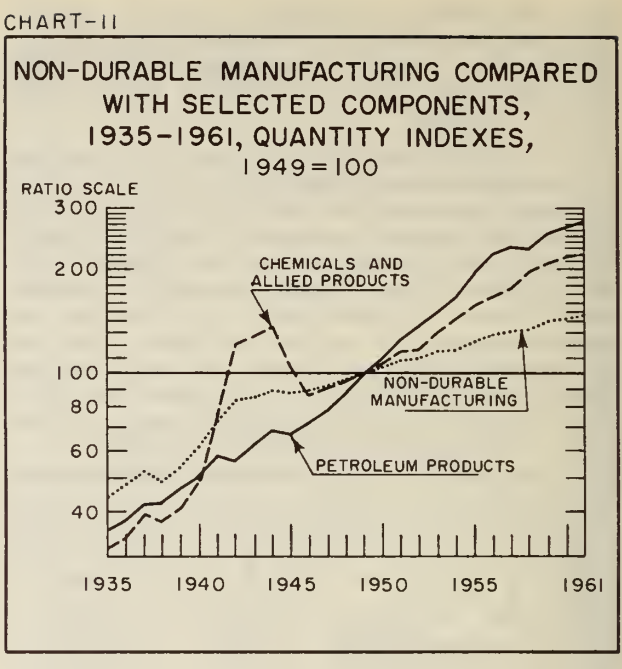
CHART-10



SELECTED MANUFACTURING INDUSTRIES, 1935-1961, QUANTITY INDEXES, 1949=100

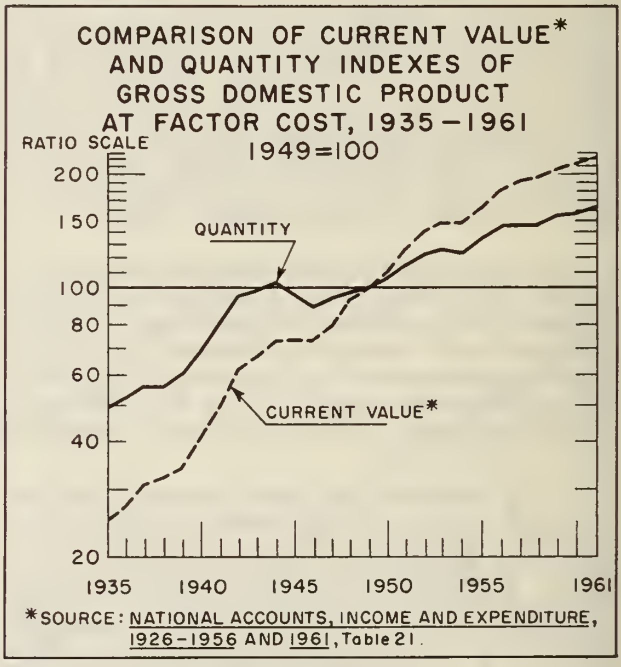
The above changes in production, distribution and demand have also influenced the level of employment in the various industries. As is well known, there was a considerable shift in employment during the post-war period from the goods- to the service-producing industries. A more detailed study, however, reveals that most of the loss took place in agriculture. From 1946 to 1961 employment in agriculture decreased its share of total employment from 25 per cent to 11 per cent, while total employment increased by approximately 30 per cent during the same period. Employment in the goods-producing industries as a whole remained at about the same level throughout this period, while employment in the service-producing industries increased from 39 per cent to 53 per cent of the total labour force. Thus services, in the early 1960's, absorbed a higher proportion of total employment than did the goods-producing industries.[9]

CHART-11



NON-DURABLE MANUFACTURING COMPARED WITH SELECTED COMPONENTS, 1935-1961, QUANTITY INDEXES, 1949=100

CHART-12



COMPARISON OF CURRENT VALUE* AND QUANTITY INDEXES OF GROSS DOMESTIC PRODUCT AT FACTOR COST, 1935-1961 1949=100

*SOURCE: NATIONAL ACCOUNTS, INCOME AND EXPENDITURE, 1926-1956 AND 1961, Table 21.

The gains in output since 1935 were accompanied by periods of rapid price increases, particularly following World War II and during the Korean war. Thus, the increase in value has been substantially greater than the increase in volume,[10] as is noted on the preceding chart. Price controls, imposed during World War II, were gradually relaxed and removed beginning in the latter part of 1946. A back-log of demand and an accumulation of savings had built up in the personal and business sectors of the domestic economy, and these, together with a high level of demand in the external sector, contributed to the substantial price increases in the immediate post-war period. Prices did not level off until 1949. With the outbreak of the Korean war in mid-1950, demand once again outpaced production and prices rose sharply over the next eighteen months. By 1952 prices had begun to level off again. In 1955 and 1956 prices rose once again but much less sharply than in the previously noted periods. The late 1950's and early 1960's were on the whole characterized by relatively stable prices.

---

[9] See *Indexes of Real Domestic Product by Industry of Origin, 1935-61,* Part IV, Table 8.

(To be continued in the next issue)

---

[10] Prices have both direct and indirect effects on the value and volume of production. An attempt to analyze structural changes in terms of constant dollar data alone would at best yield only a presentation of differential growth rates in a new guise, because the built-in weighting pattern of the base period does not allow for the full effects of price changes to be shown. Any compositional analysis, therefore, would also have to take account of the current structure of prices, otherwise the issue would remain inconclusive. The best that can be done, on the basis of the present industry-of-origin study is to compare current and constant dollar total Gross Domestic Product at factor cost.

INDUSTRIAL PRODUCTION (More detail in Table 11)

The index of industrial production advanced by 1.6 per cent in March. The strength was concentrated in non-durables and mining with both durables and electric power and gas utilities marginally lower during the month.

		total industrial production	manufacturing production			mining production	electricity and gas	total iron and steel

RETAIL TRADE, MOTOR VEHICLE SALES (More detail in Tables 48 and 76)

Retail trade dropped 1.5 per cent in March due primarily to declines in shoe stores, fuel dealers, men's and women's clothing stores offset in part by rises in the lumber and building material dealers.

Total sales of new motor vehicles increased fractionally in March due to higher sales in the commercial sector.

		retail trade total	retail trade (ex. motor vehicle dealers)	motor vehicle dealers	department stores	new motor vehicle sales			
						total	American type passenger	European type passenger	total commercial

	A				66.9	104.1	116.7

[1] Starting in January 1962, the data are not entirely comparable with earlier years because more centers are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

MANUFACTURING INVENTORIES, SHIPMENTS, ORDERS (More detail in Tables 36 and 37)[1]

Manufacturing shipments and new orders rose again in December while inventories and unfilled orders remained virtually unchanged. New orders in machinery and construction goods were up while shipments of primary iron and steel fell irregularly.

		all industries							
		owned inventories	shipments	new orders	unfilled orders	new orders machinery	new orders construction goods	shipments primary iron and steel	ratio of inventories to shipments

EXPORTS AND IMPORTS (More detail in Table 84)

Total exports in April were marginally lower than the previous month.
Total imports increased significantly on the strength of higher imports from United Kingdom, all other countries and United States.

		exports (including re-exports)				imports			
		all countries	United States	United Kingdom	all other countries	all countries	United States	United Kingdom	all other countries

---

[1] Gross National Product at market prices excluding accrued net income of farm operators from farm production. [2] Before dividends paid to non-residents; see also footnotes on Table 99. [3] Original data as in column 8, Table 80. [4] Data for total housing starts and completions are not affected by the area changes mentioned in footnote 1, page S-5.

PRICES (More detail in Tables 29, 30, 31, 82, 83 and 100)

The general wholesale price index rose fractionally in April.

The index of industrial common stocks climbed more than 4 per cent in the same month.

The consumer price index edged upwards in April. Food remained unchanged, durable goods decreased and prices of services and non-durable commodities increased slightly.

		wholesale general index	thirty industrial materials	export prices	import prices	industrial common stocks	consumer price index (1949=100)

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the seires. [2] Includes residual error of estimate. Source at bottom of Table 10.

---

[1] The data in Tables 17 to 27 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and domestic service. [3] Includes storage and communication. [4] Includes insurance and real estate. [5] Excludes public administration and defence and such community services as health and education. **Source: Employment and Payrolls, (72-002), D.B.S.**

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Industry values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] End of period. [5] Classified according to the Standard Industrial Classification. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [2] Rough cords of 128 cu. ft. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D.B.S. Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

[1] Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Excluding shipments for re-processing at maker's own plants. [3] Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings. **Source: Primary Iron and Steel (41-001), D.B.S.**

[1] Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. [2] The data on building permits are collected for 1,100 municipalities and individual figures are available on request. Some of the annual totals for 1960 and 1961 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. **Source: Building Permits (64-001), D.B.S.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1961, stands at 1,100, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D.B.S.**

---

[1] Footnote and Source are at Bottom of Table 63. [2] Starting in January 1962, the data are not entirely comparable with earlier years because more centres are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. [2] Planks and boards, flooring and square timber. [3] Hollow blocks including fireproofing and load-bearing tile. [4] For building insulation only [5] Figures cover the production of firms which normally account for 90 per cent of the total for Canada. [6] Includes concrete chimney blocks, up to December 1959. [7] Factory sales of firms which normolly account for 96% of total Canadian production. **Source: Concrete Products (44-002), Products made from Canadian clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board (36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Sales of Paints, Varnishes and Lacquers (46-001) and Trade of Canada, Imports (65-007), Exports (65-004), D.B.S.**

*See also Tables 30 and 31. [1] Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1961 are final prices. From August 1, 1961 to July 31, 1962, the western grain prices used in the index are final prices for oats and barley and initial prices for wheat. [2] Includes subsidy on hogs. [3] Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef. [4] Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. **Source: Coarse Grains Quarterly (22-001), Stocks of Meat and Lard (32-012), Index Numbers of Farm Prices of Agricultural Products (62-004), Livestock and Meat Trade Report, Dept. of Agriculture, D. B. S.**

[1] Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. [2] Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. [3] Annual data are monthly averages of crop year. [4] Includes eggs for hatching. **Source: Coarse Grains Quarterly (22-001), Wheat Review (22-005), and Trade of Canada, Exports (65-004), D.B.S.**

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted. [2] Includes stocks held by manufacturers, wholesalers and other warehouses. [3] The increase in percentage of capacity from October to November, 1960 reflects the fact that some mills worked more than the 25 days included in this formula as well as a reduction in total daily capacity from 171,000 hundredweight in October to 151,000 hundredweight in November. **Source: Grain Milling Statistics (32-003), Margarine Statistics (32-005), Quarterly Report on Processed Foods (32-007), D.B.S.**

[1] Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. [2] Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade. **Source: Retail Trade (63-005), D.B.S.**

[1] Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial instutions for which comparable data are not available. [2] Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. [3] Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. [4] Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. Instalment credit includes conditional sales agreements only. [5] Amount owing to oil companies, excluding commercial accounts. [6] Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. [7] Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

[1] As from January 1958 the indexes, the imports total and the "miscellaneous commodities" total exclude various non-commercial and special transactions previously included in our imports totals. For a more detailed explanation see Trade of Canada (Exports) 1960. [2] Includes pigs, ingots, blooms and billets, castings and forgings, ferro-alloys and rolling mill products. **Source: Trade of Canada, Imports (65-007), D.B.S.**

[1] Data in this table refer to railways with annual operating revenues of $500,000 or over. Monthly averages for 1960 and 1961 differ from the sum of the monthly data due to revisions which cannot be allocated by months. [2] Includes January to July interim payments related to recommendations of the Royal Commission on Railway Transportation. **Source: Railway Operating Statistics (52-003) monthly, (52-206) annual, D.B.S.**

[1] Revised series with coverage limited to business failures under the Bankruptcy and Winding Up Acts, excluding individuals not operating businesses as such. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002), D.B.S.**

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and undivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [6] Excluding Canadian day to day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of Canada savings bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. [10] Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

[1] Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks. [2] Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada. [3] Less total float, i.e. cheques and other items in transit (net). [4] At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about $140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date. **Source: Statistical Summary of Bank of Canada.**

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales. [1]The Canada totals by months for 1960 and 1961 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1960 and 1961 nor the monthly averages for 1961 have been revised to agree with the Canada total. **Source: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.**

Note: – The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (Excluding government-owned companies and incorporated co-operatives). [1] Includes Tobacco, Leather and Miscellaneous Manufacturing industries. [2] Includes Electric Power, Gas and Water Utilities. [3] Includes Community, Business and Personal Service Industries. [4] Includes Agriculture, Forestry, Fishing and Construction. *Corporation profits before taxes for the years 1959 onwards as published in "Corporation Profits" differ from those published in **"National Accounts – Income and Expenditure – Fourth Quarter and Preliminary Annual, 1962"** in that revisions made to the National Accounts data have not yet been incorporated into this series. **Source: Corporation Profits (61-003), D.B.S.**

A NOTE TO USERS

Changes in this issue:

(1) The seasonally adjusted data on Employment in Table 17 and page S-3 have been revised back to January 1958.

(2) The unadjusted data on New Motor Vehicle Sales in table 48 and the seasonally adjusted data appearing on page S-4 have been revised from January 1959 onwards.

(3) The raw and seasonally adjusted data on corporation profits before taxes by industries shown in table 99 have been revised back to the first quarter of 1959.

(4) The seasonally adjusted data on Consumer Credit Outstanding by quarters on page S-9 were revised back to January 1959.

(5) The seasonally adjusted figures on Commercial Failures on page S-9 have been revised starting with the first quarter 1955.

Annual Supplement:

The second volume of the Annual Supplement will appear shortly and will supersede Volume I distributed last year. It will contain the historical record and the latest revised figures adjusted and not adjusted for seasonality of all the series appearing in the S section of the monthly Review.

As formerly, it can be kept up-dated by referring to the current issues of the Review. The foreword in the Supplement will describe in more detail how it is to be used and its relationships to previous Supplements to the Review.

Annual Subscription: $5.00 — Single copies: 50c. each

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information Services Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

AN ANALYSIS OF INDUSTRY REAL OUTPUT TRENDS AND CYCLICAL BEHAVIOUR[1]

PART II

Economic Fluctuations, 1946 - 61

From the analysis of industry growth rates and long term trends in the previous section of this article, it was evident that there has not been uniformity of development within the twenty-seven year period under consideration. In fact, for most industries, developments seemed to fall naturally into two major periods: the period from 1935 to the end of World War II and the post-war period. During the first phase the war effort disrupted the normal economic process so that cyclical analysis becomes difficult. It is the post-war period, therefore, upon which discussion of cyclical patterns must be concentrated.

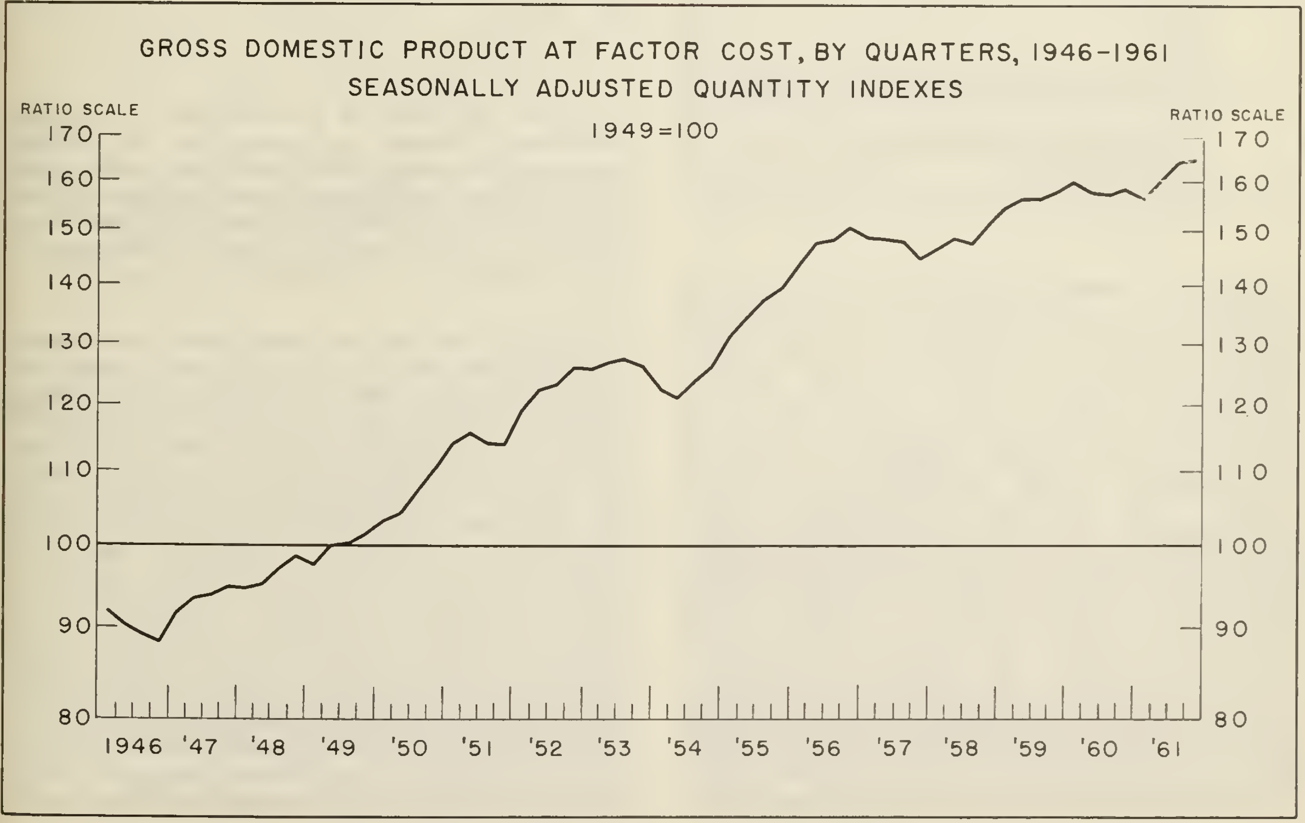
From an inspection of the real Gross Domestic Product data, as shown on Chart 13, it can be concluded that there have been three major production cycles during the post-war period. The downward phases of these cycles extended from the third quarter of 1953 to the second quarter of 1954 for the first cycle; from the fourth quarter of 1956 to the fourth quarter of 1957 for the second cycle; and from the first quarter of 1960 to the first quarter of 1961 for the third cycle. The expansionary phase of the first cycle extended from the third quarter of 1954 to the fourth quarter of 1956, while that of the second cycle lasted from the first quarter of 1958 to the first quarter of 1960. In the third cycle, production began to expand during the second quarter of 1961 and was still expanding at the end of that year. These specific timing patterns will be referred to throughout the industry analysis which follows.

Fluctuations in real Gross Domestic Product are the result of the combined changes in its various components. In order to analyze the aggregate movements therefore, it is first necessary to examine the cyclical fluctuations within individual industries.

---

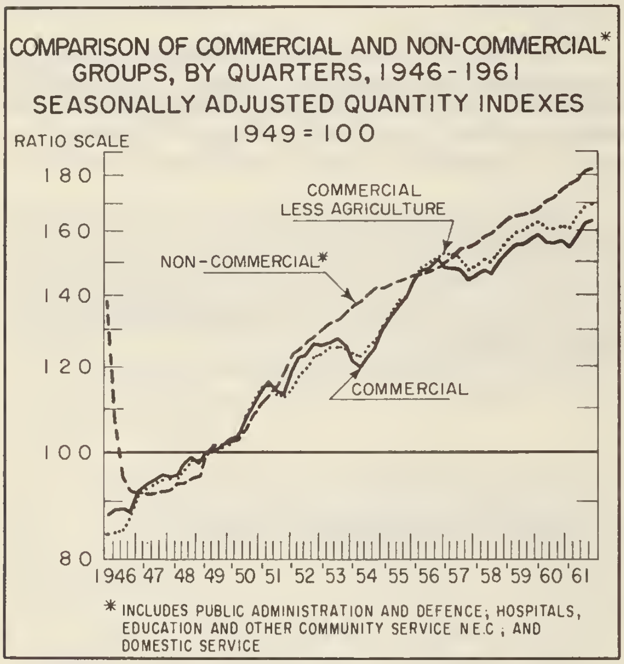
[1] Part I of this analysis appeared in the last issue of this publication and dealt with industry growth rates and long term trends in industrial output. The industry real output indexes used are published in *Indexes of Real Domestic Product by Industry of Origin, 1935-61*, a basic reference report recently released by the Dominion Bureau of Statistics.

CHART - 13



Some industries have very pronounced cyclical patterns, others show strong swings of an irregular nature, while the remainder follow a relatively smooth expansionary path. The first group can be expected to have the most pronounced influence on the timing, duration and magnitude of the fluctuations in the aggregate. The second group might either modify or accentuate some of the above tendencies, while the last group would generally tend to play a stabilizing role in smoothing the fluctuations in economic activity. It is this general criterion that will be used through the successive stages of disaggregating G.D.P. into groups of cyclically sensitive and cyclically insensitive industries.

CHART - 14

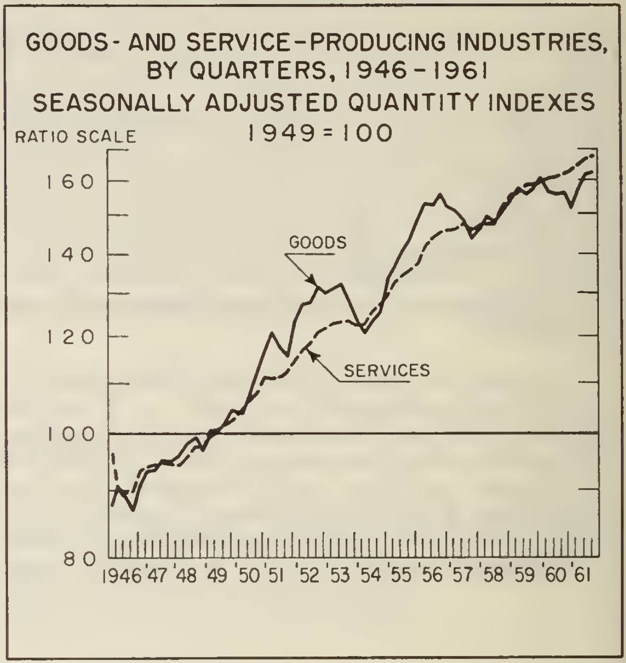


COMPARISON OF COMMERCIAL AND NON-COMMERCIAL* GROUPS, BY QUARTERS, 1946 - 1961
SEASONALLY ADJUSTED QUANTITY INDEXES
1949 = 100

* INCLUDES PUBLIC ADMINISTRATION AND DEFENCE; HOSPITALS, EDUCATION AND OTHER COMMUNITY SERVICE N.E.C.; AND DOMESTIC SERVICE

Chart 14 shows a breakdown of total production between the commercial and the non-commercial industry groups. As illustrated by this chart, it is the business sector of the economy which is particularly subject to cyclical changes. On the same chart, an attempt is also made to isolate the influences of the irregular fluctuations in agricultural production on the commercial sector of the economy. The inclusion of agriculture in most cases magnifies the amplitude of the cyclical downturn, as the years in which the three post-war troughs occurred also happened to coincide with particularly poor crop years. The effects do not appear to be so pronounced during the expansionary phase of the cycles. On the whole, the exclusion of agriculture seems to affect the level rather than the direction of movement of the aggregate. In only one instance does the exclusion of agriculture alter the timing of the cyclical turning point of the aggregate, namely during the second cycle, when the peak moves from the fourth quarter of 1956 to the first quarter of 1957. It can be seen, therefore, that neither the non-commercial nor the agricultural component of G.D.P. changes the general cyclical pattern of aggregate production.

CHART - 15



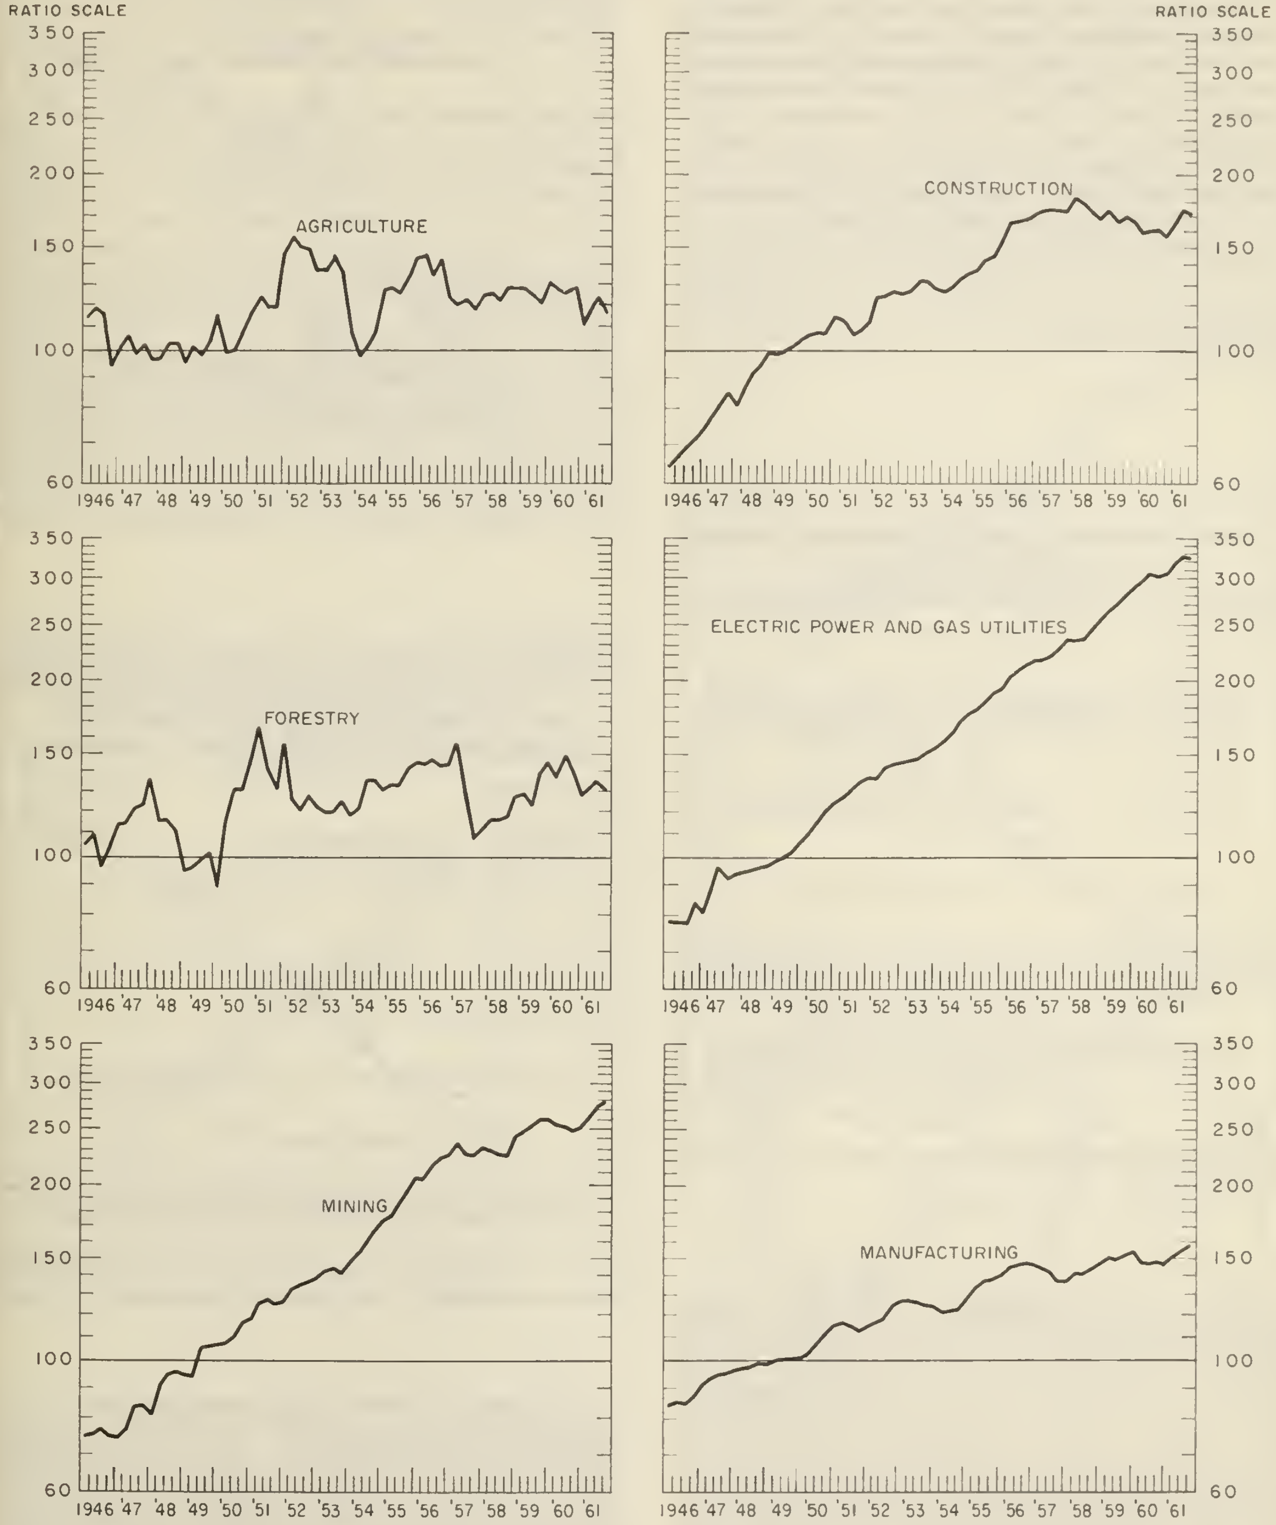
GOODS- AND SERVICE-PRODUCING INDUSTRIES, BY QUARTERS, 1946 - 1961
SEASONALLY ADJUSTED QUANTITY INDEXES
1949 = 100

Chart 15 points up the differences in cyclical movements between the goods- and the service-producing industries. On the whole, the former appear to have been considerably more volatile than the latter. Not all of the goods-producing industries, however, exhibit regular cyclical fluctuations, or fluctuations of the same severity and timing.

During the post-war period there were severe irregular movements in agricultural production, mostly associated with crop failures or with exceptionally good harvests. Forestry, which also was subject to sudden upward and downward movements resulting from changing demand conditions, failed to exhibit a distinct cyclical pattern. Mining, during the late 1950's, showed a more consistent cyclical development. Construction responded to changes in long-term investment projects, particularly in the area of resource development, rather more than to irregular or short-term business fluctuations. Electric power and gas utilities expanded rapidly during this period and, in times of general cyclical weakness, merely experienced a slowdown in the rate of growth. Of all the goods-producing industries, therefore, manufacturing shows the most clear-cut cyclical pattern, the timing of which coincides almost exactly

CHART - 16

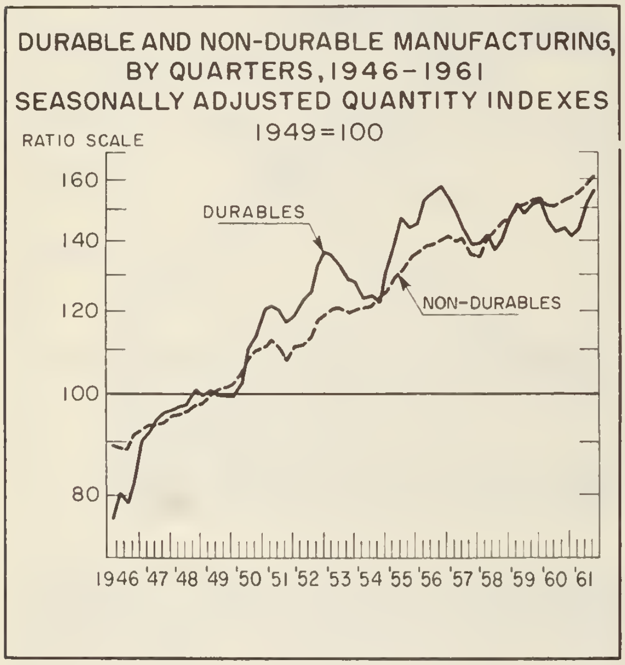
SELECTED GOODS-PRODUCING INDUSTRIES, BY QUARTERS, 1946-1961
SEASONALLY ADJUSTED QUANTITY INDEXES
1949=100



with that of total G.D.P. (in the first cycle there was a lead of one quarter in the downturn and in the second cycle there was a lag of one quarter in the upturn).

Manufacturing constitutes more than a quarter of total G.D.P. and therefore deserves a more detailed examination. Chart 17 shows a breakdown of total manufacturing production between durables and non-durables. Clearly, it is the durable manufacturing component that accounted for the pronounced cyclical pattern in total manufacturing. Except for the first cyclical downturn which was longer and more severe in durables and comparatively mild and short-lived in non-durables, the cyclical turning points in durables coincided with those in total manufacturing. The relative cyclical insensitivity of non-durables can, for the most part, be traced to the predominance of such steadily expanding components as foods and beverages.

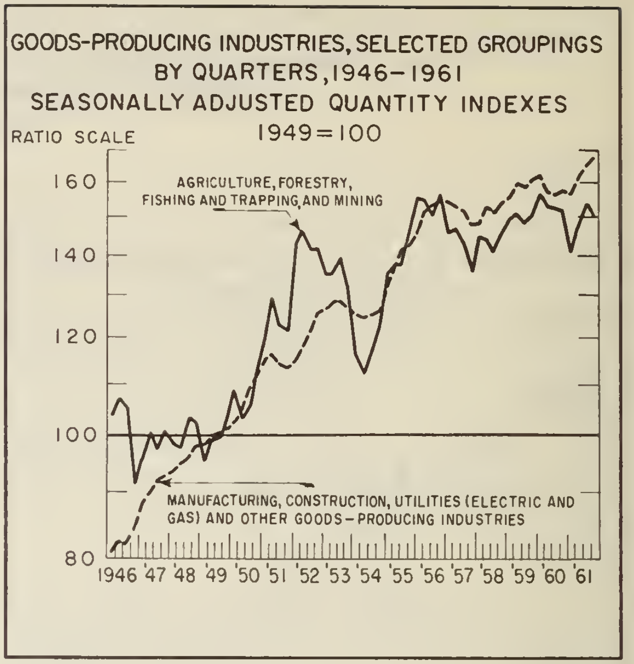
CHART - 17



DURABLE AND NON-DURABLE MANUFACTURING, BY QUARTERS, 1946-1961
SEASONALLY ADJUSTED QUANTITY INDEXES
1949=100

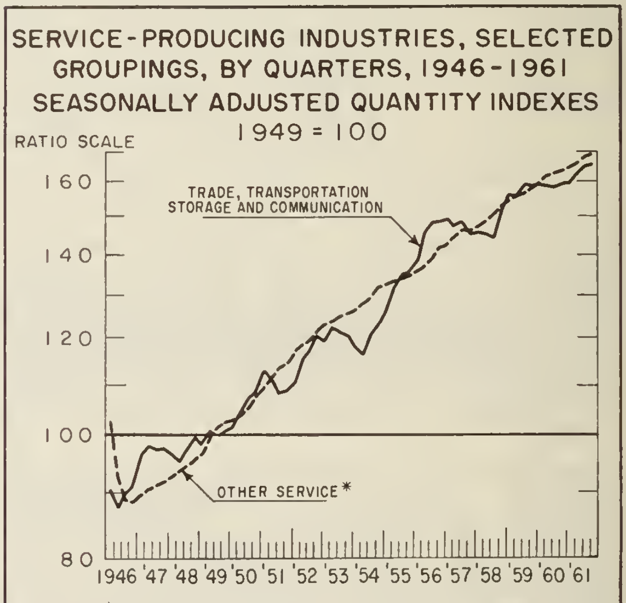
Chart 18 is an attempt to group the various goods-producing industries into aggregates which would make more apparent the underlying short-term expansion patterns within the economy. As noted earlier, the extractive industries have displayed rather frequent and often violent fluctuations of an irregular nature, while the remaining goods-producing industries exhibit more regular short-term fluctuations of smaller magnitude. It is also apparent from this chart that the latter group of industries has expanded considerably more rapidly during the 1946-61 period.

CHART - 18



GOODS-PRODUCING INDUSTRIES, SELECTED GROUPINGS BY QUARTERS, 1946-1961
SEASONALLY ADJUSTED QUANTITY INDEXES
1949=100

CHART - 19



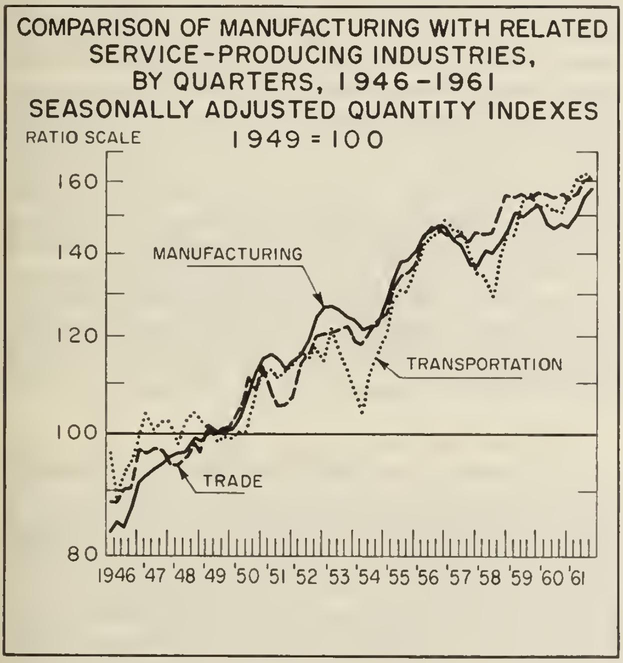
SERVICE-PRODUCING INDUSTRIES, SELECTED GROUPINGS, BY QUARTERS, 1946-1961
SEASONALLY ADJUSTED QUANTITY INDEXES
1949 = 100

* FINANCE, INSURANCE AND REAL ESTATE; PUBLIC ADMINISTRATION AND DEFENCE; COMMUNITY, RECREATION, BUSINESS AND PERSONAL SERVICE.

Chart 19 shows a similar disaggregation of the service-producing industries. Here the difference between the cyclical pace-setters and those industries which do not respond to short-term changes in business conditions is even more remarkable. The combined output of transportation, communication, storage and trade followed a cyclical pattern similar to that of manufacturing, both in the timing of the turning points and in the severity of the recessionary phases. The remaining service-producing industries, however, followed a smooth expansionary path which was steeper, especially in the late fifties, than that of the former industry group. Most of these remaining service-producing industries, therefore, fall into the group of cyclically insensitive industries. During the three post-war downturns they helped to sustain the level of economic activity.

The above examination of the cyclical fluctuations of major industries points to the preponderance of clear-cut cyclical patterns in manufacturing, transportation and trade. Chart 20 illustrates the similarity of these patterns, especially in the area of manufacturing and trade. Transportation was on the whole more volatile than the other two industries, with sharper relative declines during the recessionary phases of the first two post-war cycles. Transportation lagged manufacturing and trade by one quarter in the downturn of the second cycle, but began to decline one quarter earlier than manufacturing during the third cycle. Trade appears generally to have been the least volatile of the three series. During the upturns, however, growth in trade was as rapid as that in manufacturing.

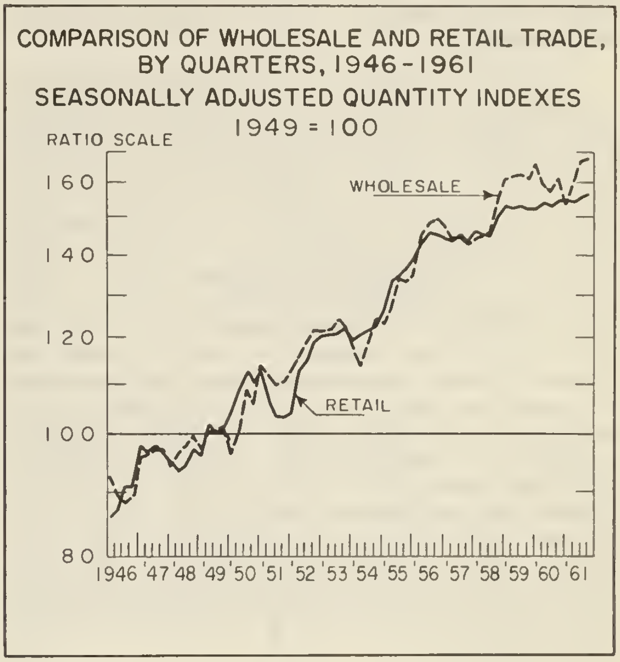
CHART-20



COMPARISON OF MANUFACTURING WITH RELATED SERVICE-PRODUCING INDUSTRIES, BY QUARTERS, 1946-1961
SEASONALLY ADJUSTED QUANTITY INDEXES
1949 = 100

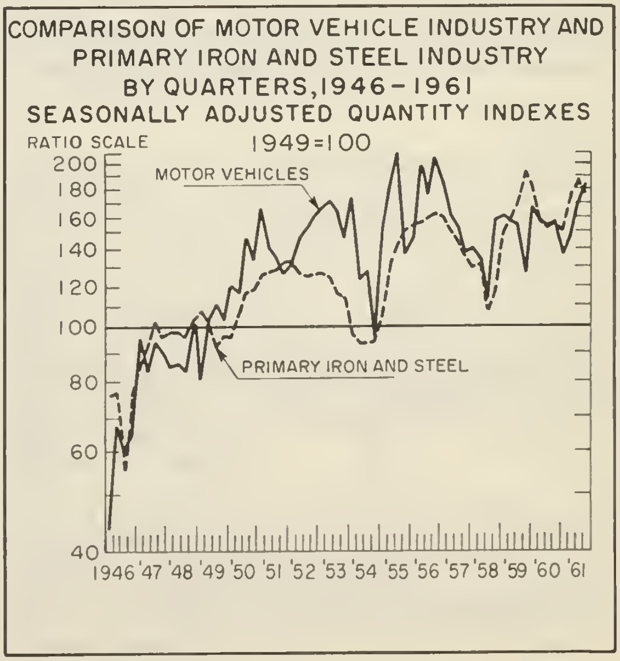
The close relationship between manufacturing and trade is even more apparent when total trade is broken down into its two components — wholesale and retail trade, as illustrated in Chart 21. The timing of the cyclical turning points in wholesale trade is, save in one case, identical with that in manufacturing. Retail trade is the less volatile component of this series and has exerted a modifying influence both during periods of contraction and expansion. It is interesting to recall in this connection the relative cyclical stability of non-durable manufacturing and the personal expenditure component of G.N.E., more particularly that of expenditure on non-durables. This behaviour pattern reflects the fact that consumers are strongly resistant to any lowering in their basic standards of consumption during recessionary periods.

CHART - 21



COMPARISON OF WHOLESALE AND RETAIL TRADE, BY QUARTERS, 1946-1961
SEASONALLY ADJUSTED QUANTITY INDEXES
1949 = 100

CHART - 22

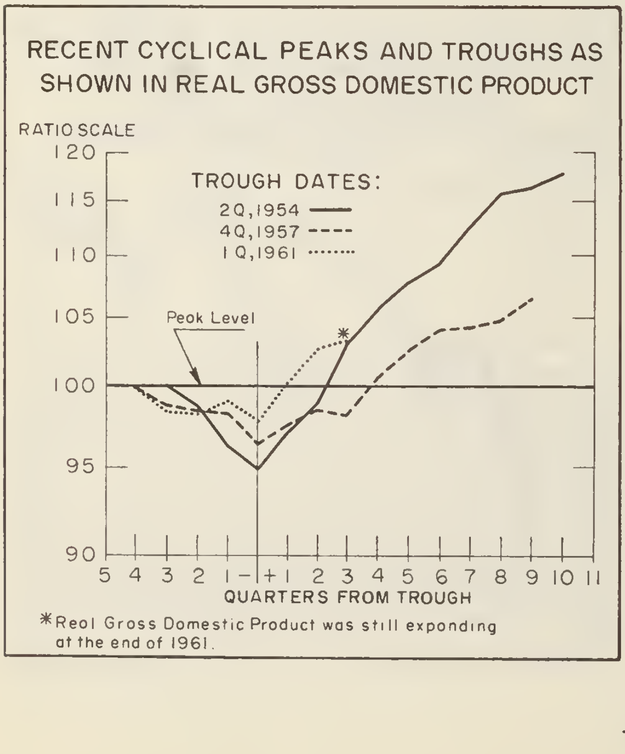


COMPARISON OF MOTOR VEHICLE INDUSTRY AND PRIMARY IRON AND STEEL INDUSTRY
BY QUARTERS, 1946-1961
SEASONALLY ADJUSTED QUANTITY INDEXES
1949=100

A breakdown of non-durable manufacturing shows that its foods and beverages component expanded steadily, clothing exhibited comparative stability with a decline since 1957, while textiles showed short-term movements, roughly coincident with the manufacturing cycle. Both clothing and textiles have been subject to strong competition from imports and changes in their levels of output cannot, therefore, be explained by considering only changes in domestic demand. However, the two industries serve as an illustration of the wide variety of factors and influences which determine the levels and shape the cyclical patterns of individual industries.

Chart 22 illustrates inter-industry dependence by showing the output of the motor vehicles industry along with that of one of its raw material suppliers — primary iron and steel. The similarity of the cyclical patterns of these two industries is apparent at a glance, indicating the sensitivity of both industries to general business conditions. Some points, however, are of special interest. During the steel strike in the United States in 1959, the Canadian motor vehicle industry was more dependent on Canadian steel, as were other industries, both in Canada and abroad. It can be seen from the chart that production of primary iron and steel did in fact reach a post-war peak during 1959 prior to the strike, while the production of motor vehicles declined. Following the strike production of primary iron and steel in Canada dropped sharply. It must be pointed out, however, that there was a strike in the Canadian iron and steel industry during the third and fourth quarters of 1958, so that the rapid expansion in 1959 may have been partially due to an attempt to rebuild depleted stocks.

CHART – 23



RECENT CYCLICAL PEAKS AND TROUGHS AS SHOWN IN REAL GROSS DOMESTIC PRODUCT

*Real Gross Domestic Product was still expanding at the end of 1961.

Chart 23 shows the three major post-war cycles in G.D.P., with the peak in each case made to equal one hundred. This is merely to facilitate a comparison of the relative severity and duration of the three cycles. As can be seen, declines tended to become more moderate with each successive cycle.[2] The downward phases of the last two cycles were longer by one quarter than that of the first cycle, but declines became increasingly milder. The recessionary phase of the first cycle lasted for three quarters, with a resultant contraction in output of 5 per cent. The downward phases of the second and third cycles were of a duration of four quarters each, with declines in G.D.P. of 4 per cent and 2 per cent respectively. The more moderate growth and shorter duration of the expansionary period of the second cycle combined to make the late fifties a period of lower rates of aggregate growth than those exhibited during the preceding period. The time period covered by the reference paper does not permit an analysis of the latter stages of the expansionary phase of the third cycle. During the first cycle, expansion proceeded for 10 quarters and, from trough to the following peak, G.D.P. increased by 24 per cent. During the second cycle, production expanded for 9 quarters but at a slower rate resulting in a 10 per cent gain.

As can be seen from the following table, the group of industries consisting of agriculture, fishing and trapping, and forestry, was the largest contributor to the declines in G.D.P., accounting for nearly two-thirds of the total decreases in each case. Manufacturing was the next major contributor. The effect of these decreases however, was partially offset by the steady increases of the "other service" group (see table) and, to a lesser degree, by the rapid growth of the electric power and gas utilities industries. Mining, which had exerted a sustaining influence during the first two downturns, declined in 1960-61, in contrast to the transportation, storage and communication group which increased during the latter period — largely as a result of expansion in the output of air transport, oil and gas pipelines and grain elevators.

For the majority of industries, as for total G.D.P., recovery was most vigorous during the first expansion, slowest during the second. Manufacturing was the most notable exception to this general pattern, insofar as its highest rates of increase occurred during the 1961 upturn, at which time it constituted the major single expansionary force. The only group of industries to have shown a steady expansion throughout the period was that consisting of finance, insurance and real estate, public administration and defence, and community, recreation, business and personal services. Especially during the second upturn, this group was among the largest contributors to growth.

---

[2] The interaction of long-run trends and short-run fluctuations tends to obscure the demarcation between these two elements of time series. Moreover, the time period under consideration is too short for the emergence of definite trends and patterns in production cycles.

TABLE 3. An Analysis of Industry Production Movements and Industry Contribution to Aggregate Change in Recent Cycles

	Downturns (peak to trough)			Upturns[1] (first three quarters only)		
	3Q '53 to 2Q '54	4Q '56 to 4Q '57	1Q '60 to 1Q '61	2Q '54 to 1Q '55	4Q '57 to 3Q '58	1Q '61 to 4Q '61
	Per cent change					
Gross Domestic Product	- 5.0	- 3.6	- 2.1	+ 8.4	+ 1.8	+ 5.3

Transportation, storage, communication	- 6.1	- 1.6	+ 2.3	+ 13.1	- 5.2	+ 3.3
Trade	- 3.0	- 2.6	- 1.5	+ 6.3	+ 1.6	+ 4.0
Other service[2]	+ 2.8	+ 3.3	+ 3.3	+ 3.0	+ 3.1	+ 3.0
	Industry contribution to change in G.D.P.[3] (per cent)					
Gross Domestic Product	- 5.0	- 3.6	- 2.1	+ 8.4	+ 1.8	+ 5.3
Agriculture, forestry, fishing and trapping	- 3.8	- 2.3	- 1.4	+ 2.8	+ 0.5	+ 0.4
Mining	+ 0.2	+ 0.1	- 0.2	+ 0.6	—	+ 0.6
Manufacturing	- 0.9	- 1.9	- 1.0	+ 1.5	+ 0.5	+ 1.9
Construction	- 0.3	+ 0.2	- 0.4	+ 0.5	+ 0.2	+ 0.5
Electric power and gas utilities	+ 0.1	+ 0.2	+ 0.1	+ 0.3	+ 0.1	+ 0.2
Transportation, storage, communication	- 0.5	- 0.1	+ 0.2	+ 1.0	- 0.4	+ 0.3
Trade	- 0.4	- 0.4	- 0.2	+ 0.9	+ 0.2	+ 0.6
Other service[2]	+ 0.7	+ 0.7	+ 0.8	+ 0.8	+ 0.7	+ 0.8

[1] In order to facilitate comparisons between the expansionary phases of the three cycles, the per cent changes refer to the three quarters immediately following each trough, as real output was still expanding at the end of 1961.

[2] This group includes the finance, insurance and real estate, public administration and defence and community, recreation, business and personal service industries.

[3] The columns may not add up to the total owing to rounding and because of the omission of the other goods industries component, the contributions of which are in most cases negligible. (This component consists of contract drilling, manufacturing repair establishments and municipal waterworks). It should also be noted that the industry contributions to the change in the aggregate can only be derived by using changes in weighted index points as the basis for calculations. In this way the effect on the total economy of changes in the output of each industry can be appraised.

Industry Developments in 1962

Since the time that the above analysis was written, quarterly indexes of real Gross Domestic Product by industry have been prepared for 1962. It might be useful therefore to summarize the more recent developments in production in order to determine to what extent the trends which seemed to emerge previously were continued into 1962.

The main strength of the expansion during 1962, as during the last three quarters of 1961, came from manufacturing and in particular from its cyclically volatile durables component. During the seven quarters following the first quarter 1961 low, manufacturing increased by 14 per cent, accounting for about one third of the 11 per cent gain in total real G.D.P. Transportation and trade continued to advance, with increases of approximately 8 per cent paralleling but not quite matching, the expansion in manufacturing. There was a slight deceleration in the growth of electric power and gas utilities and in construction, while the aggregate of the other service industries did not deviate from its path of steady expansion. Thus the only major change resulting from the inclusion of 1962 data was the sharp increase in agricultural production. This, largely because of the excellent crop in 1962, brought about a 21 per cent increase in the output of the agriculture, forestry, and fishing and trapping group, which amounted to almost one-fifth of the aggregate expansion.

The inclusion of the 1962 data, therefore, does not substantially change the pattern of development indicated by the earlier material. By and large, production exhibited a considerable degree of conformity to modes of behaviour established during previous upturns.

INDUSTRIAL PRODUCTION (More detail in Table 11)

The index of industrial production rose fractionally in April. A 1 per cent gain in mining coupled with a more than 2 per cent increase in electric power and gas utilities more than offset a fractional decline in manufacturing.

		total industrial production	manufacturing production			mining production	electricity and gas	total iron and steel
			total	durables	non-durables			
		1949 = 100						
1962	F	181.4	160.7	158.6	162.5	277.6	335.9	147.0

RETAIL TRADE, MOTOR VEHICLE SALES (More detail in Tables 48 and 76)

Retail trade decreased in April due to declines in most store types.
Total sales of new motor vehicles increased in April reflecting higher sales in all components.

		retail trade total	retail trade (ex. motor vehicle dealers)	motor vehicle dealers	department stores	new motor vehicle sales			
						total	American type passenger	European type passenger	total commercial
		million dollars

CONSTRUCTION (More detail in Tables 64, 65 and 60)

Total value of building permits increased in April in both the residential and non-residential sectors thus reversing last month's trend. Total starts of new dwellings advanced noticeably in May while starts of single family units were lower for the third consecutive month.

		value of building permits			new dwelling construction, centres 5,000 and over[1]

---

[1] Starting in January 1962, the data are not entirely comparable with earlier years because more centers are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

MANUFACTURING INVENTORIES, SHIPMENTS, ORDERS (More detail in Tables 36 and 37)

Manufacturing shipments and new orders rose again in December while inventories and unfilled orders remained virtually unchanged. New orders in machinery and construction were up while shipments of primary iron and steel fell irregularly.

	all industries							
	owned inventories	shipments	new orders	unfilled orders	new orders machinery	new orders construction goods	shipments primary iron and steel	ratio of inventories to shipments

EXPORTS AND IMPORTS (More detail in Table 84)

Total imports declined slightly in May reflecting lower imports from United Kingdom and "all other countries"; imports from United States showed a small advance.

Exports to all countries, United States and United Kingdom rose between April and May; exports to "all other countries" showed a small decline.

	exports (including re-exports)				imports

---

[1] Gross National Product at market prices excluding accrued net income of farm operators from farm production. [2] Before dividends paid to non-residents; see also footnotes on Table 99. [3] Original data as in column 8, Table 80. [4] Data for total housing starts and completions are not affected by the area changes mentioned in footnote 1, page S-5.

PRICES (More detail in Tables 29, 30, 31, 82, 83 and 100)

The general wholesale index rose in May, reaching the highest level since July 1951.

Both the indexes of thirty industrial materials and the industrial common stocks continued their upward trend in May.

The consumer price index was unchanged in May with fractional increases in durables, non-durables (ex. food) and services being offset by a half per cent decrease in food.

		wholesale general index	thirty industrial materials	export prices	import prices	industrial common stocks	consumer price index (1949=100)

[1] Prior to the census in 1961, population estimates were made quarterly on March 1, June 1, September 1 and December 1, and in addition on July 1 and January 1 of each year. After the 1961 census the quarterly estimates will be made on January 1, April 1, July 1 and October 1, as well as June 1. **Source: Estimated population of Canada by provinces at June 1, 1962 (91-201) D.B.S.**

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the seires. [2] Includes residual error of estimate. Source at bottom of Table 10.

[1] The data in Tables 17 to 27 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and domestic service. [3] Includes storage and communication. [4] Includes insurance and real estate. [5] Excludes public administration and defence and such community services as health and education. **Source: Employment and Payrolls, (72-002), D.B.S.**

[1] See footnote 1, Table 17. [2] See footnote 2, Table 17. [3] Employment indexes in manufacturing and in its durable and non-durable components are given in Table 17. [4] In addition to those listed, tobacco products, leather, printing and publishing and miscellaneous industries are included in non-durable manufacturing.

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Industry values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] End of period. [5] Classified according to the Standard Industrial Classification. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

[1] Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Excluding shipments for re-processing at maker's own plants. [3] Imports include, in addition to all other shapes, ingots, cast iron pipe, wire and wire ropes. Imports exclude castings (except cast iron pipe), forgings, fittings and couplings. **Source: Primary Iron and Steel (41-001), D.B.S.**

[1] Data refers to city proper for Port Arthur, Fort William, Regina and Saskatoon; in other cases to metropolitan area. [2] The data on building permits are collected for 1,100 municipalities and individual figures are available on request. Some of the annual totals for 1961 and 1962 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. **Source: Building Permits (64-001), D.B.S.**

[1] The coverage was extended to 507 municipalities in 1948, and as of 1961, stands at 1,100, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas and Urban Centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D.B.S.**

[1] Footnote and Source are at Bottom of Table 63. [2] Starting in January 1962, the data are not entirely comparable with earlier years because more centres are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. [2] Planks and boards, flooring and square timber. [3] Hollow blocks including fireproofing and load-bearing tile. [4] For building insulation only [5] Figures cover the production of firms which normally account for 90 per cent of the total for Canada. [6] Includes concrete chimney blocks, up to December 1959. [7] Factory sales of firms which normally account for 96% of total Canadian production. **Source: Concrete Products (44-002), Products made from Canadian clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board (36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Sales of Paints, Varnishes and Lacquers (46-001) and Trade of Canada, Imports (65-007), Exports (65-004), D.B.S.**

*See also Tables 30 and 31. [1] Excluding Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1962 are final prices. From August 1, 1962 to date, the western grain prices used in the index are initial prices only for wheat, oats and barley. [2] Includes subsidy on hogs. [3] Based on price for hogs including Dominion premium up to September 1960. A rise in ratio favours production of beef. [4] Previous to January, 1958, quotations referred to steers up to 1,000 lbs. Now they refer to all weights. **Source: Coarse Grains Quarterly (22-001), Stocks of Meat and Lard (32-012), Index Numbers of Farm Prices of Agricultural Products (62-004), Livestock and Meat Trade Report, Dept. of Agriculture, D.B.S.**

[1] Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Revised to include bagged seed wheat previously excluded. [2] Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. [3] Annual data are monthly averages of crop year. [4] Includes eggs for hatching. **Source: Coarse Grains Quarterly (22-001), Wheat Review (22-005), and Trade of Canada, Exports (65-004), D.B.S.**

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted. [2] Includes stocks held by manufacturers, wholesalers and other warehouses. [3] The increase in percentage of capacity from October to November, 1960 reflects the fact that some mills worked more than the 25 days included in this formula as well as a reduction in total daily capacity from 171,000 hundredweight in October to 151,000 hundredweight in November. **Source: Grain Milling Statistics (32-003), Margarine Statistics (32-005), Quarterly Report on Processed Foods (32-007), D.B.S.**

[1] Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. [2] Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade. **Source: Retail Trade (63-005), D.B.S.**

[1] Short term loans outstanding extended mainly but not entirely to consumers and for other non-business purposes, by selected financial institutions. The table does not include loans of trust and loan companies, second mortgage loans on residential real estate and loans of some other financial instutions for which comparable data are not available. [2] Conditional sale agreements held in connection with the financing of retail purchases of consumer goods. [3] Companies licensed under the Small Loans Act. Cash loans have no conditional sales contract but are usually repaid in instalments. [4] Excluded from the above tabulation are charge accounts of motor vehicle dealers whose credit is extended mainly to businesses rather than to consumers. Instalment credit includes conditional sales agreements only. [5] Amount owing to oil companies, excluding commercial accounts. [6] Includes loans fully secured by marketable bonds and stocks, home improvement loans, etc. Excludes loans to finance purchase of Canada Savings Bonds. [7] Figures for dates other than year ends are estimated on the basis of the loans by twelve companies.

[1] As from January 1958 the indexes, the imports total and the "miscellaneous commodities" total exclude various non-commercial and special transactions previously included in our imports totals. For a more detailed explanation see Trade of Canada (Exports) 1960. [2] Includes pigs, ingots, blooms and billets, castings and forgings, ferro-alloys and rolling mill products. **Source: Trade of Canada, Imports (65-007), D.B.S.**

[1] Data in this table refer to railways with annual operating revenues of $500,000 or over. Monthly averages for 1961 and 1962 differ from the sum of the monthly data due to revisions which cannot be allocated by months. [2] Includes January to July interim payments related to recommendations of the Royal Commission on Railway Transportation. **Source: Railway Operating Statistics (52-003) monthly, (52-206) annual, D.B.S.**

[1] Revised series with coverage limited to business failures under the Bankruptcy and Winding Up Acts, excluding individuals not operating businesses as such. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002), D.B.S.**

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and undivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [6] Excluding Canadian day to day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of Canada savings bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. [10] Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

[1] Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks. [2] Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada. [3] Less total float, i.e. cheques and other items in transit (net). [4] At September 30, 1957, the deposit balances of religious, educational and welfare institutions used for business purposes, about $140 million, were reclassified from "personal savings deposits" to "other notice deposits". The figures prior to September 30, 1957 are thus not comparable with those since that date. **Source: Statistical Summary of Bank of Canada.**

Note: This series gives total new settled-for ordinary insurance sales in Canada, exclusive of revivals, increases, dividend additions, reinsurance acquired and pension bonds without insurance. Totals are estimates projected from the sales reported by 32 companies operating in Canada representing 89 per cent of new ordinary insurance sales. [1]The Canada totals by months for 1960 and 1961 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1960 and 1961 nor the monthly averages for 1961 have been revised to agree with the Canada total. **Source: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Conn.**

Note: – The definition of profits before taxes is based mainly on the accounting definitions used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by a sample of all companies incorporated in Canada (Excluding government-owned companies and incorporated co-operatives). [1] Includes Tobacco, Leather and Miscellaneous Manufacturing industries. [2] Includes Electric Power, Gas and Water Utilities. [3] Includes Community, Business and Personal Service Industries. [4] Includes Agriculture, Forestry, Fishing and Construction. **Source: Corporation Profits (61-003), D.B.S.**
